Governing Fragmented Societies:
State-Building and Political Integration in
Chechnya and Ingushetia (1991-2009)

Abstract

My dissertation analyzes state-building and political integration in the two North Caucasian Republics of Ingushetia and Chechnya.

The study is to a large extent designed as a reaction to the mainstream claim that the degree of national consolidation and stability of these North Caucasian regimes are primarily a result of clan politics, i.e. political process where the main actors are pre-existing kin-based identity organizations. The task of this research was thus to assess the relative role of informal social structures in projects aimed at establishing and consolidating indigenous political units in the North Caucasus and to identify the principal internal reasons for the outcomes of these projects.

On the basis of long-term participant observation, interviews with experts, analysis of historical data and modern political processes this thesis argues that clans (teips) have seized to be patterns of political integration of any prominence in Ingushetia and Chechnya. As a result of demographic growth and social change brought about by colonization, Soviet modernization and frequent forced and voluntary resettlements, they lost their organizational structure and are incapable to mobilize members for action.

Five case studies show that although certain traditional institutions and practices still play an important role in the society, state-building is determined by struggle for power between socially heterogeneous groups that are driven by ideologies, programs, economic or military interests, and can be based on strong or weak ties. Five structural factors influence elite formation and state-building in the region: descent, kinship, territory, religion and ideology. The prominence of each of them is dependent on elite choices and the particular demands of the state-building project. Governments differ in how homogeneous they are, and how strong are the ties binding their members together. I conclude that the lack of checks and balances and a risk-prone environment increase the relevance of strong ties. I also show that the role of kinship in
structuring the elite and the determining the strength of ties within governments do not covary, despite the expectations to the contrary.

Acknowledgements

I would like to thank my supervisor Zsolt Enyedi without whom my return to academia would not have happened and this thesis would have never seen light. It is only due to his pedagogical wisdom, flexibility and strong faith in me that this project became possible. I am grateful to him for becoming an expert on Chechen and Ingush clans together with me and for illuminating discussions, which helped me shape out the argument. Special thanks for teaching me how to sketch graphs, for understanding and friendship.

I am very grateful to Matteo Fumagalli who joined my project at a later stage and was its most thorough, thoughtful and stimulating reader and critic. His guidance helped me develop the theoretical framework, elaborate argument, focus on methodology and structure. His encouragement and support helped me get till the end.

I am truly indebted to my friends and colleagues in Ingushetia and Chechnya, who helped me in my fieldwork, spent hours trying to explain me the logic of Vajnakh informal social institutions, drove me all around Ingushetia and Chechnya for interviews. I thank them for being frank and open about many sensitive issues that we have discussed and for making me warm and safe all the five years in the region. I am grateful to my interviewees for their stories and hospitality.

90% of the credit for this work goes to my mom. Her love and care kept me going.

Introduction
The Northern Caucasus has won the fame as the most tumultuous region in the Russian Federation. The political and economic changes which emanated in the late 1980s had extremely disruptive effects on the region and the last decade came forth as a distraught period of instability, conflict and war. Chechnya was among several other subjects of the Federation which challenged the state integrity in the early 1990’s and it came to be the only republic in Russia where a separatist movement ended in a full-blown war in 1994. Ingushetia, as many national regions of the USSR, was caught in an intense nationalist struggle for its own republican statehood, but it also slipped towards ferocious armed conflict with North Ossetia, the only armed ethnic conflict in post-Soviet Russia thus far.

Both republics suffered from high costs of economic transition, political difficulties associated with the collapse of the central authority, the necessity to construct new political institutions, deal with the new identities and past grievances, maintain functioning economies, infrastructure and law-enforcement. After the end of armed conflict in Prigorodny Region in 1992, the precarious political stability, slight economic recovery and remarkable regime consolidation were achieved in the Ingush Republic in 1994-2001; while in Chechnya state-building failed, and a second round of full-blown destructive military confrontation with Russia was provoked by Chechen militants, who invaded the neighboring Russian Republic of Dagestan in August 1999. Most observers explain the failures and modest successes of Chechnya and Ingushetia by the adversarial vs. accommodative patterns of their relations with the Russian Federal Center. A case in point is the conflict in Chechnya, which is predominantly analyzed as a continuous struggle of the Chechens and Russians over power and land. Fragmentation and the social complexity of the Chechen and Ingush societies, their late and uneven modernization are also included among the factors that destabilize politics in the two republics and impede effective state-building. The survival of primordial structures, such as teips (clans) is thought to have been accountable for
government failures and impotent policy-making in the region\textsuperscript{1}. The argument that clan structures play a pivotal role in the political process and that any effective policy-making should take into account the clan factor has become mainstream.

Although such explanations sound convincing, little or no research has been offered so far on what these primordial social structures are, whether they have transformed over time, how they function and interact with the state and which other formal/informal patterns of social interaction have played an important if not a conclusive role in the post-Soviet state-building in Ingushetia and Chechnya.

This Ph.D. thesis has two goals: to assess the relative role of kin-based, religious, ideological, territorial and political structures in projects aimed at establishing and consolidating indigenous political units in Ingushetia and Chechnya, and to identify the principal internal reasons for the failure and/or relative success of these projects. The attempts to create unified, effective, well-ordered polities in Chechnya and Ingushetia will be examined vis-a-vis a complex web of social interactions, practices and the multi-patterned dynamics of social integration within the political units.

The research is based on a set of explanatory case studies that aimed to provide theoretical propositions about interaction of informal patterns of social integration and state-building in the Northern Caucasus. The simplified theoretical model of the research design consists of the following elements: informal and formal patterns of political integration and state-building projects aimed at creating new unified polities. The interaction among these elements are expected to shape the consolidation of the new political regimes, the efficiency of elites, the role of weak and strong ties in the governments, and the degree of stability and state capacity in the analyzed regions.

Research Question and Argument

The study is largely designed as a reaction to the growing body of literature on clan politics in post-Soviet Central Asia and its application to the North Caucasus, which claims that the degree of national consolidation and stability of these regimes are primarily a function of the interplay between the state-building projects and the pre-existing primordial patterns of political integration, i.e. clans.

My research question is to explain whether and how informal patterns of social integration interact with state-building and influence elite formation; which are the factors that shape such interaction, and whether and how state-building outcomes are determined by it.

I contrast two models of state-building. One is based on trust networks and socially heterogenous groups driven by modern ideologies, programs and/or economic and political interests. The other one regards as protagonists the pre-existing organic social groups based on primordial bonds of real or fictive kinship.

My initial hypothesis was streamlined in accordance with the clan politics claim. I hypothesized that polity-building in Chechnya and Ingushetia was determined by interactions with clans. However, as a result of extended fieldwork, interviews with experts, analysis of historical data and of modern political processes this hypothesis has been refuted. The thesis argues that as a result of demographic growth and social change brought about by colonization, Soviet modernization, and forced resettlements clans (teips) have ceased to be patterns of political integration of any prominence. I further claim that informal patterns of integration still play a role in the society, and provide detailed bottom-up analysis of five patterns of social integration that are prominent in Chechen and Ingush societies: descent, kinship, religion, territory, and ideology. I explain the current functions of customary law and blood-feud and analyze how the socio-legal environment they create constrains the political choices of actors. I proceed by a top-down analysis of five state-building projects in Ingushetia and Chechnya, and conclude that none
of them was shaped by pre-existing patterns of integration, like clans. Each of the five regimes was driven by heterogeneous agency integrated on the basis ideology, program, economic, political and military interest. Thus, the thesis clarifies and sorts out much of the confusion related to the interplay of informal institutions and practices and their interactions with the state.

**Methodology**

My primary methods for the study of patterns of political integration, informal institutions and practices and their interaction with the state were ethnographic observation and interviews. A few weeks in the field were enough to establish that learning about clans from interviews and surveys was a rather difficult task. Issues related to kinship and family were considered the domain of private affairs which were not eagerly discussed. Moreover, some local intellectuals and the representatives of the political elite were reluctant to discuss the political relevance of tips with the outsiders seeing their very interest in this issue as an indicator of the scholar’s colonial mindset. Less educated respondents, typically, had very little understanding or experience of being interviewed about political matters for academic purposes, were suspicious of the interviewer, which made them, on the average, a bad information source.

To deal with this challenge I decided to use the ethnographic method of participant observation. I settled in the region, took up positions at a local NGO in Ingushetia and became a lecturer at history department of Chechen State University with a local salary and lifestyle. I shared flats with refugees in Nazran or stayed with Chechen families in Grozny, commuted by public transport (remarkable milieu for political debates), did shopping at local markets and hair-cuts at local saloons. Everywhere I talked to people. My job at human rights group Memorial involved working with victims of rights abuse in Chechnya, Ingushetia and Prigorodny Region of North Ossetia and required a lot of travel, sometimes to very distant high mountainous settlements. Moreover, it allowed me to observe certain families, villages, individuals in different situations
over extended periods of time. I have spent five years in the region and some of my knowledge of “how things work” is reflected in this dissertation.

My methodological choice in studying the role of teip and kinship in Chechen and Ingush societies was the following. In compliance with the Schneiderian principle, for four years I observed, without asking many questions. Having acquired certain knowledge of the societies, analyzed kinship terms and mapped kinship systems, I started my interviews.

First, I selected 20 Teips/ lineages (10 Chechen, 10 Ingush) for in-depth analysis from different areas of Ingushetia and Chechnya. I interviewed several members of each teip, from different settlements, of different age and when possible, gender. I asked them to tell the story of their teip, to show me their family trees, to explain how and under which circumstances they descended on the plain, how they settled in a particular village, tell their family histories, the story of their families in deportation, return, life after exile and describe their interactions with other teip members and kin members and with the village of origin, possible blood-feud episodes. An average interview lasted about two hours, the longest took seven hours.

Second, I studied several settlements (Achaluki, Gamurzievo, Kantyshevo, Ekazhevo villages in Ingushetia; Samashki, Gekhi-Chu, Shatoy, Zamaj-Yurt, Zumsoy villages in Chechnya) and tried to map clanship and kinship relations there and see the role of traditional institutions at the local level. I then talked with the representatives of different teips in this village to trace their story of the settlement and relationships within the village.

Third, personal networks used for acquiring access to jobs and scarce social goods were analyzed. For this purpose interviews with professionally active Chechens and Ingush have been carried out.

Overall I carried out over 100 in-depth interviews with politicians, experts, scholars, NGO workers, lawyers, former combatants, students of Islamic universities, journalists, Sufi and fundamentalist religious leaders, Elders.
I also repeatedly had a chance to discuss certain kinship-related issues with groups. These were often spontaneous conversations at tea or during lunch break or in a car during long trips around Ingushetia or Chechnya. Such talks were particularly inspiring because the interlocutors argued and contributed arguments to each other, brainstormed for examples, trying to explain certain issues to me. This was better than if I did focus groups, since with these individuals I had a relationship of trust and they were ready to give me important insider’s views. I think it helped a lot that I started my structured fieldwork after many years on the ground. I could ask informed questions, which helped the respondent to open up.

Following the ethnographic method developed by Valerij Tishkov, an influential Russian ethnologist, the head of the Institute of Anthropology and Ethnology of the Russian Academy of Sciences, I quote longer bits of interviews with my respondents to give them voice when they give relevant answers to the researched questions.

I also used historical research as evidence that the process of teip-dissolution was detected by ethnographers already in the 18-19th centuries, when the primordial institutions significantly transformed as a result of colonial wars, forced and voluntary resettlements that they entailed, state-building efforts of Imam Shamil and integration in the Russian Empire. Although the main focus of the thesis is the immediate past, a large part of dissertation is dedicated to prior historical analysis with the aims: to check the degree of historical tenacity of primordial institutions; to refute the argumentation of primordialists on their own ground; to indicate the plausibility of certain theories concerning the nature of the political processes and the identity of the real decision makers.

The analysis of the state-building projects and elite profiles mainly relies on secondary literature, newspaper publications, statistical data, and memoirs. I consulted a broad array of documents and statistics produced by governments, parliaments, courts and NGOs as well as did monitoring of the republican periodicals. The analysis of Ingush elites was done on the basis of monitoring of all issues of “Serdalo” and “Ingushetia” newspapers of 1992-2001 available in the libraries of
St Petersburg and Moscow, and mapping was carried out by comparing lists of teips, lineages and places of residence, when necessary verified with representatives of these teips. I am grateful to Ingush ethnographer Dr. Makka Albochacheva of the department of Caucasus at the Museum of Anthropology and Ethnography of the Russian Academy of Sciences and Ingush historian Dr. Nurdin Kodzoev of the Ingush Research Institute for Humanitarian Sciences for checking and correcting this part of the study.

My approach in this thesis is to tackle the problem by bringing together different disciplinary literatures that are relevant for advancing my argument but are almost never brought together in a sustained discussion of the topic. I am confident that each discipline independently will not be able to adequately address the research questions. I use history, anthropology, ethnography, law and political science to explain the state-building and political integration in Ingushetia and Chechnya in 1991-2009.

The empirical chapter of this research has a subsection which deals in more detail with the methodological challenges of the conducted fieldwork.

Dissertation Outline

The dissertation has eight chapters. Chapter 1 presents the theoretical framework for studying state-building and social integration and reviews the main concepts and terms of the thesis. My analytical framework draws on classical and contemporary literature on state-building, theories of modernization, democratization and consolidation but argues that since this body of literature is focused on formal institutions and Western models of development, it is insufficient for the analysis of late-coming, unevenly modernized and fragmented societies. I discuss relevant anthropological studies on kinship, trust networks, risk, strong and weak ties and the post-Soviet informal political practices and the Russian „economy of favors“ . My conceptual framework is closest to the „state- in- society“ approach developed by Joel Migdal, which looks at the state as
one of the society’s organization, but it argues against clan politics literature, developed within this approach.

Chapter 2 discusses political order and political integration in Ingushetia and Chechnya in pre-Soviet times. It focuses on the key developments such as the Caucasian war, state-building efforts by Imam Shamil, attempts of the Russian Empire to enforce state on the Chechen and Ingush communities and analyzes the way the primordial and informal structures got eroded (teips) or established (Muslim brotherhoods) in response to colonization and these state-building efforts. Chapter 3 analyzes the sweeping social change brought about by the Soviet modernization programs, which contributed to further erosion of primordial structures; and Soviet repression- from Stalinist exile to post-deportation limitations on settlement, employment and practice on faith, which conserved certain informal institutions and practices. It also deals with the three types of memories which Chechens and Ingush share regarding their past within the Russian state, which have had a profound impact on the political processes in 1991-2001.

Chapter 4 summarizes the results of my ethnographic study of patterns of social and political integration in Ingushetia and Chechnya, analyzes the current function of informal institutions and practices, evaluates their relevance in the political process. I argue that teips have ceased to be social organizations, their decision-making mechanisms and channels of communication have lost efficiency, their social functions are limited to the sphere of ritual and settlement of family disputes. However, they do survive as containers of identity of some relevance, especially for ethnocentric men. I argue that four other patterns of integration are not less, but even more important - kinship, territory, religion, and ideology. Together with personal networks of acquaintances, colleagues and friends these five social pillars constitute individual’s “inner circle”, which she uses when necessary for getting employment or acquiring social goods. The same five patterns of social integration can be considered as factors that influence elite formation. The prominence of each of the factors in a given elite is determined by the choices of the governmental elite and by the demands of specific state-building projects.

The case studies are built up as follows. First I describe the socio-political processes (movements and conflicts) which gave birth to the specific polity-building projects and/or determined their initial conditions. These sections are important for providing context within which the state-building projects unwrap, for characterizing the agency involved and constraints or possibilities available to the particular government.

The second bloc analyzes the state building projects themselves, with the focus on the newly created institutions and on the elite efforts at achieving consolidation. The principal areas investigated are the following: economy, education and health care, law enforcement, armed forces, legal system, infrastructure. By analyzing the state-building efforts I scrutinize problems and challenges involved, evaluate successes and failures as well as factors which determined the outcomes. In all of the three cases I conclude that clan structures have no role in shaping the outcomes.

The third part reviews the principal challenges to the regime (both the formal opposition and the informal groups), discusses issues of disagreement or the crises faced by the governments and analyzes their responses to these crises. Each case study contains a section assessing the role of informal actors, the interaction between formal politics and informal patterns of political integration, institutions and practices.

Chapter 8 analyzes Chechnya and Ingushetia under the predatory regime of Murat Zyazikov and sultanistic regime of the Kadyrovs.

The case studies illustrate that pre-existing patterns of social integration (clans, tariqas, and virds) do not play any significant role in the process of state-building in Vajnakh societies. The political process is shaped by agency, integrated on the basis of ideology, program, religion or
economic and military interests. Moreover, the strength of ties in the elites does not covary with kinship despite the expectations to the contrary. The case studies show that institutional constraints and political contexts shape the relevance of strong ties in the governmental elites.

1. Governing Fragmented Societies: Late State-Building and Social Integration

In this chapter I outline social science approaches to the problem of late state-building and its interaction with informal patterns of social integration. I contrast two models of state-building. One is based on trust networks and socially heterogenous interest groups driven by modern ideologies and/or economic and political interests. The other one regards the pre-existing organic social groups based on primordial bonds of real or fictive kinship as the protagonists of state-building. I claim that although descent and kinship are important patterns of social integration in the Chechen and Ingush societies, they do not form the basis for political integration. In other words the first model is superior to the second one in helping us to understand political processes in the region. I start the chapter by formulating the analytical problems tackled in the conducted research, and by introducing the principal concepts and definitions of the dissertation. I proceed by reviewing the main bodies of literature this thesis draws on, argues with or contributes to.

In formulating my conceptual framework I generally follow the „state in society“ approach developed by Joel Migdal, which looks at the state as one of the society’s organization. My research argues against the clan politics literature on Central Asia and Caucasus by questioning its basic tenet that kinship is the main pattern of political integration in the region. I incorporate insights from the anthropological literature regarding the methodology of researching kinship, nature and structure of kinship ties, their biological and fictive aspects, boundaries and filiations between descent and kinship groups, links between descent and territory. I further review relevant arguments in classical and contemporary literature on state-building, theories of moderzination, democratization and consolidation which deal with the problems of state-building in the framework of modernization, installing democratic institutions and achieving regime
consolidation. I discuss the important contributions offered by this stream of research but argue that it is too focused on formal institutions and Western models of development, and it is therefore insufficient for the analysis of non-Western, late-coming, unevenly modernized fragmented societies. I concluded by discussing relevant studies on trust networks, risk, strong and weak ties and the post-Soviet informal political practices and the Russian „economy of favors“.

1.1. Late State-building and Social Integration: Analytical Problems and Concepts

“The state is undeniably a messy concept” was the encouraging statement opening Michael Mann’s voluminous study on States, War and Capitalism. Although thousands of pages have been written on state, experts still can hardly agree on what the state is. They do agree on what it is not: ‘The state is not an eternal and unchanging element in human affairs. For most part of its history, humanity got by…without a state” (Pierson 1996: 35). Societies had power structures well before states developed.

These political power structures were designated according to traditional rules and were obeyed due to the sacredness of their status (Weber 1995: 42). The rule of gerontocracy (power of elders, understood literally as the eldest in years and most familiar with the traditions) and primary patriarchalism (a rule of a particular individual in an extended family or kin group) are good examples of the political power which came prior to the power of state (Weber 1995: 43). The authority of these structures was backed up by legal codes: a rich variety of social control, social pressure, customary law and judicial procedure (Merry 1992:131).

The power structures and legal codes of pre-modern societies were never cohesive. According to Migdal, “through most of human history, territories have hosted a diversity of rules of the game—one set for this tribe and another for a neighboring tribe, one for this region and another for
that… Social control has not been of a piece, but it has frequently been highly fragmented through a territory”. (Migdal 1988: 275).

The power structures of stateless societies came to be threatened with the emergence of the traditional state, which aimed to submerge them under its own compulsive control, but the pre-modern state’s penetration was low, the degree of local autonomy high; the state was rather, following Abrams, a ‘unified symbol of an actual disunity’ than a general factor of cohesion (Abrams 1988). Especially true this was in respect of the multinational empires, where traditional power structures of conquered or annexed peoples and territories were left relatively intact².

It was only the modern state organization which achieved a high degree of efficiency and penetration into the society. It added routine, formalized, rationalized institutions which outreached the entire territories of the state (Weber 1978:54-56). The states gradually expanded their power: regular taxation, a monopoly over mobilization, permanent bureaucratic administration, a monopoly over violence, law-making and law-enforcement (Mann 1995:325). To fulfill those functions the modern state tried to submerge all competing power centers and establish monopoly over making of rules.

In no way was the process of crystallizing the modern state power smooth. Historically, emerging states were sprawling organizations within societies that coexisted with many other formal and informal organizations of social power, from kin groups to tribes and religious organizations (Migdal 1987:396). The state elites sought predominance over these organizations, and fought fierce struggles for monopoly over making and implementing binding rules (Migdal 1987:397). Modern European states with their deep penetration and high degree of authority over social groups were results of a long process of integration of various social segments into a cohesive political unit (Weber 1978:54-56). State-building was a dialectical process: brief periods of sweeping change were followed by longer periods of adjustment and absorption, when accommodations to these changes could take place (Khoury and Kostiner 1990: 17).

² For example, the Ottoman Empire introduced a system of self-governing millets, distinct cultural and religious communities, the Russian empire established indirect rule, and pursued assimilation of its colonized peoples by means of long-term administrative adaptation and migration.
In the present study I understand *state-building* as the process of creating effective government, which involves the monopoly over authoritative binding rule making, rule enforcement and violence within the territory claimed by the state. Concerning *modern state* I adopt Michael Mann’s definition as developed in his *States, War and Capitalism*:

“A differentiated set of institutions and personnel embodying (2) centrality in the sense that political relations radiate outwards from a center to cover (3) a territorially demarcated area over which it exercises (4) a monopoly of authoritative binding rule-making, backed up by a monopoly of the means of violence” (Mann 1992:4).

Following this definition when speaking of the modern state, I will mean a political unit which is: 1) territorially centralized 2) possesses monopoly over decision-making (i.e. it enjoys recognition of being a final and absolute authority in the political community, with a proviso that no final and absolute authority exists elsewhere (Hinsley 1986:26) ) 3) has the monopoly over the means of violence insofar as the citizens believe that the state is the only agent with a legitimate right to use force for maintaining its order 4) is a central location of institutions which are multiple and functionally differentiated.

But state does not equal *modern* state. Late coming states often do not meet one or several of the above mentioned criteria, since they operate in *fragmented societies*, which can be defined as weakly homogenized and loosely integrated societies, with strong informal patterns of social integration which follow their own binding rules and do not recognize state’s monopoly over justice and violence. Following Migdal, I understand the modern state to be the culmination of a process transcending these localized patterns of social integration in societies, which had previously made the rules (Migdal 1994: 12).

This thesis relies heavily on the concept of *pattern of social integration*, by which I mean a set of identities, practices and power structures which dominate the behavior of certain social groups and create special social subsystems within the society. A pattern of social integration requires an institutionalized power structure and a common identification on behalf of its social group. I
will argue that different patterns of integration co-exist in the three following ways: *compartmentalization, competition and symbiosis*. *Compartmentalization* results in a closed subsystem which is following its pattern-specific logic, *competition* implies the rivalry between various integrative logics at stake. *Symbiosis* is a peaceful blender of various patterns (eg. customary law, Muslim law and secular law co-existed in the North Caucasian Republics in the communist times).

Patterns of social integration can be more or less institutionalized. Based on the knowledge of the local context and the findings of my fieldwork I claim that five patterns of integration are the most prominent in Ingushetia and Chechnya: descent (patrilineal lineage or segment of lineage), kinship, territory, religion, ideology. I define ideology in the broadest sense: agreement on politically relevant ideas (about nation, family, economic policy, independence etc). Since these republics were at crossroads after the collapse of the Soviet Union it is not surprising that such differences, particularly concerning independence and the nature of the new regime, polarized people at many levels. This thesis does not research friendship as a pattern of social integration, which is a prominent category, but since it does not have its own logic (you can be friend with someone for a myriad of different reasons), moreover friendship has nothing to do with the socio-political structure of the society - as opposed to the others identified above. In my final model, however, I account for friendship and other patterns of integration, grouping them under the category of ‘other’.

It is usually thought that in politics non-state patterns of social integration clash with the state integrative logic. Especially true this is, as Geertz argues, for the patterns of political integration based on primordial ties. ‘One is bound to one’s kinsman, one’s neighbor, one’s fellow believer, *ipso facto*, as the result not merely of personal affection, practical necessity, common interest, or incurred obligation, but at least in great part by virtue of some unaccountable absolute import attributed to the very tie itself’ (Geertz 1987:31). The primordial political patterns of integration are of the same order as state power, they consider themselves as ‘possible self-sustaining,
maximal social units, as candidates for nationhood’ (Geertz 1994:32). Informal institutions can indeed obstruct the functioning of formal institutions and create problems, but they can also enhance the effectiveness of state-institutions by providing solutions to problems which cannot be remedied within the formal framework. At other times informal institutions can reinforce or even substitute the formal institutions which they appear to undermine (Helmke and Levitsky 2004:728).

According to Migdal, interrelations of state and social organizations can produce four ideal-types of results: (1) total transformation of patterns of social integration by the state; (2) accommodation of patterns of social integration by the state; (3) incorporation of existing social forces by state; (4) incorporation of the state by social forces (Migdal 1988:25).

Most subtle and unexpected patterns of political change result from the accommodation between states and other powerful organizations in society (Migdal 1988: 31). Incorporation of local components of the state may affect the state’s overall coherence- the ability to relocate resources, establish legitimacy and achieve integrated domination (Migdal 1988: 25).

In this project I will deal with the cases of late state-building in fragmented societies, which are considered to be marked by the existence of strong non-state patterns of social integration, with their own self-government logic and authoritative binding rule making, established mechanisms of adjudication and rule enforcement. I will look into how the state and social organizations accommodated, blended, marginalized, crashed or captured each other and how this has affected the process of political unification.

I use the term ‘state’ in its sociological meaning, as one of the social organizations within a given society. I speak of state-building, notwithstanding the fact that in Ingushetia and in Chechnya after 2003 the state-building projects were carried out within the framework of the Russian federal state. In this way it becomes possible to analyze the building of effective
governments in societies that in early 1990s created fundamentally new polities, based on new Constitutions, new identities, new institutions, and legitimizing procedures.

Decentralization in Yeltsin's Russia was unprecedented, and following the famous Yeltsin's encouragement, “swallow as much sovereignty as you can” the national republics enjoyed substantial autonomy. Chechnya was de facto independent and pursued its state-building project without involvement of the federal authorities. Moreover, the political elites and the societies in Ingushetia and Chechnya widely perceived the post-communist time as the period of building „statehood“ (gosudarstvennost’). Thus, in the present study the the polysemy of the term state is reduced to its purely sociological meaning. Other meanings, especially those common to the theory of international relations, are not considered.

1.2. State-Building: State-Centered Perspectives

“For by art is created that great LEVIATHAN called a COMMONWEALTH, or STATE ...is but an artificial man, though of greater stature and strength than the natural, for whose protection and defence it was intended; and in which the sovereignty is an artificial soul.. the magistrates and other officers of judicature and execution, artificial joints; reward and punishment (by which fastened to the seat of the sovereignty, every joint and member is moved to perform his duty) are the nerves,... pacts and covenants, by which the parts of this body politic were at first made, set together, and united, resemble that fiat, or the Let us make man, pronounced by God in the Creation”. Thomas Hobbes, The Leviathan

Since 1660 and until recently philosophy and social science tended to treat the state as a holistic, autonomous structure, which exists above the societies and is distinct from them. The founding fathers of social science – Durkheim, Marx and Weber linked the emergence of modern state to high diversification of labor, industrialization and capitalism which resulted in unprecedented centralization of modern societies.

Durkheim argues that the state has an autonomous role of providing moral guidance to the society, and as the society develops the significance of state’s functions expand. Durkheim’s
theory of historical evolution of humanity from mechanical solidarity of primitive societies to organic solidarity of modern societies is a process determined by the structure of the division of labor. In pre-industrial societies, social organization is highly undifferentiated, characterized by similarity of functions, collective sentiments, common consciousness saturated with religious ideas and sanctioned by law, which is repressive and diffuse, imposed not through specialized institutions of justice but by the whole society (Durkheim 1964 37-39, 56, 76).

The division of labor and social differentiation results in a society with high level of interdependence, where solidarity through social similarity is replaced by solidarity through difference and strengthening of social bonds. This society however, has to be regulated and organic solidarity upheld by a strong moral authority of the state which imposes itself on its different members. To become states, therefore, primitive societies must undergo tremendous change, reconstruct and reconceptualize their social relations (Durkheim 1964).

For Marx modern state is a class state, governed by egoism of private property, and interests of the bourgeoisie. However, the state is always more than agent of one class, through the emancipation of private property from the community, the state has become a separate entity, beside and outside civil society and is identified with the realm of alienation founded on the contradiction between general and particular interests. In German Ideology Marx describes the historical evolution of the modern state in terms of mode of production and increasingly specialist division of work which result in emergence of the separate spheres of administration (Marx and Engels (1933) 1964).

Capitalism destroys personal ties of pre-industrial modes of domination, leaving only naked self-interest as the bond between individuals. In his analysis of Bonapartism Marx attempted to show that the state was not a simple reflection of social forces, but rather an example of the separation of the state from society, where the state seems “to have made itself completely independent” of all classes and soars “high above society.” (Marx 1852)
Both Marx and Durkheim considered their analysis of modern societies and states to be of quite general significance and they predicted that the social dynamics within later modernized societies would be similar to those observed in Western European countries.

Max Weber’s fundamental contribution to the theory of state is the concept of rational-legal bureaucracy, which is the result of centralizing trends in modern industrial society. In modern societies the administration of mass structures is radically different from personalized administration in small associations. The highly specialized division of labor in modern capitalist or socialist economies must inevitably lead to greater bureaucratization from above - technically superior administration, larger-scale planning and resource management.

Modern state officials are personally free and are functionally constrained by their impersonal bureaucratic obligations. Legal rational bureaucracy eliminates all personal, irrational and emotional elements from administration. The state and bureaucracy are increasingly autonomous of civil society and play a crucial role in molding of its institutions (Weber 1954, 1964). At the same time Weber dedicated significant attention to the sociological determinants of politics: the role of religion, patterns of leadership and legitimacy in modern states (Weber 1930, 1951).

Continuing the Durkheimian line of inquiry into the problems of social evolution, modernization theories of 1960s/70s analyzed the perspectives for traditional societies to follow the advanced industrialized countries of the West in achieving of the economic prosperity and social progress. According to scholars working within this paradigm, modernization involved major social reconstruction - traditional societies had to drop their archaic customs and agrarian lifestyle and turn towards technology, education, and open systems of government.

Walt Rostow proposed a five-step model of economic growth and social development, which traditional societies have to go through before reaching the age of developed capitalism and mass consumption (Rostow 1960: 4-16). A traditional society has limited production functions, is based on pre-Newtonian science and technology, and on pre-Newtonian attitudes towards the physical world. Sometimes productive innovations could be introduced in a traditional economy,
but in such societies a ceiling exists on the level of each individual development, since modern science and technology are not systematically applied. During the stage of “preconditions for take-off”, the level of education goes up, the class of businessmen and manufacturers develops. During “take-off” the sector-led growth moves the economy toward “drive to maturity” when economy diversifies, economic sectors level off, standards of living go up until the society reaches the period of contemporary comfort, which Rostow calls “the age of high mass consumption” (Rostow 1960:4-16). Rostow’s influential model is linear and conceived as generic, applying to all modernizing societies, albeit for each of them each stage would take a different time.

Alex Inkels and David Smith in their seminal sociological study “Becoming Modern” try to investigate which conditions were conducive to modernization at the level of individual consciousness. Having interviewed 6,000 men in modernizing countries of Israel, Chile, Bangladesh, India, Argentina and Nigeria Inkels and Smith found out that education appears to be the most prominent factor shaping a person’s modernity along with work in large-scale enterprises, such as factories. Surprisingly urbanization was not conducive to individual modernism, neither was quality of education, but rather amount of time that individuals spent at school (Inkels and Smith 1974). David McClelland likewise researched the individual aspects of modernization, arguing in his “Achieving Society” that economic growth and decline should be explained by internalized values of achievement, success, spirit of invention and innovation (McClelland 1967).

For Daniel Lerner modernization is equal to Westernization, even though the elites of newly modernizing societies often reject such an association. Urbanization, industrialization, literacy and prominence of media, along with changed behavioral patterns—physical mobility, voluntary participation, empathy, which stipulates an “inner mechanism which enables newly mobile persons to operate efficiently in a changing world,” are necessary for the passing of the traditional society. Lerner acknowledges, however, that sometimes “the societies- in-a hurry” do
not follow the Western path of development. For instance, they may install a voting mechanism and seemingly democratic institutions, which are in fact nothing more than a fad, not corresponding to the internal needs of a participant society (Lerner 1958).

The modernization theory analyzes social transformations from pre-modern, pre-Newtonian world to modern urban, socially mobile, secular and democratically governed societies. It provides useful insights into how urbanization, literacy, mobility, diversification of labor transform lifestyles and communal ethos. In this thesis I will follow the main premise of modernization theorists that social institutions transform with the advent of modern economy, cities and education. At the same time, I subscribe to the harsh criticism which modernization scholarship was subjected to regarding its single, universalistic, West-centric concept of modernity. It failed to seriously address the problems of catch-up modernization, uneven transformation of economy and technology (which can modernize quickly) on the one hand, and social institutions, practices and identities (which tend to transform at a slower pace), on the other. Thus, the late-modernizing societies can develop modern economic sectors and use the most advanced technology, but preserve more traditional family structures and certain primordial institutions, such as blood feud, for example. Intellectual premises of modernization theory were attacked for taking Europe as the norm; such a normative point of view was perceived as denying other societies and cultures the right to have their own ways. Said’s classics “Orientalism” not only offered a sensitive analysis of modernization from the point of “societies in - a hurry”, it gave impetus to post-colonial studies which aimed to analyze and decolonize cultural and intellectual heritage of formerly colonized societies (Said 1978).

In the 1960s and 1970s research was focused on search for prerequisites and the necessary conditions for the emergence of stable democracy. Some scholars emphasized socio-economic preconditions, such as GDP per capita, urbanization and literacy (Dahl 1971, Huntington 1984, Karl 1986) others underscored the importance of civic political culture, democratic beliefs and attitudes (Almond and Verba 1963) or analyzed the crucial importance of social structure,

The new wave of democratization since 1972 when in two decades the number of countries with democratic government increased from 44 to 107 inspired a tremendous body of research which aimed to explain dynamics, modes and paths of transition from authoritarianism, develop criteria for measuring functioning democracy and scrutinize conditions conducive for consolidation of sustainable democratic regimes.

The transition literature dropped the single uniform perspective on democracy and aimed to explore different ways, in which societies, even the poorer and less modernized ones, could build democratic governance. “Among various countries that have made the transition there may be many roads to democracy… the genesis of democracy need not be temporarily uniform: different factors may become crucial during successive phases… the genesis of democracy need not be socially uniform: even in the same place and time the attitudes that promote it may not be the same for politicians and common citizens”, claimed Dankward Rustow (Rustow 1970: 346).

Most of the transition literature focused on the role of political elites in sustaining democracies. Samuel Huntington claimed that democratic regimes instituted by mass protest actions had seldom lasted, while Juan Linz emphasized the role of leadership in successful democratization and the commitment of elites to democratic principles and their capacities to convince their societies of the value of democratic procedures (Huntington 1984, Linz 1990). Alfred Stepan conceptualized the major modes of re-democratization (Stepan 1986). Robert Dahl and Juan Linz emphasized the fundamental weight of elite pacts in the period of transition (Linz 1978, Dahl 1971). The theory of elite-led transformations left the possibility open for societies with weak civic traditions to achieve sustainable democratization. Thus, according to Doh Shin, “democracy is no longer treated as a particularly rare and delicate plant that cannot be
transplanted in alien soil; it is treated as a product that can be manufactured wherever there is
democratic craftsmanship and the proper zeitgeist” (Shin 1994:141).

Dankward Rustow underscored the importance of prior sense of community, “preferably…
quietly taken for granted that is above mere opinion and mere agreement” for the success of
democracy”. “The hardest struggles in a democracy are those against the birth defects of the
political community” (Rustow 1970: 363). Doh Chull Shin drew attention to the fact that the
factor of uncertainty increases risk and facilitates emergence of trust networks during transitions
(Shin 1994).

Many of the insights provided by transition theorists are useful for explaining the particularities
of Chechen and Ingush post-communist change. Thus, in both republics the role of leadership in
regime transformation was very prominent. In Chechnya the lack on agreement on what shape
should the political community take (separatist/ Islamist/ national-part of the Russian state) and
the overall high political uncertainty were major birth defects of the republican statehood.
However, the tendency of transition literature to understate the impact of social agency, the over-
emphasis on elite interactions and official institutions, its assumption of the autonomy of
political factors and the autonomy of politics with respect to social structure, make this body of
research insufficient for studying transitions in less modernized societies with prominent
informal social institutions.

During the 1990s transition theories were replaced by the literature on democratic consolidation.
Juan Linz defined “a consolidated democracy as the “one in which none of the major political
actors, parties or organized interests, forces or institutions consider that there is any alternative to
the democratic process to gain power, and that no political institutions or groups has a claim to
veto the action of democratically elected decision-makers” (Linz 1990:158). The proliferation of
research on democratic consolidation is surprising compared to the scarcity of literature on the
failure of democracies and on the consolidation of authoritarian regimes. As had been rightly
noted by Collins “democratization literature has generated few studies of the relationship between informal organizations and regime type and durability” (Collins 2006: 12).

All the theories reviewed in this section provide valuable knowledge on state-building, social change and the problems of democratization. However, most of them shared the perception of state and government as holistic, overemphasized the role of formal institutions and processes, analyzed modernization and democratization as linear and single-directed, and generally did not engage in detailed analysis of social dynamic at micro and meso-levels. Joel Migdal’s state-in-society approach aimed to overcome such a bias.

Scholars of late state formations in the developing countries as well as students of the Middle Eastern countries were no longer satisfied with the notion of the state as a single monolithic entity that exercises the ultimate monopoly of power in a given territory and looked for models which would provide a more adequate framework for the analysis of state, and society relations (Khury and Kostiner 1991, Migdal 1988, Migdal 1994, Migdal, Kohl and Shue: 2004). The “state-in society perspective” developed by Joel Migdal and like-minded scholars Atul Kohli and Vivien Shue, aimed at a middle-level theory of state and society, provided new directions in comparative politics. According to this approach states are parts of societies, they may help mold, but they are also continuously molded by, the societies in which they are embedded (Migdal 1994:2).

Migdal depicts society as a mélange of social organizations, where the groups exercising control in a society may be heterogeneous both in their form and the rules they apply, and the distribution of social control may be among them rather than concentrated largely in the state (Migdal 1988: 28). In this mélange the state has been one organization among many (Migdal 1988:29).
Moreover, for Migdal states are themselves complex entities, therefore, they must be “disaggregated”. “The overall role of the state in society hinges on the numerous junctures between its diffuse arts and other social organizations… It is necessary to disaggregate the state, paying special attention to its parts …to recognize the blurred and moving boundaries between states and societies, and to view states and societies as mutually transforming” (Migdal 1994:3). The state is not a fixed ideological entity. Rather, it embodies an on-going dynamic, a changing set of goals as it engages other social groups (Migdal 1994: 12).

Each organization or social force is an identity group, but also a structure providing life opportunities to an individual - “social control rests on the organizational ability to deliver key components for individual’s strategies of survival” (Migdal 1988: 27). At the same time, joining social forces presupposes a combination of rational strategies and emotional attachments. “In stitching together strategies for survival, people use myths or symbols to help explain their place and prospects in an otherwise bewildering world (Migdal 1988: 27). The allocation of values, however, is not centralized. Numerous systems of justice operate simultaneously (Migdal 1988: 39). In cases when social organizations are in conflict, and each proposes a different vision of good society, individuals must choose among competing components in making their strategies of survival; “these are difficult choices when people also face the possibility of competing sanctions. The state becomes part of such an environment of conflict” (Migdal 1988: 29). The struggles over domination happen through alliances, coalitions, and conflicts in multiple arenas, involving various components of the state and other social forces. (Migdal 1994:17). In the midst of struggles and accommodations, the boundary between the state and the other parts of society may continually shift, as powerful social forces appropriate parts of the state or the components of the state co-opt influential social figures (Migdal 1994: 26). One of the case studies in this thesis exemplifies such a set up.

According to Migdal, social control is the currency over which organizations in an environment of conflict fight. In his theory a state can achieve ideal-type patterns of reaction from social
groups: *Compliance*, i.e. gaining conformance to its demands by the population, which often comes with the use of the most basic sanctions and force. The ability to control police and the dispersal of a broad scope of other resources and services also determines the degree to which the state can demand compliance. *Participation* when the leaders of state organization gain strength by organizing the population for specialized tasks in the institutional components of the state organization. *Legitimization* – acceptance, even approbation of the state’s rules of the game, its social control, as true and right (Migdal 1988:33).

Migdal’s understanding of social dynamics within fragmented societies is Hobbesian. Intense competition of elites with various social forces and the weakness of leaders in the face of continued fragmentation of social control has led them to a range of strategies (Midgal calls them “the politics of survival”), aimed at preventing other organizations within the society and within the state to develop into strong competitors. These methods include softer policies like unmeritocratic appointments as well as torture, death squads, etc. Social organizations are likewise forced to use elements of such politics. A society with fragmented social control, according to Migdal, leads to the politics of survival (Migdal 1988: 257).

“State in society approach” aims to explain state capacity and the roles of various social forces in shaping politics in low income countries (Migdal, Kohli and Shue 2004: 309). My cases, although being post-colonial and ranking low in the economic development, were still moderately industrialized, highly literate and did not have a major problem of poverty. My claim is that in these cases the idea of the “autonomy of the state” has been internalized by the population, which makes the boundaries of the state quite stable and state-society distinction not as fluctuating as is in the Migdal’s model. Moreover, when the informal agency tries to capture or infiltrate institutions it is usually aware that it is transgressing the state’s territory. I also claim that in such context persisting social organizations prefer peaceful accommodation, while newly emerging *ad hoc* created political units tend to engage in “survival politics”.

25
1.3.1. Neo-Primordialism: “Clan Politics” Approach and the Factor of Kinship

Among attempts to situate the state within the web of social organizations a prominent place is occupied by the literature on clan politics, which has emerged in the last decade. This approach is mostly developed within regional studies of Central Asia, the most outstanding contributions being Kathleen Collins’ „Clan Politics and Regime Transition in Central Asia“ and a book by Edwards Schatz „Modern Clan Politics. The Power of „Blood“ in Kazakhstan and Beyond“ (Collins 1996, Schatz 2004).

The central thesis of Kathleen Collins’ thorough comparative study of post-communist Central Asia is that clans played the crucial role in the process of regime transition, transformation and state-building and “were the dominant social actors and political players” of political development (Collins 2006:3, 7). She defines clan as “an informal organization comprising a network of individuals linked by kin and fictive kin identities” (Collins 2006:17). In Collins’ theory clans as organizations predated the modern state (Collins 2006: 43) and persisted from pre-modern times (Collins 2006:44) due to their adaptivity and capacity to resist repressive modern states (Collins 2006:67).

In both pre-modern and modern times in Central Asia “clans, tribes and localist networks have generally defined their groups according to kinship identity ties, even though actual blood ties do not always exist, more important than the objective reality of kinship is the subjective sense of identity and the use of norms of kinship – such as in-group reciprocity and loyalty- to bind the group and protect its members” (Collins 2006:17). This bond forms “strong ties” based on tight, predominantly ascriptive relationships and norms; which makes clan boundaries, although not fixed and unchanging, difficult to permeate (Collins 2006: 23). Thus, according to the proposed theory, clans are organic, tightly knit kin-based organizations, which persist from pre-modern times and pre-exist any given political regime.

Collins explains how, in her view, clans survived into the twentieth century. According to her, clan members are formally not registered or catalogued by the state, for this reason most state
officials have difficulty in identifying or locating the membership and boundaries of clans. Since their institutions and practices are also informal, the state cannot easily punish or control them. Moreover, late state-building and colonialism are conducive to preservation of clan structures. Such, according to Collins, was the case of Central Asia, where the Russian colonial governance was indirect, limited and weak, and allowed the local population to continue arranging their daily affairs in their own ways (Collins 2006:64). Subsequently, Soviet leaders were more interested in collecting revenues from Central Asia than fully implementing Soviet reforms and modernizing policies. Clans had infiltrated the rural economic system during the 1920s and 1930s, but were kept in check at the upper echelons of power during the Stalinist era (Collins 2006:104). However, after Stalin’s death clans became salient and were informally entrenched in the power structures under Brezhnev”, which encouraged the stability of cadre (Collins 2006: 65).

Finally, after the collapse of the USSR clan politics flourished in the conditions of weakened state and political and economic uncertainty. Collins gives a comprehensive, very detailed account of how in each of her case studies elites established informal rules of the game, based on patronage, asset stripping, and “crowding out” of formal institutions through clan-based mobilization, finally resulting in inefficient unconsolidated unstable governments (Collins 2006, 51- 52).

“Clan Politics and Regime Transition in Central Asia” is an important contribution to the body of research on informal politics. Collins rightly points that the studies on the role of society in democratization and transition typically focus on formal social organizations, such as class, labor, parties, but that the role of informal actors is just as crucial (Collins 2006:10). She proposes a vigorously new approach, which “puts clans at the center of the theory of political development” (Collins 2006:7).

In chapter 2 Collins provides her conceptualization of clan, i.e. analysis of clan structure, socio-economic rationale, nature of trust between clan members, internal clan norms, and attempts to
make neat terminological distinctions between the notions of “clans”, “tribes”, “regionalism,” “clientelism”, and “corruption”. The clan is conceptualized on the basis of findings of sociological, political science and economic literature and studies conducted by other authors in contexts as different as Korea, Japan, Tunisia, Algeria, Morocco, or late Medieval Genoa and presented as general knowledge on clans. “Clan-based society” is treated by Collins as a generic sociological category, which seems to mistake an empirical claim for an analytical one. Empirically, the existence of clans is not questioned, Collins inquires into “why do clans persist”, not “do they persist”, while the evidence of clans’ omnipresence is exemplified by several episodes of collective behavior, such as rural Elders voting for 20-30 people in parliamentary elections and the weakness of parties as compared to strength of single-mandate candidates in Central Asian parliaments.

When it comes to the analysis of actual political processes in Central Asia the terminology becomes blurred. Collins speaks of “Samarkand clan” or “more narrow Tashkent clan” (Collins: 2006:123) or “Fergana Valley Elites”, which “undercut power of the Jizzak oblast’ (Collins: 2006:121). We learn about clans from Chui, Talas, Naryn, and Issyk-Kul regions in Kyrgyzia, or “distribution of power and resources in favor of Leninabad region” in Tajikistan, or deal with “Akaev or Sarugulov clans”, “Ajmatov networks” or the rise of Karimov “Family” (Collins: 2006). Thus, clans are “families”, “cliques”, “networks”, ‘oblasts’ and “regions”, which Collins sees as a “variation on the theme”, a claim which is confusing if one wants to scrutinize clan as a social phenomenon. Collins explains that “clan constitutes the identity and social universe of its members”, that it has an intrinsic meaning, and legitimacy and cannot merely change its social constituency (Collins 2006:29, 58). Clan is a hierarchical structure, “any particular clan network includes both elites and non-elites or masses” (Collins 2006: 29). If this is so, it is hard to imagine a two million city of Tashkent to belong to one hierarchical clan organization and share an intrinsic affective identity to it.
Collins admits that clans include representatives of a shared locality, village or regional network, and school and business colleagues, but she integrates them into her theory by including them into a network of fictive kinship (Collins 2006: 26). It remains unclear how pre-modern kinship communities (92 nomadic Uzbek clans, Ong, Sol and other Kyrgyz clans) transformed over time into current political networks. Any organic social organization with a long history would have stable mechanisms of decision-making and elite recruitment. How did a historical “clan” turn into a “Sarugulov” clan, why did Karimov become a leader, but not the oldest or the wisest of his clan’s Elders and how was he selected; what is the link between a Karimov or a Sarugulov clan with their respective historical clans and is there such a link; does “Karimov” clan represent any larger community or is it just a major personal network of close relatives, friends, and trusted people who constitute his political and economic “inner circle”? Arguing that the Soviet regime allowed for kin-based nepotism and corruption is not sufficient if one wants to explain the persistence of pre-modern structures into modernity. Moreover, rich kinship does not equal to clanship, a claim that my research aims to exemplify.

My research claims that studying informal politics should be very case-specific. Knowledge of informal politics in different social and political settings should be very critically tested before applied to any other specific social reality. Knowledge of clan structure, socio-economic rationale, nature of trust between members, and internal clan norms in Korea or Medieval Genoa cannot be easily generalized to Central Asia, and knowledge of Central Asia does not automatically apply to Chechnya, which Collins perceives as a vivid illustration of how “interclan tensions may lead to group mobilization and violence”, probably just because kinship is a visible social factor in the Chechen society (Collins 2006:41). Without careful anthropological scrutiny of “clans”, without research of descent and kinship patterns in a given community, without analysis of connections between macro- and micro-levels (elites and communities) of informal politics one cannot convincingly argue the persistence of pre-modern structures into the present day political reality.
Edward Schatz’s “Modern Clan Politics. The Power of “Blood” in Kazakhstan and Beyond” defines clans as pre-existing kinship identities, where precise genealogical knowledge is understood to define membership (Schatz 2004: 26). Schatz picks up Collins’ argument that clans managed to persist and avoid oftentimes brutal methods of modernization due to their inherent quality- concealable nature. Stalin eliminated the traditional basis for clan organization, but he replaced it with a novel mechanism: the shortage economy. Soviet scarcity allowed underground networks to access goods and this way reproduce themselves (Schatz 2004:22). “Clan networks were valuable because they were elusive: they could be hidden from the agents of the Soviet surveillance” and this way they survived (Schatz 2004, xxv).

Schatz admits that by 1990s, however, clan politics was no longer about relatively coherent groups that made demands on everyday behavior and political expression, rather it was about flexible kin-based networks that were a resource for individuals in their political and economic affairs. (Schatz 2004: 45). Clearly, networks of individuals exist in every polity and “the Soviet state promoted tight-knit access networks- whether in Estonia or Moldova or Russia” (Schatz 2004: 48). But in ex-Soviet South, claims Schatz, “where pre-existing kin-identity divisions provided a ready cultural connection, the result was to shore up sub-ethnic network of access. In Central Asia and in the Caucasus, networks coalesced around genuine kin connections, since sub-ethnic background was considered axiomatic” (Schatz 2004: 61).

Schatz’s work, more solidly grounded in ethnographic research compared to Collins’s, seems to provide a more fine-tuned picture of social processes in Kazakh urban and rural communities. His analysis shows that subethnic ties vary- they may be rooted not only in kin relations, but also in attachment to physical place, ethnic group or Islam (Schatz 2004: 26, 149) Schatz does not scrutinize these other attachments in depth, working from the original assumption that kinship is the dominant sub-ethnic category in the society and in politics. Neither does he treat seriously ideological divides. Schatz’ theory has no answer to the question of how much “clan politics” is a result of bottom-up promotion of elites from pre-existing kin-structures, or a creation of
political elites, who use kinship as one of the resources to sustain powerful, tightly knit inner circles, based on interdependence and trust, and aimed to make these elites strong players in high risk- environment of authoritarian polities, governed through illegal political and economic practices. Schatz observation that Russians in Kazakhstan, when accessing power start to behave a lot like the “Fourth Umbrella Clan”, is indicative that non-transparent, authoritarian, semi-legal style of government, rather than pre-existing identities is conducive to emergence of “political clans”.

In some places Schatz’s argument seems contradicting itself. He conceptualizes clan politics as a breed of identity politics, in his view clan cleavages persist because they are the emotional building blocks of identity (Schatz 2004: 12). He emphasizes repeatedly that descent-both fictive and real - is the central operative principle of sub-ethnic clan identity (Schatz 2004: 26). At the same time he argues that the Soviet state deprived clan groupings of their cultural content and “clans were no longer the corporately defined kin groups that dealt with a wide array of cultural, social and political matters. In the post-Soviet period, individuals used kin-networks often without imagining clan as a coherent group” (Schatz 2004: 97). How can clan play an identity game if it is deprived of cultural essence and is not imagining itself as a group? There is a conceptual tension between Schatz’ argument about concealability as a crucial characteristic of political clan and his classifying of “clan politics” as a breed of identity politics, by which we usually understand the contrary – vocal political process aimed at public affirmation, recognition, and acceptance of a minority identity.

My thesis stems from the assumption that the prominence of kin affiliations at micro-level is not sufficient to proclaim clan-based politics at macro-level. It will try to tackle the problem of the role of kinship in top-down and bottom up elite formation, treat seriously other sub-ethnic identities (Sufi brotherhoods, Salafi trends, localism, regionalism) and ideology, and scrutinize their impact on state-building and elite formation.
Schatz claims that his theory applies to most of the post-Soviet South and exemplifies his thesis with Chechnya, where “sub-ethnic teips became enshrined in Moscow’s decision to launch a bloody invasion in 1994; some groups were most closely allied with Russia and others more staunch supporters of independence” (Schatz 2004: xvi). My thesis provides evidence against such a generalization.

Scholars of clan politics also work on Chechnya. Thus, in 2003 the Central Asian Survey, published an article by Maria Sultan, who came up with policy proposals aimed to resolve the governability problem in Chechnya. According to Sultan, the Chechen society is “tribal and egalitarian in nature”, “divided into nine Tukhums (tribes), subdivided into Teips (or clans), then village-level units and then into individual households”. Moreover, according to her, the Chechen society is acephalous (‘without a head’), which means “bordering on anarchic, given the emphasis on equality” and has come “very close to the archetype of democracy, given that it is councils of elders that are the only decision-making authority with any legitimacy in society”. Mekhk Khel /Council of Elders – E.S./, argues Sultan, is “the main decision-making mechanism, entrusted with the power to adjudicate disputes, to decide on matters of war and peace (Sultan 2003: 437–457).

Sultan sees the essence of the problem that the Russian state has with Chechnya in that “at a deeper societal level, Chechnya, and especially mountain Chechnya, is a case of a traditional (though modernizing) tribal society in conflict with the alien modern nation-state, which for decades has been trying to incorporate tribal areas into itself, thereby flouting the social and legal codes of tribal societies and hence wittingly or unwittingly seeking to undermine the very foundations of society among the tribal peoples”. Sultan stresses this point because she finds that there exists “the fundamental incompatibility between the modern nation-state and a tribal social structure” (Sultan 2003: 437–457).

Based on the outlined above, Sultan suggests to divide Chechnya into lowland and mountainous areas, hoping that the lowlands can accept some kind of union with Russia, and to organize a
“Tribal Area” in the mountainous Chechnya. This area should be governed by a “Political Agent” who will enforce law via community councils, and through their rulings bring the perpetrators accountable. “Should the perpetrator be absent, his property can be confiscated; should this fail, the Political Agent can hold the individual Teip responsible for the actions of its member, and force the payment of a … stipulated fine for the offence. There can then be an entire series of actions in case of refusal, involving blockade of a certain Teip, etc. (Sultan 2003: 437–457).

Sultan’s research is an example of scholarship, which in the 21st century puts forward policy proposals, based on selective reading of the 19th century history. This thesis will fully refute all the above outlined claims.

Clan-tribal approach to Chechnya is also adopted by other quite distinguished authors, such as Anatol Lieven who defined the Chechen society a clan-based “ordered anarchy” (Lieven 1998:331). The ‘ordered anarchy’, wrote Lieven is “whereby a society which appears to be utterly chaotic and riven by internal feud in fact obeys extremely strict rules and restraints in its behavior, and most importantly, in its capacity to mobilize against a common enemy” (Lieven 1998:331). Valeriy Tishkov also found the clan factor relevant in the Chechen society’s slipping to war (Tishkov 2004). Clan literature on Chechnya is not as theoretically elaborated as is clan research on Central Asia. That is why in what follows, my conceptual argument will be mostly targeted against the theory of Collins and Schatz. Following Khory and Kostiner, I will argue that what we observe in contemporary kinship-rich countries are new forms of informal relations which are rarely based on ties of kinship alone but rather are a mix of various patterns of social integration, including kinship, religion and political interests (Khory and Kostiner 1991:18).

The state-in-society approach is a useful methodological framework for analyzing fragmented, kinship-rich, unevenly modernized societies. Clan politics literature offers a vigorously new framework in political science, by claiming that a lot of what we see as formal institutions actually belongs to the sphere of informal politics. This thesis shares the original position of
Migdal that state is one of the societies’ organizations and the belief of clan politics authors that kinship matters as a political factor in the North Caucasus. The empirical part of this research will evaluate the relative autonomy of state structures, and stability of state-society divisions as they are perceived by the populations under study. Chapters 2-4 will scrutinize social change in the North Caucasus prior to state-building efforts and following Migdal will claim that “massive societal dislocation, which severely weaken social control” and local strongmen coupled with impressive modernization and literacy created conditions for building effective democratic government (Migdal 1988: 269).

The North Caucasus represents a different social reality if compared to low-income, low-literacy, agrarian societies of the Third World, which Migdal’s theory aimed to explain. This research will try to combine informal politics factor with the analysis of formal political processes, paying sufficient attention to organic ties of kinship as well as other social integrative patterns formed on the basis of political ideology, territory and religion.

1.4. Kinship in Anthropological Theory
Kinship is a traditional object of analysis in social anthropology, which managed to become central to this discipline. For most of the history of anthropological thought, kinship has been seen as a social structure characteristic of any society, larger structures based on kinship exist in many parts of the world, which are usually called the descent groups and are conceived as long-chains of parent-to-child ties stretching back for generations (Parkin and Stone 2004). In this section I review the main debates in anthropological theory of descent and kinship, which are relevant to this thesis.

The first influential kinship theory was outlined in Henry Maine’s “Ancient Law” published in 1861. Maine based his theory of patriarchal order on the analysis of Greek and Roman authors and cases of Roman jurisprudence. According to him, at the origins of human societies were individual families, held together by the authority of the eldest male patriarch. In the process of
evolution, when the Patriarch died, his children and families stayed together. Extended families organized along unilineal principle eventually formed the first primitive polities. The unilateral kinship corporations ensured continuity and thus became subjects of the primitive jurisprudence. It was only later that the communities integrated on the basis of kinship transformed into societies bound by territorial attachment (Maine 1861). In Maine’s view the development of human societies was from families through large descent groups to states. Simultaneously, as the polities grew, the family was getting smaller and less patrilineal (Maine 1861).

Another founding father of anthropology of kinship was Lewis Morgan, whose “Systems of Consanguinity and Affinity in Human Family” published in 1870 and “Ancient society” which came out in 1877 have probably been the most passionately criticized research in the discipline, yet this work still remains the cornerstone of the kinship studies. An American lawyer, Morgan was interested in the Iroquois and represented their interests in land rights disputes. He continued his research in Asia and among other tribes of North American Indians. Eventually he discovered that kinship terminology was similar among Iroquois and in quite a number of other tribes and had a generational principle of distinction, whereby all males of each generation had one term, while all females of each generation had another term.

Morgan tried to explain this system of kinship with a theory of primitive promiscuity which, in his view, was the primordial social order of human societies. Primitive societies were divided into hordes with no form of marriage or restriction on sexual intercourse. In such situations children could be identified with their mothers with some certainty, while their father’s identities remained obscure in most of cases. Contrary to Maine, in Morgan’s view the evolution of humanity was from communal marriage through polygamy/ polygyny to nuclear families. Primitive promiscuity has not been recorded anywhere in written history, but Morgan deducted it on the basis of his conviction that terms of kinship should reflect biological relationships (Morgan (1861)1997). For this he was strongly criticized by his followers and accused of imposing his own European notion of kinship (as biological tie) on societies that he researched.
Morgan’s contemporary McLennan argued that his classificatory systems of kinship were nothing more than a code of ceremonial addresses, salutations and courtesies (McLennan: 1876/1998), while Alfred Kroeber in 1909 considered them to be determined by language and “reflecting psychology, not sociology” (Kroeber 1909:84).

Morgan’s extravagant vision of human evolution, speculative findings and “glaring fallacies in reasoning”, but most of all his invention of a misleading and unappealing model of primitive “communism in women and property” (Fortes 1969: 5) made his work almost obliterated within the discipline until another prominent anthropologist Fortes brought him back to academic life (Fortes 1969). Fortes argues that what is nowadays called structural theory in the study of kinship and social organization not in historical sense, but in the conceptual sense originates from Morgan. Morgan was the first to view kinship as a system and underscored the necessity to understand this system in relation to action. In his “Ancient societies” he introduced a distinction which later became central to the anthropology of kinship i.e. that between “kinship” and “descent”, between ‘domestic’ and ‘political’ uses of kinship. Morgan wrote that family can not be a basic unit of social organization, because families are made up of spouses of both sexes, and if ties through both sexes are recognized, then kinship cannot provide basis for the establishment of exclusive groups (in: Harris 1990: 14, 15). For exclusive groups to emerge they have to be based on the principle of unilineal descent. Unilineal system of group formation is seen as a cultural distortion of a natural state of affairs, which presupposes bilateral families. Moreover, if human species are endogamous, clans are exogamous. Groups of descent are thus cultural distortions and social organizations, which have a political and economic character, but nonetheless are defined in kinship terms (in: Harris 1990: 14, 15).

Morgan’s approach to the study of kinship inspired a methodological debate, which has relevance to the present research. Anthropology like no other discipline heavily relies on participant observation and ethnography, both of which pose a methodological problem of the researcher’s bias. It was an American scholar Franz Boas who vigorously advocated participant
observation, but also introduced the cultural relativity argument into the anthropological debate. An anthropologist researching society different from his own runs the danger of imposing his own culturally determined perspectives on the society which he studies. Boas argued that one has to understand a social or cultural phenomenon in terms and concepts accepted in a given culture rather than try to fit them into existing Western categories. In his late research of the Kwakiutl clans he argued even against translating the indigenous term “numaym” as "clan," and claimed that numaym was a certain set of privileges, for which there is no corresponding term in English (Boas 1970). Boas’ cultural relativism argument later resulted into a division of anthropological categories into “emic” (indigenous concepts and categories) and “etic” (external concepts and categories used by the anthropologists to compare societies) (Stone 2004: 244).

Malinowski developed Morgan’s idea that the family is always the domestic institution *par excellence*, while the clan is never domestic, and claimed that bonds of clanship develop much later as an extension of the primary family sentiment (Kuper 2004). Malinowski considered the family to be based on kinship, have the bilateral nature and consist of the totality of a person’s kin relations in all directions, while descent was seen as unilineal, political and connecting individual with his senior and younger relatives in a direct line. Rivers associated clan with a specific territory, but considered that territorial tie was one bond which kept the members of clan together, but the belief in common decent rather than habitation of a common territory was more prominent (Rivers 2004: 22-23). In Britain the clan model was gradually replaced by the lineage model, which was defined as a segmentary political organization, corporate, exogamous, localized descent group (Middleton, Tait 1958). Radcliffe-Brown in his “Patrilineal and Matrilineal Succession” argued that clan or lineage was an organization which transcended an individual, and thus formed the basis of social system, which required continuity by basing itself on stable corporate groups transcending their individual members (Radcliffe-Brown 1935, 1952). Fortes considered kinship bilateral and arising out of a private and reproductive sphere, while descent being concerned with allocation of individuals to corporate groups whose significance is
jural and political (Fortes 1969:10). But for Fortes the distinction between kinship and descent is not between separate spheres or different relationships, but between two aspects of a relationship. Both the family and the descent group have a politico-jural and kin aspects, since lineage reproduces itself through the family, and perpetuation and segmentation of lineage happens as a result of cleavages between family members or generations. Kinship relations were between individuals, “clan relations” - between groups (Fortes 1953:33). For Fortes bilateral kinship relations were important for binding together the major groups by filiation through marriage. Fortes uses the term “complementary filiation” to refer to the recognition of ties through whom descent is not traced. This way Fortes follows Durkheimian logic, his descent groups are Durkheim’s segments of a primitive social system linked through mechanical solidarity based on likeness, and integrated within and between segments on the basis of kinship (Harris 1990: 25). In such a society the clans, which were essentially similar could occasionally die out without impairing the society as a whole (Parkin and Stone 2004: 11).

An important debate on the issue of the nature of social integration and stability in clan-based societies took place between Fortes and Levi-Strauss. The latter claimed in his seminal book “Elementary structures of Kinship” (1969) that the ultimate origin of social solidarity was not filiation, but exchange. In Levi-Strauss view the incest taboo, which exists in most of societies encourage individuals to look for mates outside their kin group. The underlying demand for continued circulation of women keeps various clans peacefully related. This produces a society, which consists of a number of exclusive groups which exchange mates, and it is about the only reason why such decent groups need each other. Thus the most primitive form of social solidarity is that of exchange, which is being understood in terms of reciprocity (Levi-Strauss 1969). Alliance interpretation of social integration preserves the distinctness of the boundary between descent groups, while the descent theory blurs it (Harris 1990: 25). My research findings lean closer to Fortes interpretation of social integration between kinship groups through “complimentary filiation”.

38
The relation between territory and descent is another debated issue in social anthropology. In a functionalist model the principle of descent was functionally united with territory. The segmentary lineage system was a system of values which linked tribal segments and provided the idiom in which their relations could be expressed and directed (Evans-Pritchard 1940: 212). Fortes considered lineage and locality to be independently variable and their interaction depended on circumstances of the individual social structure. According to him, local ties were secondary and did not provide structural bonds by themselves (Fortes 1953: 36 in Kuper: 2004: 89). Leach, on the contrary, considered territory to be reality, while descent to be fiction. In his view, both descent and kinship were idioms, manipulated by individuals for their private ends. Communities are not defined by descent, but by territory from which individuals derive their livelihoods (Leach 1962: 300 in Kuper 2004:90).

A big shift in anthropology of kinship was initiated by David Schneider, an American anthropologist, who stretched the relativist argument to the utmost and claimed that kinship was non-existent as a category that can be compared. Schneider started by arguing that anthropology of kinship was engaged in studying genealogy, which was based on a biological perception of kin. This, according to Schneider, was a Eurocentric view, and did not correspond to the way many societies thought about their relations linked to procreation (for example, Yapese did not have a concept of fatherhood and thought that children were made by ghosts). Moreover, a lot of kinship was social (adoptions, fictive kinship). Kinship was a product of anthropologists’ efforts, and the way it was constructed by scholars it “does not correspond to any society known to man” (Schneider 1968:50).

In early 1970s Schneider carried out a research of American attitudes towards kinship and meanings of kinship, terminology and symbols that Americans associated with kin relations. Schneider’s main finding was that Americans have no specific concept of kinship and what was previously understood as specific features of kinship, Americans shared with nationhood and religion. In Schneider’s view to be taken as a valid analytical category kinship had to be
conceptualized as biological at the *emic* level, moreover, it had to have a specific set of characteristics not shared with any other domains of human affairs. Schneider’s solution was to make a shift from analyzing kinship as a social organization to taking it purely as a cultural phenomenon and instead of starting to analyze societies by reconstructing genealogies and interpreting kin terms, to start by asking how any specific society understands and organizes itself around facts of biological relatedness. Moreover, in order to claim that kinship system exists one has to differentiate it from other universals—economics, politics, and ritual. Only then can we claim that there exists a separate domain of kinship, which becomes a contingent matter (Schneider 1968).

Schneider’s critique was devastating to the discipline and inspired revisiting and even deconstruction of the main concepts and categories employed by anthropology of kinship. Some authors, like Janet Carsten and her co-authors in an edited volume “Cultures of Relatedness. New Approaches to the Study of Kinship”, dropped the very term ‘kinship’, and introduced the concept of ‘relatedness’, which was used “in opposition to or alongside, ‘kinship’ in order to signal an openness to the indigenous idioms of being related rather than reliance on pre-given definitions or previous versions” (Carsten 2000: 4:). Students of kinship focused more on its emotional and gender aspects, its creative potential, as well as the process of “becoming connected”, which involved food-sharing, affection, nurture and substance sharing in the local micro-environments (Lambert 2000, Yanagisako, Collier 2004, Fienup-Riordan 1983).

The Schneiderian theory that regards kinship as a purely cultural phenomenon does not make the pre-existing social anthropology of kinship irrelevant. However, following Harris, his message is that the methods of social anthropology are fundamentally misconceived in their attempts to establish general categories of analysis in anthropology (Harris 1990: 45). This lesson drawn from Schneider is relevant for my research: during most of my fieldwork (for about 4 years) I did not question people about the *etic* categories of kinship, like “clan” or “lineage” or “family”. Rather, I observed *how* kinship relations were organized in the society and *how* these structures
related to the overall system of social relations. Having mapped these relationships, as they are organized at the *emic* level, I then tried to conceptualize them at the *etic* level. This is the main difference between my approach and that of clan literature authors like Collins and Schatz quoted in the previous section. In chapters 5-7 I do not start my analysis of political processes with the role of clans. I start by scrutinizing the state-building efforts and by singling out the main political actors and social forces participant in political processes. I go on sorting out the principles of organization and mechanisms of integration of those actors as well as their social composition, the prominence of kinship and descent groups in their social make-up. I then establish the overlap between the political and the social patterns of integration in the societies.

Other important debates in social anthropology, which are relevant for my study, are related to the debate on how much kinship biological or social or even ‘fictive’ in certain ways. A famous discussion on this matter took place between Needham and Gellner, in which I find Gellner’s argument more persuasive and relevant for my analysis, and therefore discuss it below at some length.

According to Needham: “biology is one matter and descent is quite another, of a different order”. For him the defining character of descent systems is social. He gives the example of adoptions or leviratic marriage[^1] to prove how social kinship does not correspond to biological (Needham 1960: 97). Gellner argues that Needham understanding of kinship is erroneous, that both adoption and “leviratic marriage” imitate biological kinship relations, and the “very possibility of classifying offspring as adoptive, depends on the observer’s knowledge of the disparity between the social and the physical relationship and it is this disparity which gives the term its meaning (Gellner 1987:165).

For Gellner the physical and social kinship systematically overlap and to deny that is to deprive kinship theory of any explanatory power: “to say that (merely) social kinship and (merely) social birth and the connection with the physical kinship or birth were merely contingent and sociologically irrelevant” means to say that “that simpler societies have some kind of structure or

[^1]: When brother marries the wife of his deceased brother and raises his children
relationships, and that a man’s social position is determined by something…” (Gellner 1987: 165).

Gellner acknowledges that social kinship systems are not identical with the reality of physical kinship, and it is important not to equate kinship beliefs with kinship reality, being aware that there are frequent situations, when “genealogies became untrue or after the fourth generation men will name correctly their grandfather and perhaps his father, but beyond that relatives are simply “arranged” so as to express, symbolize sub-groups existing in the tribe now» (Gellner 1987:169). At the same time, in his view the reason why “clan” is being discussed as a kinship structure is not because clansmen subscribe to the myth of common ancestry (although they do), but because the relationship of belonging to a clan satisfies the initially set up criterion for classifying a social relationship under the rubric of kinship structure (Gellner 1987: 169). Clan is a concept essentially related to other concepts – they might be “sub-clan” or “lineage” or “extended family” which in turn do denote groups for whom some social reality ….does have a reasonable and systematic congruence with some kinship affinity (Gellner 1987:168).

In short, in Gellner’s view social kinship relationships are superimposed on social structures, which are molded exclusively by the pattern of mating, since human biology is universal and does not vary sufficiently. It is the social recognition of physical kinship, the kinds of physical relationships utilized for group-membership recruitment that vary from society to society and they should be researched and explained (Gellner 1987:176).

My fieldwork in Ingushetia and Chechnya supports Gellner’s position that biological aspect of kinship is taken very seriously in these societies. In my context Gellnerian proposition that in kinship relations “fictive” patterns (mainly adoptions) imitate the biological kinship, follow the same logic and thus do not distort the overall structure. My research proves that the notion of fictive kinship in Chechen and Ingush societies cannot be stretched too far: unlike Collins, whose notion of fictive kinship in Central Asian societies includes neighbors and friends, my respondents were always very clear of who was a relative and who was not, who belonged to the
kinship group and who - to a more broadly defined inner circle. These were treated differently and relationship with them involved a different set of rights and obligations. This is an important finding which refutes the clan politics argument claim that neighbors and friends should not be analytically differentiated from kinship and are a variation on the theme.

Descent in Chechnya and Ingushetia is generally conceptualized in kinship terms; however, clans have become too big and fragmented to be truly believed to be biological. Teips have indeed become social, and they use kinship as an idiom, rather than as a set of rights, obligations and duties. This, in my view, is another proof of clan’s deterioration as a social structure: the core idea of biological relatedness has been lost, the social function of structure has become irrelevant, and what remains is just a vague clan identity, which is fading away. Lineages, are indeed, more tightly knit and do share the sentiment of biological relatedness. They, rather then teips are the remaining splinters of once powerful Vajnakh clanship. As has been rightly pinpointed by Harris, genealogical distance has fading effect, the relationship becomes weaker, the possibility of evasion of kinship duties - stronger. In more distant relationships, while kinship ties are equally ascribed, they can be paradoxically chosen on the basis of personal liking (Harris 1990:62). This often transforms them into a relationship of different kind.

The notion of kinship has a distinctive normative content, which is the moral character of kinship, a morality, which cannot be reduced to self-interest (Harris 1990: 42). Pitt-Rivers and Meyer Fortes classified kinship as a relation of amicability which is warranted by a biological idiom of identity of substance (Pitt-Rivers in Harris 1990: 43, Fortes 1965). But in Harris’ view, kinship relations, more than any other imply a set of obligations and duties. To perform a duty is not necessarily an act of amity or altruism. Moreover, as empirical evidence shows, kinship in many cases involves rivalry and conflict. Kinship obligations are unspecified in nature, which provides opportunity for negotiation and bargaining, rather, kinship pre-supposes a kind of relation, which excludes egoistic calculation (Harris 1990:60). Most authors note that kinship is based on a high degree of trust, and the longer the period of exchange, the longer the trust.
Kinship relationships involve exchange, but are not equivalent exchange. They are concerned with advantage, but not the calculation of advantage (Harris 1990: 61)

Peter Schweitzer and his co-authors of an edited volume “Dividends of Kinship. Meanings and uses of social relatedness” are more straightforward than Harris in exploring the instrumental value of kinship in particular instances, mostly in economy, throughout the volume frequently resorting to market metaphors in the analysis of their case-studies. Schweitzer’s likens his understanding of kinship as ‘dividend’ to Bourdieu’s usage of cultural, social, symbolic ‘capital’. For him economic benefits are among the most visible dividends of kinship, but kinship cannot be reduced to rational choice of pure pursuit of economic interests, but are “part of a much larger package, that also includes emotions, mental health, group cohesion, etc (Schweitzer 2000:16).

This understanding of dual nature of kinship as an ascriptive, affective bond and as a resource, is relevant for my empirical research.

To sum up, this thesis borrows from the anthropological debates on the concept of kinship: 1) the distinction between ‘kinship’ and ‘descent’; 2) the distinction between emic and etic visions of social structures; 3) Schneiderian methodology of not imposing emic visions on the researched societies and of starting research of kinship from the scratch, from analyzing how kinship relations were organized in the given context and how these structures related to the overall system of social relations. It will also use Fortes’ notion of complimentary filiation as well as benefit from Peter Schweitzer’s understanding of kinship not only as an affective tie, but as a social resource.

1.5. Trust Networks and the „Economy of Favors“

Both classic and contemporary research emphasizes the fundamental importance of trust in social relations. The roots of trust and its institutionalization is found from a child’s birth within the family and kinship settings to the broader society. Several aspects of the structuring the institutional order tend to exacerbate the problems of breaking up and reorganization of trust.

The flow of resources can be structured along „market“ or institutional interrelations and
exchange or through what is called generalized exchange, which is based on certain rules of reciprocity. In all societies the generalized exchange is to some degree at least upheld by more informal, yet very pervasive networks of solidatory relations or trust (Eisendstadt 1997: 37).

Economists claim that that trust networks are particularly relevant in the situations of risk, where uncertain enforcement of contracts or high information costs are not uncommon, they provide cheap security to an economic actor (Landa 1994: 101). Usually it is assumed that such groups are kin-based, and solidarity exists prior to entering economic or public relations. My thesis will supplement and confront this point by analyzing the historical and anthropological material to confirm that, indeed, informal networks are prominent in many aspects of social life, including politics, however, they are 1) not descent /kinship based, although oftentimes using kinship as a prominent mechanism of recruitment 2) not organic and preexisting any particular trust groups, but usually ad hoc created and building up trust in action.

I will support my claims using the framework provided by Charles Tilly’s theory of trust networks outlined in his,‘Trust and Rule‘ published in 2005 and Granovetter’s framework of strong and weak ties.

According to Tilly, networks reach into every corner of social life. They include communication, mutual recognition, shared participation in some activity, flows of goods or services... and other forms of consequential interaction and include any set of similar connections among three or more social sites. (Tilly 2005: 5,7).

Tilly defines trust in terms of risk. For him, trust networks consist of “ramified interpersonal connections, consisting mainly of strong ties, within which people set valued, consequential, long-term resources and enterprises at risk to the malfeasance, mistakes or failures of others” (Tilly 2005: 12). Trust networks place a major value on common enterprise, *inter alia* protection of personal secrets, high risk politics, they build controls over malfeasance and safeguards against consequences of mistakes and failures into their routine operation, and involve in noncontentious politics more regularly and usually more consequentially than in contentious
politics (Tilly 2005: 6). Tilly claims that groups not linked by kinship, but by religion, political commitment or trade can acquire and maintain very strong kinlike solidarity. Moreover, trust does not necessarily have to be pre-existent but develops over time (Tilly 2005: 9).

Tilly finds two ways how trust networks integrate with the state – indirectly, „when the trust networks extend into politically engaged actors that in turn bargain with each other and with governments over the allocation of politically mediated costs and benefits“ and directly, when trust networks extend into the government itself (Tilly 2005:7). When leaders become indispensable to the operation and reproduction of trust networks and guarantee the means of maintaining them, rule becomes more stable. Conversely, increasing alternatives of ruler’s intervention and decreasing reliability of that intervention promote instability (Tilly 2005: 50).

Borrowing from Charles Tilly's concept of trust network as a risk management strategy this thesis will argue that trust networks do not have to necessarily be based on strong common identity, but political and economic interest in high risk environment produces similarly tight networks of access, mutual economic dependence, and risk-sharing. Such relationships I will call „strong ties“.

The notions of “strong” and “weak” ties have been explored in sociology since 1960s. The most comprehensive theory of strong and weak ties was developed by Mark Granovetter, who defined strength of a tie as a (linear) combination of the amount of time, the emotional intensity, the intimacy (mutual confiding), and the reciprocal services which characterize the tie (Granovetter 1973: 1361). The strength of tie could be roughly established on an intuitive basis, and Granovetter distinguishes between strong, weak, or absent (or negligible) ties which can be multi- or uni-dimensional. Previously Kapferer suggested that a strong tie is characterized by "multiplexity," that is, multiple contents in a relationship (Kapferer 1969, p. 213). Gannoveter and Simmel argued that although this may be true in some circumstances, ties with one content may be strong as well (Granovetter 1973: 1361, Simmel 1950: 317-29). But the strong tie is positive and symmetric. This insight is relevant for the present study, which will claim that
corrupt and oppressive regimes develop very strong, one-dimensional ties primarily based on mutual economic interest. Thus, controlling for the strength of ties is relevant for improving the quality of governance.

For Granovetter strong ties include relatives and close friends. Weak ties are acquaintances of various kinds. The importance of weak ties is growing with the evolution of social systems, especially with the division of labor since increasing specialization and interdependence result in a wide variety of specialized role relationships in which one knows only a small segment of the other's personality. Various studies conclude that the level of education, income and mobility have an impact on the significance of one’s weak ties, which, in Granovetter’s theory have a prominent function of serving as bridges of one’s inner circle to various types of other social circles (Lin et al. 1981, Lomnitz 1977, Granovetter 1973).

In this thesis I will adopt Granovetter’s distinction between strong and weak ties and use it for the analysis of the formation of governments and the political elites. In my research I deprive the notion of “strong ties” of the Granovetter’s emotional intensity and positive affection, and emphasize Tilly’s interdependence and trust. I thus define strong ties in politics as an interrelation of trust which involves 1) informality and intimacy (mutual confounding in risks), 2) reciprocal services and 3) strong interdependence, when people set valued, consequential enterprises at risk to the malfeasance, mistakes or failures of others. Weak ties are loose connections, which are predominantly formal, procedural and do not involve strong interdependence or mutual confounding in risks.

The functioning of informal networks of trust is best described by Alena Ledeneva in her two books on the Russian informal economy and politics. „Nelzya, no mozhno“ (prohibited but possible), a Russian phrase, which in Ledeneva’s view summarised the principles of function of the Soviet economy and distribution of public goods – „an all embracing restrictions and the labyrinth of possibilities around them“ (Ledeneva 1998: 1). Blat, which Ledeneva claims is a
very culture specific phenomenon, indicates a set of personal connections which can be mobilized in acquiring desired commodities outside the official system. Blat networks emerged in the Soviet times as a response to the structural constraints of the Soviet system, but smoothly traveled into the post-Soviet era transforming into the networks of trust, a new institution of „svoi ludi“ (people of the circle).

Blat is a term which has no neat translation into English, it can mean many different things in different contexts, which are hard to reduce to a common ground:

...blat is an acquaintance or friend through whom you can obtain some goods or services in short supply, cheaper or better quality. Also blat is a reciprocal relationship, which people call „Ty-mne, ya-tebe“ (You help me, I help you). Blat is about using informal contacts, based on mutual sympathy and trust, that is using friends, acquaintances, occasional contacts. Blat also takes place when one arranges a good job for another, or where, on otherwise equal conditions, the one who is known or recommended gets chosen. Sometimes blat means influence and protection, all kinds of „umbrellas“ (kryshi), using big names – so called „I am from Ivan Ivanovich“ – introductions (Ledeneva 1998: 34).

Thus, blat is a form of non-monetary exchange, a barter based on personal relationship. The objects of blat are not a direct exchange, but an exchange of favors over prolonged period of time provided at public expense. Moreover, blat exchange is often mediated by a rhetoric of friendship, of mutual support of friendly care (Ledeneva 1998: 37). In Ledeneva’s view, blat was the „reverse side“ of an overcontrolling Soviet state, a response to the structural constraints of the Soviet system of distribution and shortage and most of blat practices withered away, when the shortage economy was replaced with the shortage of money (Ledeneva 1998: 3). Many elements of blat are gone, but principles of its functioning, the ways people acquire scarce resources or services or evade law for their benefit remain.

In her next book „How Russia Really Works. The Informal Practices that Shaped post-Soviet Politics and Business“ Ledeneva analyses the informal practices of post-Soviet times, such as krugovaya poruka (joint responsibility), a variety of scheming business and law enforcement, including double bookeeping, bribery, intricate privatization schemes, and corporate governance. These post-Soviet practices are more exclusive than the wide-spread practice of blat and are
limited to closed circles of professional elites and individuals who understand one another (Ledeneva 2006: 4).

In Post-Soviet Russia, claims Ledeneva quoting data by INDEM, 2.8 billion $ per year is paid in bribes by private citizens, only 10% of which is the „household corruption“, while business corruption constitutes 90% of bribes spent for export licencing, quotas, tax transfers, privatization deals and servicing debts to the federal budget (Ledeneva 2006:2). Informal practices exist in every society, but predominate in the environments, where „formal rules and informal norms are not synchronized and where rules of the game are consequently incoherent, where laws are applied unevenly and arbitrarily, where executive power dominates prosecutors, police, and often courts. The stability is preserved by means of an informal order, guaranteed by mutual control exercised within informal networks or the ties of krugovaya poruka – a key term in explaining how the Russian politics work (Ledeneva 2006: 90).

Krugovaya poruka presupposes mutual responsibility for common undertaking, when individual is part of a bigger system, of inner circle, where he is encouraged to seek protection and repay favors in a long-term relation of mutual dependency and where governance is „by flexible ethical standards rather than by strict rule of law (Ledeneva 2006:113). „Corporatism“ - another term of Post-Soviet political-economic reality is used to denote two things, first „whom an opportunity will be given to“ and second „trust aimed at reducing the complexity of an unstable and high-risk environment“ (Ledeneva 2006: 211).

The informal networks, networks of interests and networks of control, ensuring trust and reducing risks are in fact indispensible in post-Soviet Russia. So they are in post-Soviet Ingushetia and Chechnya (Ledeneva 2006: 211).

The analytical concepts of trust network, krugovaya poruka, corporatism, blat and access networks proposed by Tilly and Ledeneva will help explain the social mechanisms of political networking within the process of state-building in Vajnakh societies. Based on my knowledge of the local context, I hypothesize that four internal constrains may have an impact on the nature of
ties within the government: 1) the system of checks and balances, which is conducive to controlling for nepotism, 2) organized opposition, which serves as a watchdog against governments’ misuse of arbitrary appointments and 3) the environment of risk, both risk of physical elimination or risk of prosecution for committed economic crimes are conducive to tightening and strengthening elites’ inner circle. I will test this hypothesis in the subsequent chapters.

Conclusion

This chapter outlined social science approaches to the problem of late state-building and its interaction with informal patterns of social integration, and positioned my thesis in the classic and current literature, debates and methodological frameworks. After reviewing state-centric studies of state-building, classical and contemporary literature on modernization, democratization and consolidation, I argued that despite many valuable insights this body of literature cannot explain state-building in non-western, late-coming, fragmented polities.

I focused on the „state-in-society“ approach by Joel Migdal, which views state as one of the social organizations, but argued that clan politics literature on Central Asia and Caucasus which developed as part of this approach misplaces its focus when studying political integration in the region as based on clans. I analyzed the main debates in anthropology of kinship on informal politics that are relevant for my thesis, utilizing Tilly’s theory of trust networks, borrowed definitions from Granovetter’s theory of strong and weak ties and from Ledeneva’s framework for the analysis of the Russian „economy of favors“.

2. Political Order, Informal Institutions and Social Integration before Colonization and in the Russian Empire

Informal institutions are often characterized as highly resistant to change, and possessing strong survival ability. Yet informal institutions and patterns of social integration do change—and often
quite quickly (Helmke, Levitsky: 2003: 732). State policies can often give a strong impetus to change of informal actors and patterns of social integration, while they, in their turn, affect government policies. The following chapter will provide the historical context to the thesis: summarize scholarly knowledge on traditional political and legal institutions and social structures of Chechens and Ingush and the process of transformation of informal social institutions of Teip and Vird in Ingush and Chechen societies prior to the Bolshevik Revolution of 1917.

The first paragraph deals with political order and structures of the Chechen and Ingush societies before the Caucasian War of the 19th century. I will scrutinize the issues related to specificities of Nakh feudalism, which on the one hand, helped the local communities to secure themselves from local aggressors and the colonial superpowers, but on the other, allowed Vajnakhs to preserve their largely egalitarian political structure. The chapter will also demonstrate that feudalization, loose as it was, has facilitated societal changes within and between Vajnakh teips, while economic differentiation created asymmetries of power.

The second part deals with the Caucasian War (1817-1864), which produced a major social change: the destruction of traditional economic systems, multiple resettlements, mass extermination of male population, spread of Sufi Islam, which had a strong impact on the public order and social institutions of Vainakhs. In this part I will analyze Shamil’s Imamate. The Imamate represented the first attempt to submerge competing traditional institutions and erase distinctions between various patterns of social integration, replace traditional law by Islamic law, build a superstructure on top of traditional Vajnakh structure and this way to push traditional institutions into the domain of local issues, limited to village communities.

By bringing historical sources, the chapter argues against the claim of the unchangeable nature of Vajnakh social institutions and shows that clans (teip) had deteriorated already by the end of the 19th century. It also shows that Imam Shamil managed to impose a state structure that was rather autonomous from the society and thus to draw the frontier between the state and society. The
chapter also demonstrates how state structures had gradually marginalized primordial structures by pushing them outside the political system and this way reconfigured their functions.

2. 1. Political Order and Social Institutions Prior to the Caucasian War ( - 1817)
Proto-Chechen and Ingush tribes have inhabited the North Caucasus at least since the 1st centuries B.C (Krupnov 1960, 1971, Vinogradov and Chokaev 1966, Akhmadov 2001, Martirosian 1933, Desheriev 2006). The oriole of their settlement was immediately adjacent to the Main Caucasian Ridge, which kept the tribes isolated. At the same time, two major passageways, connecting the Great steppe with Transcaucasia and the Middle East lie in close proximity to the Vajnakh lands. Peoples and tribes who moved through these passageways brought with them new cultural impulses-novel forms of political and social organisation, more advanced crafts, weapons, items of daily household and luxury (Krupnov 1960: 45). Due to this, archaeologists claim, being at the periphery of great civilizations, the North Caucasian mountaineers had a good intelligence of technology, weapon and various forms of government.

In the 1262-late 1390s North Caucasus was the area of Mongol intestine wars and significant Mongol troops were concentrated in the area of Daryal Gorge. As a way of protection, the Nakh population migrated high into the mountains and this way remained relatively untouched by the Mongol invasions. (Akhmadov 2001: 227). In 1395 Nakhns suffered one major defeat from the legendary Timur, whose hoards went into the mountains and eliminated hundreds of Nakh villages, burnt pastures, destroyed churches and pagan heathens, killed and turned population into slavery (Akhmadov 2001:234). Some Chechen historians claim that the teips emerged at that that time. The Chechen tribes destroyed by Timur, fragmented into smaller social units and dispersed in the mountains, temporarily breaking apart in order to come back together again in better times. “The people had to save their lives and it had to instinctively develop mechanisms of self-preservation in such conditions”, explained Magomed Muzaev, a Chechen historian and
Currently the director of State Department for Archives of the Government of the Chechen Republic (Muzaev, interview 2008).

As a result of Timur’s invasion the plains were deserted and after his departure Kabardines, a semi-nomadic Turkic-speaking people, settled there. Chechens migrated back on the plain since the 16th century, while Ingush made their way from the mountains in the late 17th century overcoming strong resistance of the Kabardines (Akhmadov 2001, Kodzoev 202:148).

After defeat of the Astrakhan Khanate in 1556 the Russian Empire received access to the Caucasus, in the second half of the 16th century communities of Russian Cossacks emerged on the banks of Terek river (Shnirelman 2000:264). With the strengthening of the Ottoman Empire in early 16th century, its allies-Crimean khans – also strove to annex North Caucasian societies. In 1519 Iran conquered Georgia and in between 1524-1574 it tried to advance to the North Caucasus, Southern Nakhs were involved in Irano-Georgian wars on the Georgian side. Thus, since the 16th century North Caucasus became the object of simultaneous influence by three regional super-powers- the Ottoman Empire, Iran and Russia. Each of them tried to strengthen their positions in the region, and had its own supporters and vassals among local communities. In the 18th century the lowland Chechnya was increasingly becoming oriented towards Russia (Akhmadov 2001:328). Ingush historian Kodzoev noted the same trend among Ingush. In 1758 the first delegation of nine Ingush Elders gave an oath of allegiance to Russia in the town of Kyzlyar. By 1771 most of Ingush societies gave oath of allegiance to Russia (Kodzoev: 2002:153). Joining Russia accelerated Ingush descend to the plains. In the end of 18th century trade and economic relations with Russian towns encouraged pro-Russian orientation of Nakh societies and was conducive to the beginning of the process of their integration with the Russian state.

In 1781 there was another wave of swearing allegiances to the Russian state by Chechen societies, which in the Soviet times was represented as the act of “voluntary joining Russia” by
peoples of Chechen-Ingushetia. “This voluntary joining... of course had nothing to do with the historical truth”, claims a Chechen historian Yavus Akhmadov (Akhmadov 2001:332). According to a number of regional scholars, the first peaceful period of the Russian colonization of the Caucasus was successful: and in the 17-18th century many North Caucasian lowland and mountainous societies sought political alliances and protectionism of Russia, especially against the powerful Kabardines (Gakaev 1999:10; Kodzoev 2002:153; Tsutsiev 1998: 20-22, Akhmadov 2001). However, in their view, this cannot be considered voluntary joining the Russian state. Regardless of numerous agreements and oaths of loyalty, in the expression of Ingush scholar Kodzoev, “such agreements were concluded for extracting immediate benefits and soon after the objectives were reached, they were forgotten about... Until the end of the Caucasian war they /the North Caucasian peoples/ were out of the sphere of influence by the Russian administration” (Kodzoev 2002: 153). Russian scholar Shnirelman confirms that “Declarations of citizenship were perceived as protectorate and alliances, which could at any moment be broken, and then restored in a few years again. Moreover, such declarations could be made simultaneously to representatives of two competing super-powers (Shnirlman 2007:269)”, and at the same time to regional feudal authorities. Mountaineers viewed themselves as allies of Russia, not its subjects, while Russia presented agreements concluded with a handful of teips as accession of the entire people.

After defeating Turkey in 1774, Russia intensified its colonization efforts: built fortifications, formed thirty six new Cossack settlements, gave out lands to the Russian nobles. As a result Vajnakh pastures were expropriated, their trade and movement restricted, they were cut off their natural resources (salt deposits). In response to these advancements, Mansur Usurma, a son of a shepherd a self-proclaimed Sheikh declared gazavat (a holy war) against semi – pagan Muslims and the infidels (Dunlop: 1998:10). He strove to wipe out customary law-adat, feudalism, tradition of blood feud, and enforce Muslim law- the sharia instead.
By 1785 Mansur managed to build a force of 12,000 men. Numerous Russian troops were sent to suppress the rebellion and six years later Mansur was defeated and sentenced to live incarceration (Dunlop: 1998:11, 13). In 1807 and 1810 Vajnakh societies had to confirm their declarations of loyalty again (Shnirelman: 2007: 270).

2.1.2. Debates on the Nakh Feudalism

In the 16-18\textsuperscript{th} centuries the political organisation of Nakh societies varied. The 16\textsuperscript{th} century written sources already distinguish several Nakh “societies” (teips or groups of teips)\textsuperscript{4}. Some were in more or less formal dependency on neighbouring polities or on other regional power centres, i.e. Kabardine, Circessian, West Dagestani princes, others remained independent (Vahusht Bagrationi in Martirosian 1933, Ajtberov and Akhmadov 1982, Zubov 1835:32\textsuperscript{5}, Isaeva 1980:40). In the 1640s there emerged powerful indigenous Nakh feudal polities, such as a polity of Chechen princes Turlovs and the princedom of Braguny as well as strong Ingush teips Targim, Khamkho and Egi who formed a tribal union “\textit{g1algaj}” and controlled the strategic basin of the Assa river (Akhmadov 2001, Umarov 1980). They sprang their political and economic power to most of Ingush tribes and gave their feudal self-name “\textit{g1algaj}” to the entire Ingush people (Umarov 1980, Skitsky 1959, Martirosian 1933).

The nature of feudal dependency in Nakh and generally Caucasian societies was different from the classical feudalism. There were no personally dependent serfs, but in the 17-18\textsuperscript{th} centuries Nakhhs often invited princes to govern their communities and ensure protection, oftentimes from the powerful \textit{Kabardines}. The first author who described the specific features of “mountain feudalism” was a Russian traveller I. Herber, who in 1728 wrote about Kabardines: “The owners…divided themselves among several small fiefdoms… But it is not possible to call those who live in such fiefdoms /their/ subjects, more frequently they are called comrades, since they

\textsuperscript{4} Nakh-Mokh, Michich, Chamberloy, Shatoj, Myalkhi, Majsty, Nashkhoj, Chianti, Merzhoj, Akki, G1alga1, Dzejrakh

\textsuperscript{5} The Picture of the Caucasian land, belonging to Russia and lands adjacent to it in historical, strategic, ethnographic and trade relations. St Petersburg 1835 p.32.
live freely with the prince... and leave this prince and join others, if he quarrels with one of them. Also without advise and consent of those who live with him... he can do nothing , however, princes and their comrades do not leave each other in the time of need and stand together” (in Kosven and Khashaeva 1958: 68). Any member of the community could raise an issue of community relevance for public deliberation. Decisions were taken either during skhod – public gathering of all men, or by the Councils of Elders.

Ethnographer Golenischev-Kutuzov described such gatherings in the following manner: “Haphazardly were people called to these Chechen gatherings: somebody of the residents, who has decided to talk about an important issue, would climb the roof of the mosque and from there he would call the people…Idle men would run to his voice, soon the entire male population of the village would follow, this way soon a community gathering would emerge in the square in front of the mosque. When the proposition, made by the initiator of the meeting was not worth of attention, the crowd would soon leave without indignation at the perpetrator of the public peace (in Leontovich 1883: V.2:83)

Princes, who governed Nakh societies performed the function of contracted protectors or foremen (Laudaev 1872, Bronevsky 1823, Akhmadov 2001). They were responsible for military campaigns, relations with other communities, economic well-being of the society. If the leader performed badly or quarrelled with someone or abused power or if the geopolitical situation called for new allies, the leader could be replaced or expelled and feudal loyalties shifted.

In the 18th century there occurred what contemporary Chechen historians call “democratization of the society”, when feudal lords were expelled from Ingushetia and Chechnya (Laudaev 1872, Martirosian 1933, Akhmadov 2001, Bliev and Degoev 1994, Isaeva 1977, Dettmering: 2005). A similar process of expulsion of feudal lords was registered among Shapsugs, a people residing at the Black Sea around the same time (Khazarov 1992:125 in Dettmering 2005: 475).

Scholars have different interpretations of this de-feudalization process in Vajnakh societies. Some authors claim that princes were expelled because when trying to establish authority they
attempted to limit the personal freedom of Chechens (Akhmadov 2001). Others, like Said Akhmet Isaev, emphasized the assertive advance of the Russian Empire as the decisive factor: princes were no more able to fulfil their main function of protectors and had to leave (Isaev: 1999). Laudaev claimed that the princes left because Chechens did not comply with their orders, relatives defended perpetrators of law, and princes had no mechanism to make Chechens obey (Laudaev 1872). In any case “Chechen” princes disappear from sources “well before the dawn of the 19th century” (Dettmering 2005: 475).

Understanding the social order of Vajnakhs and degree of feudalization of the Nakh societies is important for the analysis of their social institutions, such as teips and the problem of social integration. Deep feudalization would have transformed the egalitarian structure of teip, the rule of Elders and sacrity of customary law- the adat. But in fact to some degree feudalisation reinforced teip identity since as some scholars claim, feudal differentiation went along family lines particularly in Ingushetia.

Khristianovich quotes a story of the Ingush Salgiev teip, which is suggestive: “15 generations ago …the clan of Salgievs moved out of Tsorinsky society as a result of density and occupied…the territory of the current community Salgi. When they needed to construct a tower to protect their land, they rented-sold part of the territory to the clan “Gu”. Despite the fact that the latter bought their land, Salgi clan considered Gu to be their lej, i.e. vassals” (Khristianovich in Martirosian 1933: 30). Early 20th century historian Ivanenkov wrote that in Chechnya the right of property was based on the “first-come-first take” principle, which existed since the ancient times (Ivanenkov 1910:16, 48). Those who had developed and cultivated virgin land held personal and hereditary rights to it (Zelkina 2000: 22). Having occupied or cultivated land, a teip could rent or sell part of it to other teips, and consider them their dependents.

Differentiation occurred not only between teips. Magomed Mamakaev, the most influential Soviet scholar of teip, claims that already in the 16-17 century teip ceased being that “wonderful organization where everyone was equal and disputes were resolved by the collective of people,
whom it affected” (Mamakaev: 1973:7). As a Soviet historian, Mamakaev explained Vajnakh teip, based on the Marxist sociology of tribe. The main means of production of tribe - land - was owned collectively. As agriculture developed collective property impeded production and land was now owned by extended families. The tribe fragmented into extended families and family communities, which in their turn gradually decomposed into individual families. This way a tribal community was replaced by a village community, where the arable land was in private property, while forest, pastures remained collectively owned (quoted in Martirosian 1933:26). According to Mamakaev, in Chechnya this process was complete in the 17th and 18th century. Although the expansionism of feudalizing families encountered stronger resistance on behalf of the rest of the mountaineers, “the historical development happened steadily along the lines of increasing of feudal property at the expense of community lands” (Mamakaev:1973: 7). Scholars Kusheva and Usmanov noted two parallel processes unwrapping inside the Vajnakh communities at that time - strengthening of rich teips against the weak ones and social differentiation inside teip, i.e. the the emergence of teip elites (Kusheva and Usmanov 1978: 110). According to Soviet scholars, teip deterioration was economically driven. In 1931 Soviet researcher M. Kosven proposed a theory of *patronymia*, which he later developed and turned into quite an influential Soviet methodology for the analysis of North Caucasian kinship structures. Kosven defined *patronymia* as a group of families, which emerged as a result of segmentation of family community and which to some degree retained their economic, public and ideological unity (Kosven: 1964:1). Patronymia emerged in tribal conditions but it survived the subsequent formations, and with the development of the society it underwent deep transformations, from archaic tribal form to the state of decomposition and finally to the “remnant” condition (Kosven: 1964:2). Patronymia grows and divides, thus giving birth to a complicated structure of small and large patronymias, which resemble concentric circles or groupings (Kosven: 1964:2). Patronymia decomposes since its history is a process of gradual and inevitable development of private
property, while retaining some degree of collectivism (Kosven 1964:5). Ideological dimension of
patronymia was maintained by participation of all its members in celebrations and important
family events - weddings, births, funerals which kept the identity strong (Kosven 1964:7).
Kosven considered Chechen and Ingush teips to be an example of patronymia (Kosven: 1961:38,
45).

Figure 2.1. Chechen teip structure, 19th century (M. Kosven’s theory)

Mamakaev disagreed with Kosven’s definition, saying that the Chechen teip has never been
perceived as a relatively small group. According to him, patronymia is still a rather small group
of closely related kin, while teip is a complex and numerous structure, consisting of branches
named gaar, which unlike teip always knew the name of its real forefather. gaar in its turn was
divided into still smaller groups- nek’, nek’ is divided into several tsa, tsa into several dozal
(Mamakaev 1973: 12). Dozal was a nuclear family. New branches open only along male kinship
lines. Mamakaev thought that Chechen “gaar” (lineage) could be defined as Kosven’s
patronymia in the 17th century.

Figure 2.2. Chechen teip structure, 19th century (M. Mamakaev’s theory)
Robakidze, who worked on the Chechens and Ingush using Kosven’s methodology, explained that in the process of growth patronymia and its territorial unity were decomposing, with other types of ties binding its members decomposing as well. Thus, a patronymia of the first order, produced patronymia of the second order, this way concentric circles were created, characterized by decreasing intensity of kinship as the number of relatives multiplied (Robakidze 1968:3). In his view, dozal (nuclear family) in the process of segmentation created patronymia of the 1st circle- nek’ and second circle - gaar. Gaars made up the teip, - a group of people united by real or imaginary kinship (Robakidze 1968:4).

In his essay “Chechen Tribe” 19th century the Chechen ethnographer Laudaev explained the division of teip into gaars and neks by demographic expansion of families. “In the ancient times when the clans were not numerous, they were not divided into parts and had one name and constituted something like one family, but as the number of family members grew they divided into “gaars” and “neks”, i.e. branches and lineages. When the members of families multiplied to
such an extent that it was difficult for them to live on the land of their forefathers, they looked for other places, and started dividing and became unknown to each other (Laudaev 1872). In Laudaev’s view weakening of kin ties was a result of natural population growth.

According to Kosven, patronymia could have also transformed as a result of mixed residence with other patronymias. In archaic past patronymia occupied a separate settlement, subsequently it could spread to several related villages, and finally patronymias created neighborhoods in large complex settlements (Kosven 1968: 3). In settlements where several patronymias lived together – “neighbor’s community” would emerge (sosedskaya obshina) and the main principle of integration becomes territorial (Kosven 1968:9).

According to Laudaev, having expelled the princes and occupied plains (16-17 centuries- E.L.) Chechens founded big settlements, where several teips lived together. First big multi-teip settlements of Ingush emerged in the 18th century (Kodzoev 2002:148). These settlements encouraged territorial principle of integration.

Soviet social theory, heavily economically deterministic, explains some elements of loosening of the teip ties. From the sources so far quoted it is clear that even before the beginning of colonial wars, which caused major social change, the teip represented a complicated social structure, whose members were united in complex structures of kinship, some of which was real but others were imaginary. Teip underwent processes of feudalization, expanded in numbers, it resettled and branched over territories, mixed in big villages with other teips, this way loosing its initial structure. Mamakaev concluded that although Teip was deteriorating since the 16th century, its unity was maintained by the lack of statehood and conflicts with neighbors. (Mamakaev 1973: 22).

2.1.3. Proto-national political institutions and law: Mekhk-Khel, Tukhum and Adat

In his essay on Chechnya and Chechens Alexander Berge reported: “in the old times, say the Ichkerian Elders, when the Chechen people was not yet numerous and lived in the mountains…”
all disputes were resolved by the elders; the elders at that time were clever, they lived long and knew many things and always resolved disputes fairly, according to their wisdom, without guidance or any law.” (Berge 1858:72, 73). But in end of 16-17 centuries was the period of distemper and intestine wars between Chechen teips, when the authority of Elders was not respected. The decisions of Elders since they had no executive authority to enforce these decisions were not always implemented and were sometimes arbitrarily neglected (Berge 1858: 73). Strong families denied the competence of the Elders, so these decisions were just for the weak families (Laudaev: 1872).

According to Chechen legends that the seniors tell until today, in the midst of distemper a Congress got together in the mountainous area of Nashkh and at this Congress agreements were reached which regulated the internal relations between Chechen teips. Since then Mekhk-Khel (the Council of Land) was called for regularly and among other things elected military leaders, who in the times of war received almost unlimited military power. Mekhk-Khel had judiciary, legislative and executive authority. “The Council of land discussed customs and laws of the various provinces which depending on their economic and legal utility were generalized and later dissolved in the rest of the lands” (Mamakaev 1973:44).

Mamakaev claims that Mekhk-Khel was elected according to a pyramid system from representatives of various teips and settlements. However, several of seniors whom I interviewed remembered that their grandparents told them that Mekhk-Khel was elected both on teip and territorial basis:

My grandma was over a hundred, when she died in 1984, and she said that 12 people were selected from Ingushetia to Mekhk Khel. First each teip in a given village selected its best representative. Then among those teip representatives the best was selected from the village, and then from among villages the candidate was chosen to represent the region. No accidental people turned up there. These were the best of the best and the most respected. Idris Chapanov, Achaluki village, Ingushetia
Apart from Mekhk-Khel two thirds of teips were united into nine tukhums –military –political units. The remaining one third of the Chechen teips each formed their own tukhum (Mamakaev 1973). Teips referred to as Ingush formed five more tukhums, the most numerous was Ghalbaj (Zelkina 2000: 17). Tukhum was a territorial organization, ruled by a group of Elders – representatives of all teips, aimed to solve common issues of security and economic exchange, to resolve disputes among teips on the basis of customary law- the adat (Mamakaev 1973: 16).

Chechen justice was also partly based the Islamic law- the sharia. The two systems of law were competing: “adat spread and strengthened each time when Sharia was in decline, and on the contrary adat was abolished each time when Sharia found zealous proponents and followers” (Berge 1859: 74).

2.2. Political Order, Social Change and Social Institutions during and after the Caucasian War

In 1801 Georgia was annexed to Russia which resulted in a situation when, according to the frequently quoted metaphor by Karl Marx “the legs of the gigantic empire were cut off its body”. Russia needed to subjugate the North Caucasus, and St Petersburg went for a hard-line approach. This section will analyze the impact of the Caucasian War (1818-1864), which produced a major social change in Nakh societies: the destruction of traditional economic systems, multiple resettlements, mass extermination of male population, spread of Sufi Islam, which had a strong impact on the public order and social institutions of Vainakhs. In 1840-1868 the first attempt to build a regular Islamic state was successfully undertaken by Imam Shamil. This natural experiment was a blunt by the Russian invasion, but played an important role in reshaping the traditional social institutions.

2.2.1. The Beginning of the Caucasian War

6 Akkiy, Melkhiy, Nohchimakhoy, Terloy, Chantiy, Cheberloy, Shaory and Shoatoy, while the Ortskhoy (or Qarabulaq) occupied a midway position between the Chechen and the Ingush and was regarded as a separate group
7 Zurzuqoy, Maistoy, Peshkhoy, Sadoy etc.
The beginning of the Caucasian war was linked with the name of Alexej Yermolov (1777 - 1861), a notorious Russian commander-in-chief who characterized the Chechens as ‘a bold and dangerous people’ who required a special approach.\(^8\) Yermolov’s special approach became the first tactic of anti-guerrilla war in the Russian history, which in order to eliminate combatants targeted the population supporting them (Zubov 1836: 1). In May 1818 he sent the Russian Tsar Nicholas I a detailed plan of military campaign, which stipulated the establishment of lines of Russian military forts along the lower part of Sunzha river and construction of Cossack settlements between the line and the Terek river, forcing Chechen societies from their fertile lands back into the mountains and “military economic siege” (Gammer 1998: 58, Bliev, Degoev: 1994). “Having lost their land suitable for cultivation and pastures… Chechens will be squeezed in the gorges of… mountains” and “without tillage and pastures where their cattle is spending winters in the period of severe colds, they will have nothing to do but to reconcile themselves with the rule of Russia” – wrote Yermolov (Gammer 1998: 58).

In 1817-1819 Yermolov built a line of Cossak settlements occupying fifty kilometer territory, and a number of military redoubts, including Nazran in Ingushetia and the fortress Groznaya in the center of Chechnya (Bliev and Degoev: 1994: 174).

Each autumn Yermolov destroyed fields of maze exactly when the crops were harvesting. This was intended to starve the population into submission (Baddeley 1908). He pursued a policy of collective punishment: if the Russian commandment established that an individual Chechen took part in an attack on Russian soldiers or Cossacks, his village had to hand ‘the bandit’ and his family over to the Russian authorities. If they refused to do so, the village was levelled to the ground (Dunlop 1998: 16). In Yermolov’s own description: “Protesting villages were ravaged and burnt, orchards and vineyards were eradicated to root… we investigate whether the people resisted /guerillas –E.S. / and whether among them there were people killed in the battle or whether they allowed the swindlers to pass without resistance, in the latter case the entire village

\(^8\) Yermolov’s report to Emperor Alexander I, as quoted by J. Dunlop, *Russia Confronts Chechnya* (Cambridge, 1998), p. 15.
was exterminated, wives and children slaughtered” (in Bliev and Degoev 1994:152). Eventually Chechens stopped defending their villages, when the troops approached their homes and together with women, children and cattle moved to the forests (Gammer 1998: 65, Bliev and Degoev 1994:178). Ingush societies were considered more “peaceful” and were not directly involved in the war. Nonetheless, unrests and uprisings took place in Ingushetia, too, and the policy towards them was similar to what was done in Chechnya.

Yermolov’s policies caused large-scale social change in the life of Chechen and Ingush mountaineers which had an unprecedented impact on their political order and social institutions. “The siege of some mountaineer communities, expropriation of land from the others, expulsion from the pastures in pre-mountains destroyed the traditional forms of goods exchange… the residents of the mountains could not provide for all their needs and largely depended on these economic ties and the existing production systems” (Gammer 1998:71). Perpetual emergency situation and frequent resettlements disrupted the normal functioning of traditional institutions- free gatherings for discussion of village affairs- shod, adat trials; but strengthened the prominence of supra-teip institutions- tukhum Councils, Mekhk-Khel, which before Shamil’s arrival in 1840 had to be called for frequently in the rapidly changing circumstances. Emergencies, forced migration increased the strengthened kin solidarity.

By 1839 it looked like the mountaineer resistance was suppressed. The Russian administration in the Caucasus appointed police officers to villages, mainly from loyal locals, collected taxes and duties (Gammer 1998:163). However, abuse of power by the state representatives was frequent, Chechen resentment was growing.

In 1840 Chechens raised an uprising and invited Shamil, a famous military leader from Dagestan, to lead it. Shamil was “perhaps the most outstanding political and military leader ever to emerge in the North Caucasus Region” (Dunlop 1998:24). “Unlike previous leaders, he not

---

9 in September 1839 Shamil suffered a major defeat at Akhulgo (Dagestan) after that Shamil’s prospects in Dagestan looked rather bleak.
only defied the Russians but held the resistance together for almost three decades of unbroken warfare against the army which had defeated Napoleon (Smith 1998:45). Shamil was a tough leader, he offered mountaineers a stern life, strict rules of the Islamic law and a constant war against invader-regardless of cost (Smith 1998:46). In Chechnya Shamil strove to wipe out customary law - adat, erase clan distinctions. His primary goal as an imam was enforcement of sharia rule, he “used Islam and personal ruthlessness, to reach across the deep tribal divides and create an alliance of Moslem highlanders” (Smith 1998:45).

The military strategy of Shamil was to constrain the adversary on his territory, which he knew well, to wear the adversarial troops out by long marches in the mountains and then to attack. Shamil used the tactic of resettlements and “burnt land”. In 1940s he started what Gammer called a “demographic war”: organized mass resettlement of people from the areas bordering the Russia-controlled regions to the lands under his control and burnt the territory in between. This produced a circle of burnt land, which created significant obstacles for the maneuvers of the army (Gammer: 1998). Thus, both sides of the conflict caused forced migration to the population. In a rapport to the commander of the general staff headquarters of the Caucasus Dmitry Milutin, Orbeliani states that „In entire Chechnya there is no village, no household left which would not be several times resettled from one place to another“ (Orbeliani in Martirosian 1933:68).

In the place of Vajnakh settlements new Cossack villages- stanitsy- were built: five of them were founded on the territory of Chechen settlements10 (Gritsenko 1971:14). The entire central part of Ingushetia was forcefully resettled in 1859-1861; instead thirteen Cossack settlements with 200 families each were founded. Ingush societies were locked between the mountains and the Cossacks, artificially divided into lowland and mountainous parts, which destroyed the existing mutually reinforcing lowland and mountainous economic systems (Tsutsiev 1998: 29). Ingush

10 Ermolovskaya, Groznenskaya, Samashkinskaya, Petropavlovskaya, Zakan-Yurtovskaya etc
were also isolated from Chechen, which further accelerated divergent paths of their development and distancing of the ethnically close societies.

After a major Nazran uprising of 1858, a policy of “enlargement of settlements” was carried out in Ingushetia, whereby small Ingush villages were destroyed and their residents resettled to larger villages (at least 300 households each), which was aimed at better monitoring of the population. Police was stationed in settlements and roads leading to the territory under control of Shamil were destroyed (Gammer 1998: 253, Martirosian 1933:68).

_The traditional system of settlement and economy were crashed after the 1858 Nazran uprising. In fact, this is when the teip system had been broken. Before that we lived in individual households, were engaged in agriculture and maintained traditional self-rule, and in the process of enlargement of settlements we were all merged together. Demography also played a role: teips were growing, parts of them branching out, becoming distant and finally inter-marrying._

Nurdin Kodzoev, Ingush historian

2.2.2. Shamil’s Imamate

On the lands under his control Shamil established a theocratic state – the Imamate (1840-1859).

The head of the State was Imam; he was the commander in arms, chief executive and legislative power (Martirosian 1933:63, Gammer 1998: 306). Imamate was divided into provinces (naibstvo), each of which was governed by a naib – deputy of Shamil. Naibs had executive and military power. They collected taxes, implemented decisions of sharia courts, monitored compliance with Shamil’s orders and recommendations, prevented internal conflicts and blood feud (Gammer 1998:306, Bliev and Degoev 1994:384). Naib was responsible for military trim and commanded his people in the times of war. He usually had 100-300 warriors- murids, on top of it each naibstvo had 500 local village horseman murtazeks (Berge 1859: 86). Shamil used murtazeks for executions and extra-judicial killings, which made them personally dependent on Imam for protection against vendettas (Bliev and Degoev 1998: 407). Naibstvo was divided into sub-regions, with a mazum in charge of each region (Berge 1859: 87). A mazum usually commanded a hundred of warriors. He monitored the Elders of villages. In the end of 1940s a position of mudir was introduced. Mudir was standing above several (3-5) naibs, reported on

---

11 Initially Chechnya and Dagestan were divided into 17 naibstva, subsequently they were 32.
them to Shamil and commanded them in the battlefield (Bliev, Degoev 1994:385). He also performed the functions of naib in his place of residence (Gammer 1998:308).

The religious authority in every naibstvo was with mufti and several qadi. Qadi was responsible for the maintenance of the mosque, he was leading the prayers, including the *hutba* -Friday prayer - resolved disputes and observed that the segregation lived in accordance with laws of *sharia* (Gammer 1998: 308). Mufti was the highest religious authority in a given naibstvo. He appointed qadis, monitored their activity and decisions (Gammer: 1998:308). In sub-regions the disputes were resolved by mullahs (Berge 1859:87). Mufti eradicated digressions from sharia either himself or with the help of naib (Gammer 1998:308).

For monitoring the naibs and mudirs and for collecting parallel information, Shamil created an institution of mukhtasibs, *i.e.* inspectors for implementation of sharia. Sometimes Imam carried out inspections of naibs himself (Gammer 1998: 307).

In 1840s regular army of the Imamate was created. The population had to provide the army with one armed horsemanship- murtazeks- from each ten houses. Murtazeks were village militias who patrolled neighborhoods, participated in military actions and were under the command of mazuns (Berge 1859:87). The army of murtazeks was numbering around 3,000 and was evenly spread throughout the country (Berge 1859:87).

In 1842 was established a Secret Council - Divan consisting of two most trusted associates of Shamil, whom he called for when most important decisions had to be taken (Gammer 1998: 306).

Shamil collected taxes, fees and confiscated property of executed criminals. Much effort was invested in imposing sharia. Sharia was supposed to replace local adat, which Shamil abolished and issued a set of laws related war and interpretation of certain sharia norms, known as Nizams, where he replaced mutilating punishments for crimes to fees and threatening punishments (Berge 1859: 85, 87).
Shamil’s state was despotic but his authority was limited by norms of sharia, moreover, being a Sufi he was accountable to his spiritual leader (murshid) - Dzamaladin Kazikumuksky.

By the end of Shamil’s rule Chechens felt burdened by his despotic order and were disappointed with him (Berge 1859:89). The state founded by Shamil was dictatorial, and the stronger was the pressure of the Russian troops the tighter was its grip. On August 25, 1859 Shamil’s and his groups were besieged by the Imperial troops in the Dagestani village of Gunib, the situation was hopeless and Shamil surrendered to the Russian authorities. Eventually he accepted the Russian citizenship, was granted the title of a Russian noble, and died in 1861.

Shamil’s state caused a true revolution in the social structures of mountainous societies. Fragmented tribes and peoples were united by a centralized state, with common legal norms, complex apparatus of government, unified military-financial organization and to some extent a regular defense of the country. This was the first statehood ever experienced by Chechens, and introduced the model of the Islamic state, which will ever since be present as one of the options of statehood, that part of the population would strive for. Ingushetia was not part of the Imamate and does not have such pattern in its history.

2.2.3. Political Structures and Informal Patterns of social integration during the Caucasian War and Shamil's Imamate

The Caucasian war produced a dramatic social change which had an impact on Nakh social institutions. According to Mamakaev, teip was still the main political unit in the 19th century. He counted 135 tight strictly exogamous groups, which shared 23 main characteristics, the same ones that Morgan found studying an Iroquois tribe, such as, inter alia, a common ancestor, a common tower, common ownership of land and family cemetery (Mamakaev 1973:33).

Mamakaev’s model was challenged by scholars on many points: first, authors managed to successfully prove that the teip was not exogamous by that time anymore; moreover, sometimes neither was the gaar (lineage). Second, historians could show that the collective property rights were within the gaar, not within teip by the 19th century (Dettmering 2005, Gantemirova 1981:8-
Moreover, during the Caucasian war teip was further dispersed among various settlements. Settlements became increasingly mixed, allegedly even in the mountainous area, which destroyed the monolithic political structure of teip (Dettmering 2005: 474). According to Martirosian, the process of intra-Teip differentiation continued, along economic and ideological lines. Both the Russian commandment and Shamil “bought” the loyalty of local elites. Those who supported them received lands, salaries, presents, war trophies and other economic benefits. The Caucasian war produced an ideological divide within teips. Some were supportive of Shamil’s stern Muslim order and sharia; others were on the side of Chechen traditions, adat and individual independence (Martirosian 1933).

Imamate of Shamil was the first state structure which tried to submerge traditional Vajnakh institutions, enforce a different legal order (the sharia) and build a government superstructure over Vajnakh societies, which was different from their own loose system of self-government by local communities and teips, coordinated by supranational organ (Mekhk-Khel), which met on an irregular basis.

*Mekhk-Khel* continued to function in Chechnya in early years of the Caucasian war before the uprising was headed by Shamil. In different documents we find traces of Chechen leaders asking for the consent of Mekhk-Khel to start or continue war with Russia (Musrailov 1998). According to Chechen historian Magomed Muzaev, during Shamil’s reign *Mekhk-Khel* was pushed underground. Subsequently it co-existed with the Russian administration as a parallel authority. Islamization during the Caucasian war turned it also into a religious institution; leaders of *Mekhk-Khel* were the famous mullahs and Sheikhs. “Mekhk-Khel was an institution which

Figure 2.3. State and Society during Imamate of Shamil (1840-1858)

*VE-village Elders, q- qadi, tp-teip*
changed with time, but usually it was the organ of underground resistance” (Magomed Muzaev, interview). Thus, the Imamate started the process of differentiating the state from society, creating an autonomous state structure and incorporating or pushing other social institutions, namely teips and adat into the domain of local and private affairs. This process is reflected in figure 2.3.

Already by the time of Shamil, teip ceased being a social organism in the society, it lost its social functions and obligations. Many factors contributed to it, including the spread of Islam and the contradictions within teips and within the society. Shamil had finally broken the backbone of the teip order. His Islamic leaders were people who had no status in the teip-based society. They were nothing, who became everything, and they transformed the system of social relations. Then Russia arrived, and it again demolished what had been constructed by Islam. Magomed-Emin-Khasiev, Chechen ethnologist
2.3. The Russian State and Vajnakh Social institutions after the Caucasian War

As most multinational empires, Russia left social structures of conquered or annexed peoples and territories relatively intact being “content to subjugate them ... establishing indirect rule, and to pursue these people’s assimilation by means of long-term administrative adaptation and migration” (Simon 1991: 3). Compared to radical social restructuring of the Soviet time, indeed, Imperial state interference into community life was limited, however, several decades before the Bolshevik revolution brought about significant change to Vajnakh public order and social institutions, which was primarily caused by “land famine”

2.3.1 Land reform. Institutionalization of “dym” as a fiscal and economic unit. The Russian administration

After the war the Russian administration carried out a redistribution of land, which resulted in dramatic “land famine” in the Nakh peasant communities. Trying to “to create” local nobility, the Russian government distributed lands to respected and loyal families (Mamakaev 1973:59). Already in the 19th century there were a number of local landowners with over 500 dessiatins of land each. In addition to Cossack settlement founded earlier, this chopped off most the best fertile land in Ingushetia and Chechnya (Gritsenko 1971:14, 19).

In 1863-68 the government carried out a land distribution reform. A special Estate-Land Commission (Soslovno-Pozemelnaya Komissiya) divided land according to “dyms” – or households, which were defined as extended nuclear family, living as one household- usually comprised of the head of the family (father) and sons who lived with wives and children as separate families together with him. This arrangement was actually negotiated with the community leaders, who thought that it would be easier to deal with the head of the extended family, rather than with individuals. Land was allocated to dym, which was supposed to divide it between members itself (Gritsenko 1971) Soon, however, the community leaders realized their

---

[12] dessiatina ( = approx. 2 3/4 acres, 10 925,4 meter²)
mistake: as the families grew, the individual slots of lands decreased dramatically. In 1860s “dym” consisted of 5-8 people, in 1880 the number of people who had to share it increased at least by 30%. As a result of population growth in 1873 the distribution of arable land was the following (in dessiatins per person): Cossacks- 21, 3; Ossetians – 5, 3; Ingush 4, 3, mountainous Ingush - 1, 6 (in Kodzoev 2002:171) Chechens - 1.2 (in Mamakaev 1973: 59).

Land reform and fiscal policies elevated and economically institutionalized nuclear extended family – individual household or “dym” which was now the main economic and fiscal unit. This accelerated the fragmentation of gaar and nek into individual 2-3 generation households (father-sons with wives and children).

2.3.2. Enforcement of Russian institutions and law. Involvement in new sectors of economy

After the war for a short time village foremen were elected but soon they were appointed by the Russian administration. In 1852 “Chechen Court” /Mekhkme-Chachani/ was established in Grozny. This court consisted of qadi, who resolved disputes according to Islamic law- the sharia, and three Elders, who knew customary law – the adat and carried out justice according to it. The Court was presided over by a field officer (Berge 1859: 80). Adat dealt with the crimes such as theft, arsons, injuries, insult of women. Sharia was applied in cases of murder, division of property, divorce (Berge 1859: 81). However, Berge noted that since 1958 after the new Regulations on Government of the Caucasian Army were issued, the application of sharia was minimalized to the issues of faith and consciousness (Berge 1859:82).

Land reform and “land famine” caused change in employment patterns of Chechens and Ingush. To cope with land deficit mountaineers had to rent land and pastures from Cossacks or to look for jobs in the vineyards of Kyzlyar, or oil refineries in Grozny, which were opened in 189314, or to offer themselves as construction workers or craftsmen in other bigger settlements on the plain.

With the discovery of oil, Grozny turned into a major industrial center – oil extraction, processing industries as well as mechanical engineering and transport enterprises were

\[14\] in “Starye Promysla”
mushrooming with the inflow of Russian and foreign capital. European, particularly British oil companies bought shares in Grozny oil business and invested in technologically advanced production. Most of workers at factories were Russians, but gradually Chechens joined the profession, first as unskilled but increasingly as skilled labor. 1914 Chechen entrepreneurs founded “Staroyurtovskaya Neft” Oil Company, which was a modern and efficiently run joint stock enterprise (Kolosov 1964:45).

Employment outside the community opened up isolated Chechen and Ingush societies, made them learn languages, acquire skills, and at least temporarily get out of the habitual social structures. The social organization of the community where many male members seasonal jobs elsewhere transformed gender roles, women started to play a more prominent role in managing individual households.

2.3.3. New Pattern of Social Integration: Tariqas and Virds

Teip was not the only pattern of social integration, which shaped the political order and social institutions of 19th century Vajnakhs. Tariqas and virds – Sufi Muslim brotherhoods- spread to North East Caucasus during and after the Caucasian war and they became a conspicuous political and social factor in Chechen and Ingush societies.

*Tariqa* - is a mystical way to God which a Sufi Muslim believer (*murid*) makes under the leadership of his spiritual teacher (*murshid*), with whom he should be in a constant spiritual connection (Akaev 2004;10). The leader of the tariqa - Sheikh usually appointed a successor during his life, who got an official permission (*idzhaza*) for continuing the *tariqa* or for founding his own sub-order (Akaev 2004:11). There exist 12 main Sufi tariqas in the Islamic world\(^\text{15}\), two of which- are represented in the North Caucasus.

\(^{15}\) *Rifaija, jasavija, shaziliya, sukhravardiya, chishtiya, kubraviya, badavija, maulaviya, bektashiya, khalvatiya, naqshbandiya*. Akaev 2004: 10
Sheik Mansur, who led the first major uprising against Russia in the 18th century, is thought to be the first leader of Naqshbandi tariqa in Chechnya. Subsequently Naqshbandi tariqa was spread by Imam Shamil.

Qadyriya tariqa (the zikrists) spread in North Caucasus due to the teachings of a Chechen preacher Kunta-Khadzi Kishiev. He started preaching in the 1950s when the great Caucasian War was coming to its end. Kishiev called for peace, humility, social justice, non-resistance to evil by violence, which appealed to mountaineers exhausted by war. Kunta-Khadzi proposed an ideological program of survival in dignity— a teaching of passive resistance to authorities through spiritual preservation:

“If they tell you to go to the church, do so: churches are only buildings and in our souls we are Muslims. If they make you wear crosses, wear them, as they are only pieces of iron, and in your soul you remain Muslim. But! If your women are used or abused, if you are forced to forget your language, culture and custom, raise and fight to death, till the last man!” (in Kodzoev 2002: 167).

This program resonated deeply among mountaineers exhausted by protracted war, in the 1860s, both Chechens and Ingush en-masse abandoned Naqshbandiya and joined the new tariqa. In late 1850s Ingush converted to Islam. Kunta-Khadzi was very successful among Ingush societies, which was a clear reaction to colonial expansion and protracted war. Ingush like to emphasize that Imam Shamil was unable to convert them to Islam “with his sword”, but preacher Kunta-Khadzi was successful “with his word”.

In 1860s zikrists formed a religious structure on top of which was the Imam and two sheikhs (religious authority), who commanded naibs, vekils and murids (executive authority), from the latter the village foremen were elected (Akaev: 1994). “Soon all Chechnya, Nazran and a great part of upper mountain societies were covered with this clandestine teaching as with a tight net” (Ippolitov 1836:37 in Akaev: 1994). Zikrism was getting politicized, and largely reproduced the organizational structure of Shamil’s Imamate, which suggests that Shamil’s institutions had taken root in the Nakh societies. Tariqas and virds cut across teips and became powerful patterns of social integration, very relevant to political processes of the 19th century.
Conclusion

This chapter reviewed the main findings of ethnographers and historians on informal institutions and patterns of social integration in Ingushetia and Chechnya until the Bolshevik Revolution. It sketched out the function of traditional Vajnakh institutions of teip, tukhum, Mekhk-Khel and customary law (the adat) before the creation of Imamate of Shamil, scrutinized the issues related to specificities of Nakh feudalism, which helped the local communities to secure themselves from local aggressors and the colonial superpowers, and at the same time allowed Vajnakhs to largely preserve the egalitarian principle of their political organization. The chapter argued that loose as it was, the mountaineer feudalism facilitated economic and political inequality within and between Vajnakh teips, which in Ingush case was even reflected in the norms of adat.

It furthermore analyzed the impact of the Caucasian War (1817-1864) on political order and social structures of the society. Destruction of traditional economic systems, multiple relocations, mass extermination of male population, and spread of Sufi Islam had a strong impact on the public order and social institutions. I further analyzed the government structures of Shamil’s Imamate in Chechnya (1834-1859), which was the first attempt to submerge competing traditional institutions, replace traditional law by Islamic law, and build a superstructure on top of traditional Vajnakh structure and this way to push traditional institutions into the domain of local issues, limited to village communities.

Between the Caucasian War and the Bolshevik revolution the local communities started the integration process into the Russian political and social system, relative stability which came as a result of the end of war and economic development caused by the inflow of the Russian and foreign investment transformed a small layer of primitive mountaineer economy and allowed for some local businessmen to develop modern trade, industrial and agricultural enterprises. At the same time, the majority of the population was contained to closed rural agricultural and cattle-breeding areas.
In the 18th century teip as a social organization was weakened due to population growth, dispersal of teips between lowland settlements and the mountain, social differentiation and ideological cleavage; historians argue that political power belonged to the gaar, rather than teip. In the 19th century the gaar decomposed into individual 2-3 generation households, which became the unit where the economic power belonged to. Land reform and new taxation system made individual household or “dym” the main actor of the economy and fiscal unit. The political power belonged to the Russian administration, which pushed traditional Chechen and Ingush institutions and law from an increasing number of public spheres.

Despite the fact that the Vajnakh institutions of law and self-government were gradually marginalized, they still retained some official status. Adat quickly re-established its positions after years of Shamil’s prosecution. Mekhk-Khel had to go underground and became the organ coordinating resistance. In Ingushetia the policy of enlarged settlements broke the traditional life-style and self-government, by putting different teips together in one settlement it introduced a new integration logic in local communities. The emergence of new patterns of social integration- tariqas, virds, and large settlements divided teips and made the composition of Vajnakhs societies more complex.

This chapter aims to explore the effect of Soviet state-building, modernization programs, repression and forced and voluntary relocations (deportation, return, restriction on settlement, labor migration) on the social integration and informal institutions of Chechens and Ingush. It starts by analyzing the early Soviet modernization programs and their achievements, collectivization and the following wave of repression of late 1920s and 1930s. I further provide the analysis of social change which was brought about by forced deportation of 1944 and argue that the deportation fully undermined the territorial basis of Chechen kinship, further weakened the teip, but strengthened kinship solidarity, national identity, adat and the institution of Elders. I
conclude by analyzing the social change in Vajnakh society upon return from the deportation, until the 1980s.

3.1. Early Bolshevik State and the Social Change (1922-1940)

In January 1921 the People’s Commissar for nationalities policy Joseph Stalin in the name of the Bolshevik government proposed North Caucasian Muslims to found a new Mountainous Republic (in Dunlop 1998:42). The Congress demanded to create a legal system based on sharia and adat without the central government interference in mountaineer’s affairs and return lands expropriated during the Imperial rule. Stalin accepted both conditions, the Congress formally acknowledged the Soviet rule and joined the Soviet state (Avtorkhanov 2005).

The Bolshevik were the first Russian government which set themselves to build a modern statehood in the North Caucasus: to penetrate deep into the social structure, even in the domain of the family life, and to integrate various social segments into a cohesive political unit. In their early years, the Bolsheviks progressed impressively through modernization and development, subsequent tough measures—forced collectivization, dekulakization, anti-Islamic campaigns, and repression of Muslim clergy - undermined some those efforts, strengthened traditional mechanisms of self-government.

In 1920s-30s the Soviet government developed public healthcare, mechanized agriculture, and formal secular schooling system based on the national languages. Vajnakhs benefited from the program of korenization\(^\text{16}\) launched in 1923 which was aimed at the promotion of national languages, national elites and at the employment of representatives of non-Russian nationalities. The best analysis of the logic and essence of this policy is offered by Terry Martin’s seminal book “The Soviet Affirmative Action Empire”.

The scale of affirmative action towards minorities in the early years of the Soviet Union was unprecedented. Both Chechens and Ingush were on the list of the country’s 97 “culturally

\(^{16}\) Lit. Rootinization, indigenization.
backward nationalities”, and were offered a number of class-based and gender-based affirmative action programs, and as a result large numbers of Vajnakh citizens were eligible for some sort of preferential treatment.

The main obstacle for *korenization* efforts in Checheno-Ingushetia was the very low level of literacy of the population, which was a minimum prerequisite to promote locals for managerial and leadership positions. According to Martin, in 1926, the literacy rate among Ingush was 9.1%, while of Chechens – 2.9%, compared to 45% literacy among Russians and 78.1% among Estonians. During the first five-year plan tens of thousands of mountaineers were put through short-term courses to train them for positions like that of kolkhoz accountants (Martin 2001: 171).

According to Simon, in the sphere of education ‘the pace was unprecedented in comparison with other countries. Soviet accomplishments in this area dwarf the efforts of many southern European countries, let alone those of the Third World Countries (Simon 1991:266). The mechanization of labor required higher educational background. This encouraged Muslims to send their children to school. The use of mother tongues in the classrooms had a pronounced effect on the development of the schooling system. Since primary schools were simultaneously being made almost entirely native language, these teachers had to be non-Russian. In 1939 the level of leadership korenizatsiya in Checheno-Ingushetia was higher than in the Ukraine or Belorussia. Wide educational opportunities produced the first layer of Soviet intelligentsia, who having benefited from the regime started to develop loyalties and attachments to it.

Tables 3-5 show the social-professional structure in Checheno-Ingushetia.

According to a Russian historian Pavel Polian, the unrest following the collapse of the Russian Empire resulted in 5-6 times decrease in the oil production. By 1920 Bolsheviks managed to raise the production to pre-revolutionary level, and in 1922 18,000 workers were employed in oil industry, which was quite a large concentration of proletariat in agrarian Chechnya (Polian: 2003). In 1928 the North Caucasian region initiated a 5 year plan to recruit a thousand mountaineers per year into factories of Rostov and major North Caucasian cities (Martin 2001:152).

Korenization stipulated efforts at changing the legal consciousness of the people: local judges were educated and employed in the new Soviet courts; special educational programs were set up at the workplace in order to acquaint the locals with the new legal system and codes (Babich 2000:36). The project was not very successful and the Soviet courts enjoyed little legitimacy since in Vajnakh understanding, they stipulated strict penalties for minor offences, while not punishing murderers sufficiently enough. Consequently, the minor offences were hardly ever reported and blood feuds were executed regardless of the Soviet courts. Vajnakh societies continued to live in a plurality of legal systems: now adat, sharia and Soviet laws.

The political sovereignty of North Caucasian mountaineer within the Soviet State was short-lived: between 1921 and 1924 Moscow divided the Mountainous republic into smaller units: in October 1922 and in July 1924 respectively the Chechen and Ingush Autonomous Oblast’ (Regions) were formed, which in December 1936, were merged into a separate Chechen-Ingush
Autonomous Republic. Ingush lost their capital—right bank of Vladikavkaz, which was left to North Ossetia.

The real Soviet offensive started in 1929 with collectivization. The policy of dekulakization targeted not only wealthy peasants, but often middle class rural families and even hired laborers who expressed anti-kolkhoz opinions. In North Caucasus dekulakization was often used as a pretext to get even with personal enemies or rivals or target religious leaders. Local authorities had to regularly report on the results of dekulakization, therefore in order “to produce statistics” families were selected randomly and deported to Siberia.

Forced collectivization, expropriation of property, arrests and deportations, accompanied by closing of mosques produced mass protests in Ingushetia and Chechnya (Polian 2003).

Eventually kolkhoz policies adapted to the Chechen and Ingush reality. Authorities closed eyes on Chechens, who organized collective farms which were “not simply small, but dwarfy” - almost family based (Polian 2003). Thus, in one (big) village Shali 87 kolkhozes were registered, “which at best was a parody on collectivization” (Polian 2003). By the end of 1930s Chechen–Ingushetia had 412 collective farms. The Chechens and Ingush sabotaged kolkhoz formalities; the production output was very low. Many enterprises…practiced various upward distortions, fraud and falsification of documents. According to Polian, in 1939 about 10% of all grain areas were written off as destroyed by hail, pests and diseases. In fact, as the revision commission established, the grain was lost a result of neglect and weeds. The collective farmers paid little attention to the public cattle, while horses confiscated from private households in fact remained at their previous domicile address – in the stables of their previous owners (Polian: 2003).

In the 1930s dekulakization was supplemented with combat on “bourgeois nationalism” as a result of which the whole strata of local intellectuals was exiled or eliminated.

Anti-religious campaign was launched since 1925 and was particularly rough in Ingushetia. In another wave of repression in 1937 almost 300 religious leaders of Chechen-Ingushetia were arrested, which was almost everyone who could read Koran (Akaev 1994). Anti-Soviet uprisings
continued until 1941. According to Pavel Polian, 12 major uprisings took place in Chechnya in 1921-1941, each of which numbered 500-5,000 armed participants (Polian 2003).

To conclude, early Soviet policies involved assertive affirmative action programs, which resulted in impressive development of Chechen and Ingush social-professional structure, increased the level of literacy and education, changed employment patterns, promoted emancipation of women. Moreover, korenizatsiya created a demand for teachers, journalists, writers, historians, as well as for bureaucrats; Chechens and Ingush gravitated to those spheres and established their networks. Rural, family-based economy continued to reshape, there emerged new patterns of social integration – industrial teams, professional unions, communist party and komsomol membership, which co-existed with traditional identifications and acquired increasing significance.

Collectivization further destroyed the economic basis of Chechen and Ingush extended families. Even nuclear family household could no longer be the main source of income due to limits on private economic production. Family members had to sell their labor to kolkhoz or join industrial enterprises. This development diversified the family employment patterns and accelerated erosion of strong extended family units embedded in common economy. At the same time the strong extended family structures of Vajnakhs were not easy to discompose. Moreover, they managed to adapt the new kolkhoz regime to their habitual ways of economic activity.

The 1937-1941 mass repressions against religious leaders and national intellectuals were aimed to destroy all alternative (religious and nationalist) power centers in Ingushetia and Chechnya. The elimination of educated stratum undermined the achievements of korenization and impeded the subsequent cultural and professional development of Chechen and Ingush societies. Importantly, repression was not targeted at leaders of kinship structures, which proves that Bolsheviks did not see kinship structures as institutions of real power, but rather as units of bourgeois economic activity.
3.2. Vajnakh society and social institutions during the deportation (1944-1957)

In 1944 the Autonomous Soviet Socialist Republic of Checheno-Ingushetia was abolished, the entire population was charged with ‘cooperation with Nazi occupants’ and was deported to Central Asia mostly to Kazakhstan and to Kirgizia, but also Tajikistan and Uzbekistan. The ‘deportation’ took place in the midst of the winter; many people died on the way of diseases, cold and hunger. Many more perished upon arrival. According to Russian ethnologist Valeriy Tishkov, the Chechens lost over 1/3 of their population (Tishkov 2001:82).

My respondents recalled how the deportees were placed on American jeep cars, each truck collected people from one neighborhood or small village and brought them to train stations, where they were jammed into train cars “so that there would not be enough space to stretch one’s legs”. Recently revealed archive documents confirm that on the average 240 people were transported in each train car (Kozlov and Kozlova: 2004). Sometimes a train car would be formed of people from the same convoy, which meant - of the co-villages or residents of the same neighborhood. These deportees had greater chances to find themselves in the same areas of Kazakhstan or Kyrgyzia, and subsequently to re-unite.

Having analyzed over 50 interviews about exile, I came to the conclusion that deportation inflicted considerably greater suffering and loses on residents of mountainous villages, which were inaccessible to automobiles, and thus their residents had to walk on foot to the regional centers, from where they were picked up by cars (usually 15-25 kilometers). Those who had to walk were not allowed to take more luggage than they could carry in their hands, and since often families had many small children to carry, they could take only basics. As a result more mountaineers died of hunger on the way and upon arrival. The very ill and elderly mountain dwellers, who could not walk were shot dead. In a high mountainous village of Khaibakh (Galanchozhsky region of Chechnya) 705 people were burnt alive in the kolkhoz stables: these
were elderly, women and children from the surrounding villages who could not walk on their
own.

On the day of deportation all men were told to come to the village administration. And women
were ordered to pack. My daughter was 4 years old and she was laying in fever. When we were
ready to go my husband said, leave her at home, we will come back tonight. We went, and then I
turned back and saw tears running down her eyes. I rushed back and took her along, tied her to
my back with a woolen shawl. All day they kept us outside in the snow, the girl did not make a
single sound, she was so happy that we took her with us. That day they kept us in the village and
did not let us take almost anything. Next day they made us walk to Yalkharoy /regional center –
E.S. / on foot. Many ill elderly were left behind. Two brothers Sajdaev, Israil and Mikail, were
carrying their elderly mother on their backs. Then the soldiers shot her dead in front of them.
From Yakhororj we had to walk on foot to Alkan in Ingushetia, and from there they picked us up
by cars and brought to Grozny railway station. No food was given to us on the trains, only what
we could take with us. Several days later my daughter died. People were hiding dead children,
because if the soldiers noticed corpses, they threw them out of the window. My brother Yakub
performed the rite, pronounced a prayer, we wrapped her in cloth. At a train stop in Kyzlyar he
asked a local shepherd for a spade and buried my daughter...

Khabisat Khasbulatova, 1910, village of K’orgi, Galanchozh district of Chechnya

In Kazakhstan, the trains stopped at each station, 3-4 families were called out, and the train
continued. At the stations deportees were met by the locals in carts yoked in oxen or cows and
taken to small villages. Members of the same teip, gaar and nek found themselves dispersed
around a vast territory of Central Asia. Moreover, lots of nuclear families became separated,
since people were deported from where they were on the night on the deportation and many were
cought on that night at relatives’ or parents’ homes (staying overnight at relatives is still a
habitual practice). I documented numerous stories of people who spent weeks and months
wandering from village to village of Kazakhstan trying to find their nuclear kin despite of strict
penalties stipulated for unsanctioned leaving of the allocated place of exile. Some movement was
possible until 1946, after that it was fully restricted. The regime of “special settlement” was
enforced by a system of komendaturas (commandment’s officers) manned by NKVD staff.
Every ten days each exiled Chechen and Ingush older than 10 years old had to register at his
komendatura. Leaving the allocated place of exile could result in long prison terms.

Our teip was scattered 1-2 families all around Kazakhstan. In the village where my family lived,
there was no single Ingush, to say nothing about Aushevs. It took us long to find out where our
relatives lived. People were writing letters, asking each other, in 3-5 years many relatives found
their kin through correspondence, but could not visit them until Stalin’s death. This was done on
purpose, to prevent communication. Mussa Aushev, Director of House of Folk Art, Ingushetia

At the same time Chechen and Ingush settlement during deportation was more compact than of
other deported peoples, the overwhelming majority were located in Northern Kazakhstan (over
400,000) and in Kyrgyz republic, thus according to a Russian scholar Kuznetsova “ separation of
families …in deportation of Chechens and Ingush did not have such catastrophic consequences compared to other peoples, it did not have an impact on their linguistic situation and ethnic self-consciousness “ (Kuznetsova 2005).

The first two-three years of deportation were a genocidal experience. Those who managed to take money, corn or dried meat from home, survived longer, others were dying of hunger and diseases. According to the official statistics of the Department of Special Settlements of NKVD of USSR, during 1 year and 8 months after the deportation the number of Chechens and Ingush reduced by 90, 560 people. Between 1944-1948 144,704 Chechens and Ingush died. Thus, the highest percent of mortality was during the first 1,5 years of the deportation- around 15% (in Kuznetsova 2005).

In three - four years life became easier, people started to plant vegetable gardens, some got jobs and managed to support their families, affluent kolkhozes distributed cows to deportees, entrepreneurial and hard-working Vajnaks tried to find a place in the existing labor market, used every opportunity to make money or otherwise find resources for their households. High responsibility to their relatives and shrewd survival strategies had brought results; those who survived the first 3-4 years, usually lived:

We were settled in a German village near the town of Kustanaj in Kazakhstan. In spring I collected potato peels and we planted these peels. The peels gave such a crop, much better than that of the Germans who planted full potatoes! The chair of the local kolkhoz held us as an example: “You see”, he said “they cultivated land by hand, planted peels and got such a crop!” Subsequent years there was famine in Chelyabinsk and people came from there and bought potatoes from us. For this money we bought a cow, two sheep and clothes. Adam, Goragorsk, Chechen Republic.

After Stalin’s death, restrictions on movement were fully abolished and many extended families consolidated or moved to urban centers.

Our family was scattered around the entire steppe. /after 1953/ we tried to move closer to each other, someone would find a job and others would then join him, move closer. Osman Khadziev, deported from Khadziev Khutor, Prigorodny Region of North Ossetia, currently resident of Malgobek, Ingushetia

Many of my respondents said that they moved to their matrilineal relatives, or in-laws. Previously Vajnakhs rarely resided with their matrilineal kin, but in deportation conditionality
was dropped and kinship, rather than descent was the basis of solidarity. Alikhan Dozariev, the
director of Ingush museum- memorial to deportation, thinks that this reshuffling increased
national solidarity and erased teip and family frontiers:

In deportation many people lost their families, they had to survive with other families. And when
a person lives with another family, he becomes their part. Grief united people; they had to share
what they had with those who were surviving next to them, without dividing them into kin and
non-kin. Everyone was a brother. Ingush national consciousness had very much strengthened in
that period. Alikhan Dozariev. Ingush Memorial-museum to deportation, director.

After 1955 Vajnakhs were distributed passports and young people could get into universities.
Hard working and entrepreneurial, by the end of years in exile many Vajnakhs became well-off.

By the end of the deportation we lived marvelously. Older brother worked in an automobile
shop, another brother was a driver, and third brother was also a driver. I studied at school. In
1957 we moved to Alma-Aty, I continued my studies. We lived better than now. Life had taught
us to find ways, we are a very entrepreneurial and hardworking people. Many families became
affluent. Bersnak Gandarov, lawyer from Karabulak, Ingushetia

On July 16, 1956 after the Supreme Soviet of the USSR adopted the Decree of “On abolishing
limitations for special settlement of Chechens, Ingush, Karachay and their family members”,
Vajnakhs started mass resettlement to the North Caucasus and by 1961 the overwhelming
majority of them had returned.

During the years of exile Chechen and Ingush managed to maintain their culture, language,
informal social structure and a spirit of opposition and silent resistance to the regime. In the
emergency conditions, national and family solidarity increased, traditional institutions of self-
government strengthened, customary law; etiquette, traditions and rituals were preserved. These
institutions shaped a social space parallel to the official, which the authoritarian state was unable
to penetrate. The institution of Seniors, which in pre-deportation times had already been almost
symbolic and limited to the domain of ritual, during the years of exile, especially during first
genocidal years of 1944-1946 regained its real spiritual force and pursued a conscious mission of
preserving traditions and national identity. It was in exile that Vajnakh Seniors enforced strict
endogamy which is still largely observed until now. At the same time in Kazakhstan young
people assimilated faster and not always followed the traditional ways:
During the first years we did not do sakh\(^{17}\). If a person died, and others had enough energy to bury him, this was already considered good. Then when life became better we started to perform all our rituals according to rules. There were around 200 Chechens in the place where we lived, so we observed everything…. But young people were under strong influence of the environment. Some started smoking and drinking. Said-Ali, deported from Khal-Kiloj, born in 1911.

Not surprisingly during the first years of deportation, special services reported an unprecedented increase of Vajnakh religiosity. In the end of 1946 the Ministry of Internal Affairs “revealed” among the special settlers from the Caucasus – 1003 mullahs and other religious authorities. This was twice as many as members of the Communist party, of which there were 593 people (Kozlov and Kozlova 2004). According to historian Kozlov “the religious life was bustling and the authorities could not understand what was happening within the community” (Kozlov and Kozlova 2004).

In 1950s in the Akmolinsk region of Kazakhstan, a group of zikrists, headed by Vis-Khadzi Zangiev founded a new vird- so called beloshapochniki (white hats). Vis-Khadzi reformed some of the Vajnakh customs and rituals, thus he established a fixed and low price of bride money, which was burdensome to some of the families in exile.

Kuznetsova concludes that the thirteen years of deportation furthered “the ethnocultural strategy of Chechens and Ingush - the inclination to self-isolation and resistance to any minor pressure of the authorities… National self-consciousness of the Chechens and Ingush was traumatized by the stigma of the “nation of traitors ” and although none of the Chechens or Ingush believed in fairness of such accusations, “the public opinion” in Kazakhstan and subsequently upon return to ChIASSR, was conducive to depressive moods and insularity” (Kuznetsova:2005:).

I would argue that deportation taught Chechens not to resist every minor pressure of the state, to adapt or find ways around, counter-act totalitarian pressure by strengthening and enlarging their distinct social space and alternative ideology. This space was carefully safeguarded by the seniors, by the religious leaders, simply, by adults.

\(^{17}\) religious sacrifice, usually meat and other food.
Undoubtedly, deportation greatly impeded the economic and cultural development of the Chechens and Ingush. While other Soviet nations were writing their histories, developing literatures, industry and science, Vajnakhs fought for survival, struggled to make their way to a local factory, to establish themselves there, to bring relatives, so that all could stay close and warm. At the same time, in the end of the day, scholars’ evaluate differently the social progress of Vajnakhs societies during the thirteen years in exile. Some conclude that the social-professional structure of Chechens and Ingush was frozen, restricted to agriculture and unskilled manual labor and partly degraded, due to lack of conditions for professional growth of national intelligentsia (Kuznetsova 2005). Others, like historian Kozlov, on the contrary, emphasized the opening up of Chechen and Ingush societies, as a result of education in multiethnic environment and integration of mainly young people into a different cultural milieu. „It was there that the process of influence of the Russian or better say Soviet culture on deported peoples began. Young people started to go to movies. Young men started to date Russian girls… youth started to learn many things which went beyond the framework of the customs and traditions of their people, a window to the big world was open to them“ (Kozlov and Kozlova 2004).

The deportation fully undermined the territorial basis of Chechen kinship: the teip villages, kin-based neighborhoods, traditional mechanisms of maintaining contact by attending funerals and weddings. It had finalized the processes launched during collectivization - destroyed the traditional Vajnakh economy of self-employment, the family–based agricultural and cattle-breeding households, and made most Vajnakhs employed by the state. Nonetheless, by the end of the deportation Vajnakhs managed to consolidate their families (usually extended families up to second cousins) revive religious brotherhoods, and establish regular Islamic practice. Moreover, leaders of virds continued to play a prominent role. The process of creation of new virds continued, which is exemplified by the emergence of new vird of Vis-Khadzi Zangiev, part of Qadyriya tariqa.
3.3. Vajnakh society and social institutions upon return (1957-1991)

On 16 July 1956, the Presidium of Supreme Soviet of USSR issued a decree “On abolishing limitations for special settlements of Chechens, Ingush, Karachay and members of their families”\textsuperscript{18}. On January 9, 1957 the Decree $№$ 721/4 of the Supreme Soviet of RSFSR restored Chechen-Ingush Republic with the aim to “create necessary conditions for national development of Chechen and Ingush peoples.”\textsuperscript{19} Prigorodny Region, which used to be part of Ingushetia, remained in North Ossetia, as a way of compensation, Naursky, Nadterechny and Shelkovskoy districts were annexed to Chechen-Ingushetia, which previously belonged to Stavropol kraj.

For organization of repatriation an Orgkomitet (\textit{Organization Committee}) was created, which was supposed to return Vajnakhs in an organized manner. However, thousands of Chechens and Ingush headed back to the Caucasus in an uncontrolled fashion. In a month after the decree 11,000 people had already resettled to former Chechen-Ingushetia (Kuznetsova 2005). In the subsequent three years the spontaneous return of Chechens and Ingush swept all plans and established timeframes. By early 1958 201 746 people arrived instead of the planned 100,000. (Kuznetsova: 2005). They had to be accommodated in a republic which already had 540,000 inhabitants resettled there during the deportation of Vajnakhs. In 1957, the police tried to stop this flood of repatriation and detain those who returned without permission of Orgkomitet, but without success (Kozlov and Kozlova 2004).

Upon return home, Vajnakh found their houses occupied by other settlers. There was a scarcity of jobs, the capacity of social infrastructure was limited. Return to high mountainous villages of Itum-Kalinsky, Sharoysky, Galanchozhsky, Chamberloysky and Shatoysky regions of Chechnya was forbidden and strictly persecuted. All the returnees had to squeeze themselves into the existing social texture of lowland rural areas. The percent of indigenous urban residents remained low until 1980s.

Measures for repatriation of Chechens and Ingush stipulated providing Vajnaks with loans for building houses and buying cattle, however, according to scholar Kuznetsova, only 5% of returnees actually benefited from these loans. In 1957 only 1/5 of returnees had housing, the rest lived in industrial premises, dugouts (Kuznetsova 2005). Some tried to reclaim their former houses by force; or to exert psychological pressure on new settlers to leave.

The problems of employment were structural. Labor market in Chechen-Ingushetia was incapable of taking in so many new arrivals; most positions had already been filled by the non-Vajnakhs population. Moreover, the economy of the region had become more advanced while the Vajnakhs were in exile. Oil, chemical and mechanical engineering industries required new skills which Vajnakhs did not possess and had few opportunities to acquire. According to Valeriy Tishkov, the republican economy was ethnically divided, the ‘Russian sector’ controlled the oil industry, heavy machinery, infrastructure and services, while the ‘national [Chechen and Ingush] sector’ was concentrated in agriculture and trade. ‘National cadres’ did not have equal access to

---

the more prestigious and better paid jobs in the industry (Tishkov 2001: 116). Even in the late 1980s the largest industrial enterprises of Chechnya, such as Grozneft and Orgsintez, which employed more then 50,000 people each, offered only a few hundred positions to Chechens and Ingush (Tishkov 2001: 116). In Kuznetsova’s opinion, the concentration of Chechens and Ingush in light and food industries and in agriculture was a result of a conscious policy (Kuznetsova: 2005). Unemployment forced over 30,000 Vajnakhs workers to annually leave the republic for seasonal jobs in Russia\textsuperscript{21}.

Still starting mid-1970s Vajnakhs slowly but steadily integrated into all sectors of the modern economy of the republic, which was among most industrialized in RSFSR\textsuperscript{22}. Vajnakhs benefited from modern social infrastructure of schools, hospitals and institutions of culture. In 1977 the Republic had two higher educational establishments – Grozny Oil Institute, which was of country-wide significance, and the Chechen-Ingush Pedagogical Institute, 12 specialized middle educational establishments, 566 schools (Grebenschikov 1977). In 1967, 14 scientific research institutes functioned in Grozny, 8 newspapers published in the Chechen and 2 newspapers in the Ingush languages (Grebenshikov 1967:152,155)\textsuperscript{23}. Increasingly greater numbers of students received college and university education.

In 1967 for each 10,000 people there were:
In USSR - 166 students
In the Russian Soviet Socialist Republic - 185 students
In Chechen-Ingush Republic – 125 students

The numbers were lower than average in the country, but according to the same source; the numbers for Romania in 1967 were 100 students for 10,000 and 18 students in Pakistan.\textsuperscript{24}

However, the official statistics on Chechen-Ingushetia does not reflect the educational progress of Vajnakhs.

\textsuperscript{22} In 1971 81.4% of the republican gross economic output was industrial, 52% was oil industry, the rest was distributed between energy sector, mechanical engineering, chemical and other industries.

\textsuperscript{23} Grebenshikov P. 1967. Chechen-Ingush ASSR in 50 years. Chechen-Ingush publishing house. Grozny. Table: Number of females among students of vocational and higher educational establishments.

\textsuperscript{24} Ibid.
Usually the official collections of statistical data on Chechen –Ingushetia in 1970-1980s did not publish data on national aspects of education and economy. However, in “Checheno-Ingushskaya ASSR in 50 years” of 1967 we find the following tables, which suggest that despite being the most numerous ethnic groups in the republic\textsuperscript{25}, Vajnakhs were heavily underrepresented in educational institutions compared to Russians:

This situation was a result of lower educational level of Vajnakh secondary school graduates, constrained economic situation of Vajnakh families, who could not afford to send a young person to higher school and had to have him employed, and general lower value that Vajnakhs attributed to higher education. Many male adolescents and even teenagers joined their older relatives in seasonal works, mainly as construction workers in Russia, Ukraine and Kazakhstan.

\textsuperscript{25} According to 1970 census, Chechens made up 47.8\% of the republican population (508,900), Ingush 10.7\% (113,700), Russians – 34.5 (366,900) in Grebenshikov P (ed) 1977 Checheno-Ingushskaya ASSR in 60 years of Soviet Power. A statistical volume. Checheno-Ingush publishing house, Grozny 1977
\textsuperscript{26} Grebenshikov P. 1967. Chechen-Ingush ASSR in 50 years. Chechen-Ingush publishing house. Grozny. p.146
\textsuperscript{27} Ibid. p.147
I remember as we got older, on the 1st of September, the beginning of school year, many Vajnakh guys in our class would be missing. They got into school only by the end of October or so. Their parents took them for seasonal jobs, which were over in late autumn. Shamil, 1968, Grozny

The impact of “otkhodnichestvo” (lit. leaving for seasonal works) on Vajnakh societies needs to be a special topic of research. I will name a few factors: first, a male dominated society where 30,000 men every year left their families and spent several months in different social and ethnic environment continued being increasingly less male-dominated. Women took charge of households instead of their husbands. Second, otkhodnichestvo was conducive to Vajnakh integration and feeling part of a big country. Some of these men had civic marriages in Russia with children. Many lived “a Russian” lifestyle when being away from their communities. However, their integration was very limited, constrained to the sphere of private construction-building and did not involve full-fledged participation in the life of the receiving communities, which could have happened the case of regular employment. Third, opportunity to make significantly better money during seasonal employment prevented Vajnakhs from sending young men to higher school and vocational training, i.e. impeded professional sophistication of many Chechens and Ingush.

Containment of Vajnakh citizens to rural areas and traditional sectors of economy which impeded the development of social-professional structures of the Chechen and Ingush societies was conducive to the tenacity of Vajnakh informal social structures.

Islamic brothergoods -virds and their leaders continued to play a prominent role in the society, according to Kuznetsova, there were around 500 mullahs in Chechen Ingushetia in 1970-s. Customary law- the adat and Islamic law- the sharia penetrated the Soviet law- enforcement and the judicial systems. Cases of blood feud were sometimes closed with consent of both sides. Marriages were registered according to sharia norms. After divorce children typically stayed with the father, contrary to the Soviet Family Code and in compliance with sharia. However, the multiplicity of legal institutions gave individuals a chance of manoeuvre. Thus, a divorced
woman if she was determined to have the children with her had the Soviet court on her side, and she actually got the opportunity to fight for her rights, if she was prepared to confront her own social reality. The same related to the abduction of brides: families who felt offended and wanted to punish the perpetrators had the option to turn to the Soviet court, which threatened the unlucky “bridegroom” with 10 years in jail. Both of these developments were conducive to further emancipation of women.

Most of my respondents from Grozny claimed that in 1980s teip and vird identification was not important at all. Many of them knew almost nothing about their teips and did not know teip affiliations of other Vajnakhs around them. In the multinational environment it was important that they were “Vajnakhs”, then “Chechens” and “Ingush”, further divisions were not relevant.

Return from exile was another shake up for the remains of the deteriorated teip. Structurally teips and lineages were yet another time territorially fragmented. Mountainous villages- teip heirlooms - were closed for residence, houses and cemeteries were destroyed, regular rituals linked to teip cemeteries and teip villages were impossible. Moreover, even the nucleus of the teip structure, - the inhabitants of teip village - were now scattered all around Chechen-Ingushetia. Impossibility to practice rituals in the teip village of origin and thus maintain regular contacts dramatically reduced the organizational capacity and unity of the teip. At the level of identity- return from exile caught Vajnakhs in the intense ethnic strife with representatives of other nationalities in the republic. Disputes over property, competition for land and scarce employment often acquired ethnic overtones. This resulted in strengthening of the Chechen and Ingush national identities against other ethnic groups, enhanced internal group cohesion, thus reducing the significance of internal sub-national divisions. Teip identity, however, continued to matter to some degree in match-making for marriages.

In residential area of Grozny extended families lived in a dispersed fashion, especially in neighborhoods of blocks of flats. In rural Vajnakh populated areas, consolidated kin-based neighborhoods were more frequent. Despite collectivization of agriculture, in the conditions of
high unemployment family households (cattle, gardens, and vegetable gardens) remained an important basis of family economy. Family households were usually nuclear families, but sometimes included adult brothers or cousins living next to each other. Despite dramatic dispersal of Vajnakh family structures during exile and upon return, high birth rates, predominantly rural lifestyle and the tradition to attend family ceremonies (funerals and weddings) in large numbers which was revived after return from exile, helped maintain strong and wide kinship ties. At the same time, the Soviet modernization, industrialization and social change produced new patterns of social integration. Educational opportunities, upward mobility for workers and peasants, urbanization strengthened further new integrative patterns (e.g. students groups, party membership, Komsomol, workers collectives, professional unions etc) and new modern allegiances with the modern state (e.g. Soviet citizen). The intelligentsia, national nomenklatura and workers were new strata created by the Soviet State which operated in a more individualistic fashion. However, in the government positions titular nationalities were underrepresented. According to Kozlov, in 1979 and 1989 for each 1000 adult Chechens only 2 persons were in the governing positions (Kozlov 1999: 134,141). For this reason Chechen networks did not establish themselves strongly at the republican government and administration.

3.4. Collective Memory as a Political Resource

“All beginnings contain an element of recollection. This is particularly so when a social group makes a concerted effort to begin with a wholly new start”. Paul Connerton “How societies remember”

The next chapters will analyze Chechens and Ingush statehood projects launched in early 1990s. New political identities, new social movements as well as unprecedented political mobilization of the late 1980s were focused on and strongly embedded in the collective social memories. Before coming to the analysis of post-Soviet developments, I will briefly discuss relevant issues related to collective memories, which the national leaders will be heavily drawing on in 1990s.
When asked about motivation to support the separatist cause in Chechnya or the national movement in Ingushetia, almost all respondents provided historical justifications:

*For me all started from school. I knew since my childhood what had been done to our people. I have searched through all school textbooks and there was no mention of Chechens. There were wild tribes, indigenous peoples, but no Chechens. We had a history teacher, Nadezhda Nikolaevna, I asked her in class why there were stories of different peoples... but nothing about us, a whole national republic? I caught her angry glance and got no response. Her husband was a local policeman, a few days later he came up to my father and said “Your son is asking too many questions. He does not need it.” But I needed it. I knew my grandfather was deported and died as a kulak, because they had two flour mills here in the village. His three brothers were shot dead. My father was nine when he was deported to Kazakhstan with his grandmother. She died of hunger a month later. My father was raised in orphanages. I had always known that I would fight when the time comes. I was a ready-made revolutionary.*

Ruslan, former Chechen fighter

Ruslan joined combatants when he was seventeen, fought in both wars and is now racketeering in one of the Southern Russian towns. Issa Kodzoev, an Ingush intellectual, writer and the leader of Ingush national movement “Nijskho” explained how struggle for Ingush national statehood started for him in similar terms:

*It started when we were students of Pedagogical Institute. It’s all because we were deported and we wanted to know the truth. In 1944 my family numbered eleven people. I buried everyone in the deportation, and returned home alone.. After my arrest in 1962 in court I said that I would fight the Soviet power till the end of my life...*

The phenomenon of social or collective memories has been a topic of prolific theoretical and empirical research since Maurice Halbwachs’s famous introduction of the topic into the social science theory in 1940s (Halbwachs (1926) 1950). Following Durkheim’s belief that the function of remembering is to promote a commitment to the group by emphasizing its values and aspirations, Halbwach brought the thesis further by claiming that every group develops a memory of its own past that highlights its unique identity, and that collective memory is in fact a manifestation of this identity. According to him, memory is a crucial condition of social order,
solidarity and political action; moreover, it is reorganized and restructured, when the society remembers together (Halbwach: (1926) 1950).

Scholars of “the presentist” memory approach showed that nationalist movements create a master narrative that highlights the society’s common past and legitimizes their aspiration for a shared destiny (Luke 1996, Collini 1999 in Misztal 2003:56, 61). Nations who have lived through genocidal experiences, had been deprived of parts of their history develop popular counter-memories that are particularly stable with regards of their certain core elements. Political leaders usually build up on these memories, on “what goes without saying”, i.e. something that is so well known in a given community that it is taken for granted (Connerton 1994:18).

During my five years among Ingush and Chechens I have heard hundreds of family histories and participated in tens of occasions when people collectively remembered their past. This happened at the workplace, in the evenings during tea with neighbors, in the villages where we stayed overnight. Once a group of people got together informally, story telling about the past would often be a way of spending the time. If a senior happened to be in the house, and he or she would happen to be of a story-telling type, everyone would get around them, occupy cosy positions, someone would ask a question “Vashi (Uncle)\textsuperscript{28}, how did we live in the past?” and the story would float.

I distinguish three types of social memories, which Chechens and Ingush share about the experience of Russian/ Soviet statehood before 1990 - ‘memories of grievance’, ‘memories of success’, and ‘memories of multiculturalism and inter-ethnic solidarity’. Depending on circumstances and personal perspectives one cluster of memories or another is being actualised, shaping the political outlook.

‘Memories of grievance’ are very prominent in both Chechen and Ingush self-identification and deportation remains the central building block of this type of memories. Collective memories preserve detailed stories of the day of deportation, way to exile, first years of fight for survival,

\textsuperscript{28} A respectful address to older man
and lost dear ones. The label of ‘enemy of the people’ was very painfully perceived, especially by those, whose relatives fought on the fronts during the Second World War, of which there were thousands. Such was the senior Islaj, born in 1922, a resident of the town of Sernovodsk in Chechnya, who went through the whole Second World War, from Kiev to Stalingrad, and was injured during the notorious Stalingrad battle:

*Stalingrad battle was the worst thing I’ve seen. Not only people, each dog in Stalingrad should have been awarded the Hero of the Soviet Union. I defended my Motherland, spilt my blood and my family was deported as the enemy of the people. My father, four brothers and two sisters died in deportation. Only my mother and I have returned.*

State-sponsored oblivion intensified trauma. There was no mention of deportation in the official press or history books. The acts of heroism by Chechens and Ingush during the war were silenced and when a Chechen writer Khalid Oshaev, discovered many Vajnakhs names among the perished during the heroic defence of the Brest fortress and tried to publish a book about it, the publication was banned and the script was stolen from the editor’s writing desk (Shnirelman 2007: 276).

*I worked in LITO – the republican department of literary censorship. We were censoring periodicals and books in Russian and in the national languages. Until 1980s in the official press you could not use the words “deportation” or “exile”. The instruction said “forbidden until special permission”* Ilina Sajdullaeva, literary editor, Grozny

Apart from deportation and the Caucasian war, Chechen and Ingush have a strong block of recollections about collectivisation and the repression of mullahs, discrimination upon return from exile, disrespect of the native language and culture.

*At the entrance to the university there were huge letters: “Rich and powerful Russian language”.. I was close to my students and they told me about incidents of chauvinism on behalf of the Russians-speakers.. I remember at the history department there was an open lecture by Professor Katsin on “One language of Communism”. His main point was that under communism there would be only one language- Russian. Students asked him: and what about our national poets and intellectuals? “These are rotten intellectuals” – he responded.* Khussejn Betelgereev, Chechen poet, bard-singer, philologist

Symbols of colonial domination increasingly irritated the youth who in the 1980s repeatedly attempted to blow up the monument to notorious general of the Caucasian War Alexey Yermolov or poured it with red paint (Shnirelman 2007: 278).
Obviously memories of grievances affected people differently. In some families, grievances were much discussed and even cultivated, there were strong negative sentiments towards the state and Russians as its representatives; others tried not to focus much on negative information:

*In my family parents tried not to load the children with this information, as it could have been an obstacle to our normal life in the society. They followed the principle "you'll find out yourself as you grow".* Timur, Ingush from Grozny, born in 1972.

Other families would share their family stories with kids:

*As a child I spent most of my time with my grandfather, he told me a lot about the deportation, about two cousins who died there of disease. Since childhood I was ready to fight for independence, I knew it did not start yesterday or today.* Salambek, Chechen fighter, Grozny

The ‘memories of success’ mostly referred to the periods of regime liberalization: in the late 19th century, after the Bolshevik revolution before Lenin’s death, and in the last decades of communism. After the annexation to Russia, Chechens and Ingush participated in almost all of Russia’s wars. The fact that they were awarded the highest decorations and were praised by the Russian Emperors remains part of ethnic memory.

*We have a common fate with Russia, we very actively participated in all wars on the Russian side, in Russian-Turkish war, in Russian-Japanese war of 1904-1905, in the First and the Second World wars, in the Civil war on the side of Bolsheviks, we were the basis of Soviet power in the Caucasus. We are accused of not fighting during the Second World war, but only at Brest Fortress battle 400 Chechens were killed. Over a thousand people were nominated for Heroes of Russia and only 380 subsequently received these decorations. Khussain Akhmadov, Chair of Chechen Parliament 1991-1993.*

Many remembered educational opportunities with great affection, especially opportunities for young women:

*After return from Kazakhstan my parents received a slot of land in a village and we settled there. For me this was the place of happy childhood, where children of different nationalities-Russians, Chechens, Ukrainians studied together. I loved literature and the Russian language wielded very deeply in me. Our village library was great, I used to sit there till late, so that my mother would get worried and come pick me up. Teachers were mostly Russians and very good, they encouraged our interest in learning. I was quickly growing intellectually.* Likhman Bazaeva, born in 1945, leader of Women’s Peace Movement 1994-1996, head of Woman’s Center “Women’s Dignity”, Grozny, Chechnya
Workers remembered upward mobility and possibility of free movement during last three decades of the USSR:

*I am not a great patriot of Russia, but it is my country. I am a miner; I have worked all over the country—in Karaganda, Norilsk, and Vorkuta. I have become a cosmopolitan person. I have read a lot and loved theatre and music. I am a great fan of the Russian literature...I do not want to live under Turkey or any other country; I am brought up on this culture...* Azamat Nalgiev, Member of Ingush People’s Assembly, the 1st call Assembly

Memories of multiculturalism and solidarity. Contrary to a widespread perception, there is no innate hatred of Chechens to Russians, which would be widely diffused among the population. The overwhelming majority of Chechens and Ingush I met spoke of the Russian people favourably, and remembered the multicultural communist times with nostalgia.

Strong positive memories about inter-ethnic solidarity are focused on deportation times, and then on late 1980s. Many of the interviewers recalled that during the first years in exile Russians were helping Vajnakh families to survive:

*Russians planted vegetable gardens and they always had tinned vegetables, pickles or potatoes preserved for the winter. They gave us those and old clothes for kids. Russians in authority were always softer than locals and eager to help.* Marika, born in 1936, resident of Alkhan-Kala, Chechnya

Another prominent cluster of memories relates to multicultural neighbourhoods in 1970-1980s, and non-Vajnakh teachers, who invested a lot of effort in educating non-Russian kids:

*We were lucky with teachers. Our school was next to the KGB building. So our teachers were Russians—wives of KGB officers. It’s amazing they were usually coming for one year but they invested so much effort, trying to teach us!* Akhmet, Nazran, Ingushetia

Chechen combatant Ruslan, whom I quoted in the very beginning, told me the following about his favourite school teacher, who was a Russian:

*My favorite teacher was Marta Timofeevna, she taught Russian language and literature. She had a heart of gold. She was shot dead in April 1995. I will never forget her...* Ruslan, a former Chechen combatant

Especially warm memories of multicultural life had the residents of Grozny:

*Life was much more interesting back then. In this street lived five Chechen families, four houses of Ingush. Across the street was a very nice Armenian couple. Here, next to us lived a Russian*
man with his wife. We all celebrated each other’s holidays. Ramadan, your Orthodox Easter. Everyone tried to cook the best of their cuisine and invite the neighbours. Everyone really tried to show the best of their culture. I remember I always liked Orthodox Easter. We also painted eggs. It was fun. Zina, 1965, Grozny.

Grozny had its own culture, and youth was of a special kind. My friend Timi Islamov was a fan of “The Beatles” and if he saw a Beatles fan – he would not care about his nationality. We were playing hide-and-seek around the Drama Theatre. We courted girls. Fighting for a girl was a normal thing. No one cared which nationality you were, you had to be a cool guy. Tamirlan Akiev, 1972, Grozny.

Thus, by 1980s Chechen and Ingush social memory was deeply projected into the history of past grievances. At the same time the Soviet State brought positive experiences of modernisation, social change, interethic solidarity and multiculturalism, which were preserved in the public consciousness as very dear memories. On the one hand, in early 1990s Russian federal elite had to deal with frustrated and traumatized nations, but on the other ‘memories of multicultural existence’ and the ‘memories of success’ left enough room for responsible policy-makers to strengthen Vajnakhir common identity with the new Russia, to find compromise and avoid wars.

Conclusion

This chapter analyzed the effects of the Soviet state-building, modernization, repression and forced and voluntary relocations on the social integration and informal institutions of Chechens and Ingush. I started by analyzing the achievements of early Soviet modernization programs, which accelerated the integration of Vajnakhir into the Soviet state, but were subsequently undermined by collectivization and repressions of late 1920s and 1930s. Collectivization destroyed the economic power of extended families, and forced deportation of 1944 further undermined the territorial basis of teip, weakened kinship ties, but strengthened national solidarity, adat and the institution of Elders. Return from the deportation resulted in a new wave of forced relocations, linked to restriction of settlement in certain areas of Chechnya and in Prigorodny Region.

By 1990 the Chechen and Ingush societies had a large sector of population both socially and economically organised in a rural community-based manner, the societies also had a
considerable strata of people living in urban areas and operating in a modern, secularised Soviet lifestyle. Teip deteriorated both as a social organization and as an identity. Extended and large nuclear families mattered most. Islamic brotherhoods-virds – also played an important role in the social life of the society. Religious leaders were strong informal centres of political power.

Generally, the 30 years after the deportation were probably the most peaceful period of Vajnakh history, which despite many problems allowed both nations to significantly develop its economic and cultural potential. Despite serious missteps the state, indeed, tried to integrate Vajnakhs into industry and agriculture within the areas of containment. Regardless of obstacles by late 1980s Vajnakhs managed to integrate with various degrees of significance to all spheres of economy, education and culture, their relations with other ethnic groups became more balanced. Patterns of employment changed dramatically- during the Soviet times the majority of working people were employed by the state. New professional and interest groups, together with thousands of pensioners, “multichild” parents, state-employed workers got used to the state providing salaries, living spaces, welfare benefits, free medical care, education, children’s holidays, infrastructure of culture, leisure and sport. Having benefited from the state they developed attachments to it.

The Russian state was most embedded in North Caucasian realities during the last two decades of the USSR. More balanced relations between ethnic groups naturally increased the prominence of Russian language and culture. Education, employment, mobility, urbanisation and some intermarriage helped to open up closed communities and implement Russian institutions and law which were relied upon more frequently, especially in the case of disputes between representatives of different nationalities, though these still co-existed with customary practices.

As history shows, social and economic integration of complex and unevenly modernized Vajnakh societies was the highest during periods of regime liberalization in the Russian state, when combined with relative state effectiveness. However, each time the pendulum of the
Russian history reeled from short, bright periods of thaw to prolonged periods of authoritarianism, Vajnakh conflict with the Russian state intensified and wounds opened up.

4. Social Integration in Ingushetia and Chechnya

(A fieldwork report)

This chapter aims to analyze the main patterns of social integration in contemporary Ingushetia and Chechnya. It is based on over a hundred interviews and five years long participant observation in the region (2003-2008), as well as additional field trips in 2008-2009. This chapter analyzes what clans are at the current stage of social development. It undermines existing theories that misunderstand local dynamics and miss the links between macro and micro levels of social and political integration.

The chapter demonstrates that clans are not the only social structures which shape social integration in Vajnakh societies, and they are not even among the most important ones. By undertaking a detailed anthropological analysis of the current state of the *teip*, i.e. historical patrilineal descent group, I conclude that the mechanisms for maintaining cohesion of Vajnakh clan (except for small teips in Ingushetia) are lost. Teip is a loose identity, to which different people attach different significance. The role of teip lineages and segments is limited to rare cases of blood feud, when teipsmen “express solidarity” and financially support the offended family, and to participation in each others weddings and funerals. Daily routines of the Chechen and Ingush individuals are to a greater extent shaped by close kin (patrilineal, matrilineal and affiliated through marriages) and religious structures – *murid* goups, virds or fundamentalist networks. During the last years religious structures have become increasingly prominent in the life of Vajnakh communities. Imams and religious authorities have replaced village Councils of Elders in all villages where I did my fieldwork. Regional and town/village identities are also prominent. Neighbors and co-villages are often considered almost as important as relatives, although, strict borderline is drawn between biological kinship and other types of ascriptive ties.
This chapter contributes to literature on clans by providing a detailed analysis of Ingush and Chechen teips, but also by refuting widespread stereotypes about Vajnakh societies as clan- and kin-dominated communities.

4.1. Fieldwork methodology and challenges

After several weeks in the field I noticed that people around me often used the word teip, but seemed to attribute different meanings to it: in daily conversations they could use the world “teip” (historical clan), when they actually referred to ‘gaar’ (lineage of that clan), to nek’ (segment of lineage) or even ‘tsijnakh’ (immediate close kinsmen). Ingush historian Nurdin Kodzoev confirmed this observation: “Nowadays many people call their familia /lineage- E.S./ their teip and only sometimes they remember that they actually belong to a larger teip”. Many interviewers when speaking of teip in their daily affairs actually meant some smaller group of relatives. They did not know exactly how to call it and used different terms:

We do have teips...But inside teips there is something like clan. Clan is smaller than teip; each teip will have different clans. This clan is very closely integrated. These are up to third cousins, may be further. Muhammad Gazdiev, Ingush historian, member of national movement

My teip- Mutsolgovs is too big, it is impossible to know all heads of the families. They originate from different settlements- Nasyr-Kort, Surkhakhi, are of different Muslim tariqa… But teip is also close relatives, brothers, cousins.. Magomed Mutsolgov, leader of Ingush NGO “Mashr”

Later I realized that this confusion in terms misleads researchers and respondents themselves. In real life the distinctions might not be all that important, but for the purpose of this academic study it is vital to differentiate kinship terms properly, in order to avoid erroneous conclusions about social functions of various identities and groups.

Here is a suggestive fragment of an interview:

- I have responsibility for my teip members. For example, when the war started in 1999, I left with my family for Dagestan. My nephews aged 18 and 19 had no parents or closer kin, so I took them with me. Somebody had to take them, otherwise I would later be blamed that I saved myself and left them behind.
- But they were your close kin, your nephews. Did you have responsibility for your closest relatives, or for all teip members?
- Of course, my own kin. Khusein, Dzhalka, Chechnya
Similar confusion sometimes happens with the term ‘Khel’/‘Council’ or ‘Court’.
The word *Khel* can be used for denoting:
- historical Council of Land (Mekkh-Khel);
- village Councils of Elders, local government (Yurt-Khel)
- people’s Court (Khel), a group of seniors who get together for a specific occasion to adjudicate a dispute.

Often when I asked “Do you have a Council of Elders in your village” (meaning Yurt-Khel), I would get an answer “yes” and a person would start telling me about people’s courts (Khel) instead. If a researcher does not clarify what is the meaning attributed to the specific word by the local speakers and is not aware of the multiple usages, she can be easily misled.

Another source of confusion concerned the deterioration of tradition. Most of my respondents were proud of their traditional institutions, positively evaluated their functions and regretted that they were loosing a stand in the society. I noticed that during interviews when asked questions about traditional institutions people would often talk about ‘how things ought to be’, not how they really are. In order to understand how teip or some of its aspects really work now I had to ask more specific questions.

In other times respondents would first reproduce internalized stereotypical explanations about their societies, and only when asked additional questions, would they give clearer – and often less romantic - descriptions of a phenomenon. Here are two typical reactions to the questions about the role of traditional institutions:

**Q:** Did Elders play a role in the Chechen revolution of 1991?
**A:** Of course! But the world of an Elder did not mean anything at the rallies. Everyone was subjected to one slogan of independence – E.S. /. Even if a most respected Elder of a teip would deliver a speech against independence, he would be smashed in a second.

**Q:** Does teip still have a disciplinary capacity?
**A:** Of course!

**Q:** But why was there such a skyrocketing criminality before and between the wars?
**A:** Who would listen to teip then?

Some respondents have clearly overestimated their own influence, or that of their teip. For example, one elderly respondent reported that he forbade his people to take up arms, so no one went to fight in this war. Having finished the interview with this senior I had a short chat with
his sons, and it turned out that one of his nephews joined combatants just a few months before that, and others fought earlier.

Thus, I learnt not to take all evidence at face value, double-checked data, asked specific questions and often summarized the argument of my respondent to her in order to make sure that I understood it correctly. With local scholars and participants of the political process I tried to discuss and brainstorm together, or I shared my findings with them and asked to confirm or refute my hypothesis.

Some of my respondents were reluctant or afraid to speak about the role of clans and kin in the recent political processes. But most of the people I have talked to had spoken with great sincerity for which I am very grateful to them.

4.2. Descent Groups in Ingushetia and Chechnya

As is the case with any social identity, different people attach different significance to teip. Some of my respondents said that teip mattered:

*Chechen social structure is teip-based, everybody should know this. Who does not know this, does not understand anything.* Israil Murtazov, teacher of history, Sernovodsk agricultural college, Chechnya

*Teip has its territorial, ethnocultural particularities. Now many Chechens consider that without teip structure you can loose your identity, you can fall under the influence of others and can be offended or humiliated by other members of the society. Teip is a microcosm. It’s a blood-kinship tie, a linguistic, psychological union, a union of souls and in this world people live.* Khussain Akhmadov, Chair of the Chechen parliament, 1992-1993, Advisor to Mufti of the Chechen Republic

*For me any Kodzoeva is a sister, I am obliged to protect her.* Issa Kodzoev, leader of Ingush national movement Nijskho, Kantyshevo, Ingushetia

*Teip is something which concerns me directly. If my relatives call me, I will be there and I will help with what I can. I will listen to advice of a senior and will direct younger.* Rashid Zakriev, driver, 45, Grozny

Others asserted that teip is gone:

*Clans have disappeared; there remains only formal identity as an attribute of traditionalism. Youth is not even taking this identity seriously anymore. Teips which are in conflict can now intermarry. Chaps will just abduct a bride and that’s it, the hostile teips become relatives.* Yakub Patiev, Ingush ethnologist.
Now youth is interested in history, because they are all educated. But they are not interested in the history of their teip. I think, gradually teip will completely disappear, because everyone has already understood that teip does not matter, the main thing is that we are Chechens. Narkom Dadashev, Senior of teip Biltoy, Nozhay-Yurt district of Chechnya

“For me a teip is just one’s geographic area of origin”. Usam Baysaev, journalist, Chechnya

The teip has decomposed as a result of social processes, because now a person does not depend on the teip as before. Nurdin Kodzoev, Ingush historian

This section will investigate what teip is in the current stage of history of the Ingush and Chechen societies.

Among the questions people frequently ask when they first meet is: "хьнес ть уь хьо" /lit. Whose are you?/ or “малюла тейна уь хьо?” /Which teip are you?/ Learning about somebody’s teip in Chechnya provides a person with local intelligence information about one’s place of origin and possibly present habitation of parts of their family, and helps search for common acquaintances, which is good for establishing trustful communication.

The primary meaning of the word teip is a kinship organization of common descent, or clan. Teip is an Arabic word, borrowed by the Chechen language. According to Chechen ethnologists Garsaev, Chokaev, Khizriev, there are 135-164 teips in contemporary Chechnya (Garsaev Vakha, interview, June 2009). Most teips consist of patrilineal lineages (gaars), subdivided into branches (neki) consisting of nuclear families (dozal). This section will deal with patrilineal descent groups (teips, lineages, and territorial fragments or ‘segments’) in Chechen and Ingush societies and try to evaluate their current social status and function.

Teip originates from one geographic area (usually one or several villages) and sometimes has a linguistic dialect of its own. Some teips have approached very significant numbers, for example Ingush teip “ozdoy” allegedly numbers over 69,000 members; the Chechen teip “benoj” amounts to 15% of the Chechen population. Teips have myths of common decent, a historical motherland and their “architectural heirlooms” – battle towers in the mountains29.

---

29 Towers are traditional vainakh military-architectural constructions, which families used for protection from enemies and for family residence.
Currently most Chechens bear family names, coined from Muslim names of their fathers/grandfathers. Members of one Chechen teip can have hundreds of different family names. Members of *nek’* (sub-lineage of gar) will usually have several different family names. That is why analyzing kinship profiles of Chechen politicians by family names is impossible.

All Chechens are thought to be off-springs of a legendary hero, Turpal Nokhcho, who lived in the mountainous area of Nashkho, which was later called Ichkeria. All indigenous Chechen teips originate from the Nashkho region, the cradle of the Chechen nation. *Mekhk-Khel*, the Council of land, was gathering in Nashkho, and the ancient Chechen capital Motsar is thought to have been located there. According to legends, there was a huge ancient copper in Motsar, which was decorated with plates with the names of all indigenous Chechen teips. Meat was boiled in this copper during *Mekhk-Khel* gatherings which anyone could enjoy. The copper was thought to symbolize the unity of the Chechen clans.

Seniors say that this copper was for the first time destroyed by Imam Shamil who tried to eradicate teip identity of Chechens. Finally, they say, the copper, the stamp and documents of *Mekhk-Khel* were destroyed by the Soviet soldiers after the deportation of Chechens. In Dudaev’s time, just before the war, a replica of this copper was cast at the *Krasny molot* plant in Grozny and ceremonially placed in a village of Starye Atagi during the celebration of the Independence Day on September 6, 1994.

Origins of individual Chechen teips are often traced to some legendary figures, often Arab missionaries who arrived to the Caucasus, and had their sons resettled around Chechnya. Often several teips may consider each other related, since they believe to have originated from siblings.

*Generations of my forefathers lived in Rigahoy, I am the 10th off-spring. Forefathers say that our origin is Arabic. In the beginning of Islamization a religious leader, Ibn Abbaz, came from Samarkand. He arrived to Derbent /Dagestan-E.S./ by the Kaspian Sea. From there he went to a Dagestani village of Zhal and from there founded our village. Ibn-Abbaz had twelve sons and he sent them all to spread the word of Islam. Adam, senior from Rigkhoy teip, Resident of Goragorsk, Chechnya*

*Our first forefather’s name was Beshto. He lived in Georgia with his sons- older son Zumso, middle son Tumso and younger son, Chianti. He left Georgia and settled in the mountains of*
Nashkho. They lived there for a long time and when the sons buried their father they went to the mountains of Zumsoj. At that time no single person lived there. Tumso founded the village of Tumsoj-yurt, Chianti- Chianti-yurt and the oldest son went to the very top of the mountain and founded our village Zumsoj. We are now three brotherly teips-zumso, tumso and chianti. Abdul-Rashid, senior of Zumsoy teip, Chechnya

Some teips have alternative stories of their origin linked to a common craft and even trace the etymology of their teip-name to a common economic activity. Thus, the name of Zumsoy teip is also thought to come from the word “zum”, basket, because people of Zumsoy were once skilful basket weavers. A senior of the village of Rigahoy reported that his teip was producing sables and other weapon, “we originated as a village of craftsmen”. At the same time, both teips have their myth of a common ancestor (stories quoted above). Possibly, the legend about common ancestor emerged later to streamline the teip’s history with similar stories of other teips.

Local scholars agree that a Chechen teip is a social identity based on a myth of kinship, but in essence it is either a kin-territorial unit, or a social-economic entity:

Previously, it was believed that teip is simply kin. It’s a great misperception. Chechen teip has lived through great shocks and it has reconfigured. Some teips were more of a social-economic phenomenon, they developed from craft guilds, other teips originated from nek’, gaar- lineage and are divided into families. There are also new teips, which emerged from incoming populations- a Kabardine teip-cherkzi, Cossack teip-gunoj, djukti- the teip of mountainous Jews. Magomed Muzaev, Chechen historian, Head of State Department for Archive of the Chechen Republic

Teip is a community of neighbors, which is constructed in terms of kinship. When the institution of teip emerged, it was necessary to consecrate it. This is how the sacralization of teip as an organ of kinship took place. Without an ideology, it would not be possible to create such an institution. Said-Magomed Khasiev, Chechen ethnologist, editor of journal “Vestnik Lami”, head of the Chechen Republican Ethnographic Center (Center of Folk Art)

In Khasiev’s view the teip as an institution emerged in response to the processes of feudalization, to avoid establishment of feudal relations between individuals in the Chechen society.

Individuals, families and whole lineages could be integrated into the teip, even in quite recent history. For example, the Khadziev family from the village of Zumsoy is considered to be a most respected and prominent family among the zums- teip, due to the teip’s Elder mullah Mukhadi Khadzhiev, who was a well-known alim respected for his wisdom and outstanding personal qualities. Mukhadi died at the age of 105 in 2007 and I had the privilege of talking to him about
history of Zums (of which he was an invaluable source) on quite a number of different occasions, being his daughter’s friend and staying in their house.

After five years of being friends with the family, when I started analyzing Zumsoj lineages, I discovered that Khadzhievs were not indigenous to Zumsoj. Muhadi’s 4th forefather was from the village of Shatoy, which he fled in the 19th century because of blood feud and found refuge in Zums. “Four of our forefathers are buried in Zumsoy, so we are Zums”, explained his daughter. No one of my Zums respondents seemed to care that Khadzhievs were not the off-spring of their legendary ancestor Zumso.

However, Muhadi’s daughter later told me the following story:

Just before the war one of the Zums people blamed my brother that “he was not even zumso”. My brother was so offended, he decided to get all young men together and tell them that at least four of his forefathers have died in Zumsoj, and if they did not consider him a zumso they should tell that straight in his eyes. But the war started and he left this world with this pain. Rovzan Khadzhieva, Zumsoy, Chechnya

Thus, even if clan members know that they are not biological relatives, the myth of common origin is still somewhat important. If a family has been integrated at a late point in history and teip members remember this, in certain situations (usually of conflict or tension) they may be reminded of their “alien” origin. This means that descent is still somewhat associated with the kinship idiom, particularly in the villages of origin.

Similar stories I have heard in Ingushetia about entire lineages, which have been incorporated into a teip:

- You know how many aliens we have in our familia! In the past we would incorporate entire lineages, slaughter a bull or a sheep and consider them brothers. This way they merged with us, and some of them are not the best people! Magomed Sali-Kotiev (teip Barkinkhoj)

- We also have such people in our familia, they were not respected where they came from and not respected here. Albert Khantygov (teip Merzhoy)

Ingush teips originate from the Ingush mountainous areas, Ingush believe that their common forefather was the legendary hero Ga.
The Ingush teips are often referred to as ‘familiya’ (lit. family name), because many members of Ingush teips have the same family names. Sometimes, lineages would spring out from the teip, which will take their own family name and establish a new familia within a teip but these count by tens, not hundreds (like in Chechnya) and usually have not Muslim, but Ingush linguistic roots. Lineages of Ingush teips are also called ‘familiyas’. Thus, some “familiyas” are teips and they have sub-lineages, while others are just lineages. For example, the “ozdoy” teip comprises 21 subteips and 47 ‘familiyas’. And at the same time Ozdoevs are themselves a ‘familiya’.

A family can decide to start a new lineage for various reasons, often to distinguish themselves from the big teip. Thus, Abukar Gudiev, a member of Ozdoy teip told me that his father changed his family name in the 1920s when he was sent to St Petersburg to study at the financial-economic school. He already had a career as a Bolshevik, intermingled with famous revolutionaries and wanted to differentiate himself from the rest of Ozdoev teip. He took his father’s name Gudi, and coined a new family name of Gudievs (part of Odzoev clan).

Some families reported that they changed name in the Soviet times to secure their off-springs from persecution for repressed relatives. One Chechen respondent said he had recently established his own nek’ (segment of lineage) in response to his kinsmen vanity.

“We started to have arguments over who was of the noblest origin. They thought that they should be the face of our gaar/lineage E.S. /. So I said: If you guys are so noble, why would we interfere in your affairs, we will have our own nek’. They all got so nervous, why would I want to fragment the gaar! And I did it on purpose to tame their ambitions”. Khussein, Dzhalak, Chechnya.

Ingush teip is usually exogamous, while Chechen is not. Members of galay teip told me that they now prefer to intramarry within their teip, but different lineage, or with teips from the same region. I was told the story of their family dispute over the choice of a husband for one of their girls. The girl, who went to the university in Grozny wanted to marry her capital-based classmate and had her mother’s support, while her patrilineal aunts preferred her to be married to a guy from their village, from their teip or one of the neighboring teips. “It’s easier to build kinship
relations if we are from the same area, we do things in the same manner, all rituals and daily routines are the same”. The Chechen teips seem to have been exogamous for quite a while: 99 year-old Khabisat Khasbulatova, from the village of Yandi-Kotar told me that she and her husband were both galaj teip just different lineages and her parents were also both galaj (korchkhoj lineage), and she said it was normal already then to intramarry. Quite a few Chechens I know have both parents of the same teip origin, also some Ingush from big teips, but of different familias (lineages).

Both Chechens and Ingush share a belief that a common gene remains in blood only until the seventh generation. After seven generations young people can marry. That is why it is very important for a Vajnakh man to know his seven male forefathers. Many of the Chechen and Ingush teip members can trace their teip genealogies to 16-17 forefathers, thus, clearly they can marry their teip members. This is seen as another factor of teip disintegration, a ‘clan is not clan when they marry inside’. Idris Abadiev, a businessman-activist of one of the largest Ingush teips of Evloevs told me that he sponsored Congresses of his teip exactly in order for people inside his teip not to intramarry, because this led to disintegration of the teip.

Sometimes the same Ingush ‘familiya’/here last name/ can appear in more than one teip (eg. Tochievs, Sampievs, Keligovs), but this is quite rare. In the Ingush case, knowing the place of origin one can predict the teip belonging with almost 100% certainty. Thus, analyzing clanship profiles of Ingush politicians is easy.

Chechen teip genealogies are non-existent, because their teips have reached such enormous numbers that making genealogies is virtually impossible. However, some lineages (gaars) keep their family trees. Seniors of the teip keloy gathered in the village of Chiri-Yurt to show me the genealogical tree of their lineage - “Bogur-gaar”. The tree was compiled before the Bolshevik Revolution in the Arabic language, and constituted over a dozen of pages with various segments of gaar coming to one forefather Bogur from their mountain village of Khal-Keloy.
Since Ingush teips are much smaller compared to Chechen (except for several major ones, like the Ozdoevs or Evloevs, which have approached the size of the Chechen teips), many Ingush lineages have by now reconstructed their genealogies, which are much more confidently linked to a common ancestor. According to my observations, usually, there would be one (sometimes several) individuals in a familiya, who take a special interest in its history and invest time in collecting documents, data, reconstructing lineages and popularizing them among other members. Usually when I started research on a certain familiya, I would be immediately referred by its members to such a history fiend, who would then give me quite a professional account of familia’s past, would have a good collection of documents and a family tree. The rest of the familia members would usually know some basics: several myths or legends or anecdotes linked to their teip, their common forefather, the location of their battle tower in the mountains, and seven patrilineal forefathers. Many older respondents would have the list of ancestors written down and they would carry them in their purse.

Interest in clan genealogies revived after the collapse of the USSR, as part of the rediscovering of roots and by now many lineages display quite impressive achievements in rebuilding and reconstructing their histories. A big Ingush teip of Malsagovs have published a thick colorful book about the history of their teip and its outstanding people. This encouraged others to start working on similar books. Thus, a history fiend from Uzhakov teip, told me that he was working on the “Encyclopedia of the Uzhakov family”, while an activist from Ozdoev teip said that he did archive work in St Petersburg and Rostov and is preparing a book on Ozdoevs. According to Elder Mussa Aushev, a special memorial stone board was set up in their cemetery with the genealogy of the teip engraved on it, so now anyone could come and learn of their roots. Conversely, Magomed Gazdiev, a successful professional in his mid-thirties who reconstructed the tree of Gazdievs’ and collected rare documents and photographs related to his teip, said that he was not interested in writing a book. “This is just my hobby, what is there so special about teip to write a book about it? I am just curious about my family history”.

113
Ingush and Chechen teips are divided not only into lineages (gar/vyar) and sub-lineages (nek’), but also territorially between different settlements as a result of voluntary and forced relocations. I call territory-based fragments of descent groups- territorial ‘teip segments’ and will treat them in more detail in the subsequent section.

To conclude, Chechen and Ingush teips were once classical descent groups with characteristic idea of patriliality and common descent mythology. Nowadays kinship idiom is still somewhat important for their integrity, but members of teip realize that their blood relatedness is constructed. Chechen teips are very large units who have their histories blurred and obscured in the ancient past and some of them have abandoned the kinship idea altogether. “We are not relatives” – told me members of the galay teip, “we originate from one area”. Chechen lineages and sub-lineages are smaller, usually having clearer genealogy and more neatly approximating the idea of biological kinship. Ingush teips with several exceptions are much smaller than Chechen ones and have more confident kin-based genealogy, Ingush lineages are pretty congruent with biological kinship patterns.

Thus, my research shows that, as Gellner predicted, the relationship of belonging to a clan satisfies the initially set up criterion for classifying a social relationship under the rubric of kinship structure, because clan is a concept essentially related to other concepts, like “lineage” which in turn has a systematic congruence with some kinship affinity (Gellner 1987:168). Large size adds a higher degree of social construction to a kinship unit, but still one cannot become a teip member just if they want to do so. Even those who have been part of a clan for over a century can be reminded of their alien origin and this runs counter to Collins’ idea that a clan, “which persists from primordial times” can incorporate classmates and friends. And least this is definitely not the case in Ingushetia and Chechnya.

4.2.1. Is Teip a Social Organization? Looking at Mechanisms for Maintaining Teip’s Unity
This section looks at teip as a social organization and aims to establish whether the mechanisms which used to maintain teip unity in the past are still working nowadays. On the basis of interviews and analysis of historical sources, I identified six mechanisms, which used to maintain unity of a Vajnakh teip, such as common residence, common ownership of land/property, common defense / justice, rule of Elders, religious rituals (funerals, weddings, mold, and sakh).

I will look at all five and see what remains today to maintain the unity of a Chechen/Ingush clan.

1. Common residence

As I have shown in chapters 2-4 the big teip has not only fragmented into lineages (gaars) and sub-lineages (nek’i), but also became dispersed between the mountains and the plain and among several settlements. People resettled on the plain, usually to the pre-mountainous and lowland areas adjacent to their mountainous areas of origin. They preferred to resettle to places, where their relatives had already lived or which were connected with the hills economically. Segments of teips resettled at different times, starting the 16-17the century and continue to resettle today. Usually one settlement on the plain could not accommodate the entire group of relatives which moved, this way teips fragmented into several territorial segments.

It was not easy to descend from the plain, because in the 18 century this land belonged to the Kabardines, there was slave trade, so anyone insufficiently protected could be abducted and sold to slavery. But eventually Aushevs settled on the plain and founded their own village of Surkhakhi. Now 500 families of Aushevs live there. We all are off-spring of one son of Aush – Chirko. The off-spring of other sons of Aush settled in other villages. Eventually we were fragmented between Ekazhevo, Sleptsovsk, Karabulak, and Achaluki villages. After the deportation in 1957 we tried to get back together in own native village of Surkhakhi. Not everybody got in, and now many different teips also settled there. Mussa Aushev, director of house of Folk Art, Elder of Aushev teip

Some lineages fragmented as a result of blood feud:

We used to live in a place called Dlinnaya Dolina in Prigorodny Region 3-4 generations ago. Then we had blood feud there. A brother of my grand-grandfather was then a teenager, a shepherd, and at night when thieves attacked his herd he fired and accidentally killed a man. Because of the blood feud our entire familia had to leave that place. We divided between four
villages: Mochkhoy, Kantyshevo, Plievo and Barsuki. We still reside mainly in these four. Mohmad-Sali Kotiev, senior of Kotiev familia (Barkinkhoev teip)

The process of descent to the plain continues. During the last Russo-Chechen war over a dozen of mountainous villages have been fully or partially abandoned. Usually when fleeing from the village of origin, mountaineers try to settle in a compact manner, to the places where their family members already live. This is thought to be a way of social support before one gets established in a new place, also if there are many close people residing together they feel more protected and have more weight in this locality.

Thus today, both Chechen and Ingush teips are fragmented into numerous lineages (gaar) and sub-lineages (nek’) but also between settlements (territorial segments). They are dispersed all around the territory, but each teip may have 4-10 villages where they live in quite significant numbers. Representatives of some big teips (eg. Chech.-benoj, alleroj, biltoj, Ingush- ozdoj, jovloj) reside in almost every settlement. In Ingushetia territorial segments are stronger than in Chechnya, members of teip X residing in the same village of Y call themselves X’s Y. (Surkhakhi’s Aushev’s, Barsuki’s Kotievs, Achkhoy’s akki etc). In the table below I demonstrate the fragmentation of the 20 teips/lineages under my study according to settlements. The list of settlements is not exhaustive, but includes the ones with significant concentration of kin-groups. Representatives of all teips reside in Grozny, representatives of 40-50 teips reside in the Chechen towns of Urus-Martan, Argun and Gudermes. The same applies to the towns of Nazran, Karabulak, Malgobek and Magas in Ingushetia and to many large villages. Urban centers are not included in the table.

</table>

Thus, territorial unity, common habitation and lineage do not characterize contemporary teips or lineages.
2. Common ownership of land/property

When travelling in the mountains I often heard the phrase “every plot of land here is someone’s”. Although the Russian state does not recognize teip’s ownership of land, it is generally believed that certain teips “own” certain territories in the mountains. In Chechnya in Dudaev’s times many disputes broke out over teip territories. However, if we look closer at such disputes, we will see that their participants were residents of the immediately affected areas:

We have a land dispute with the neighboring village of Meskhety, our youth is fighting with each other, provoking each other. Before 1933 we lived a bit further from here, but because of landslides, the authorities decided to resettle us here. Originally this was the land of Meskhety, alleroy teip. And our land was given to them for pastures etc. They think that the land on which we live now is better and it belongs to them. In 1993 we had a mass fight over it, village against village. Thanks God, without fatalities. This was pure luck. Ruslan Tsokuev, head of administration of the village of Zamaj-yurt (Biltoj teip, Nozhaj-yurt district of Chechnya).

In Ingushetia I have heard many times that the town of Nazran could not be the republic’s capital, because there “all land is owned by someone”, so there is no place for administrative buildings. When I questioned further I have learned that these slots belong to particular extended families.

Entire familias “own” their historical mountainous areas with battle towers, which have been closed for settlement since 1944 and are now part of the frontier sanitary zone with Georgia and in addition a nature reserve. My Ingush respondents said that they never heard of teip-to teip disputes over land, although certain families could argue over division of common pastures of lands or hey fields in a village.

Inside one teip, the territory is divided and “owned” by individual extended families. Thus, in 2008 the Chechen authorities started the reconstruction of the abandoned village of Zumsoy and promised to build 10 houses for returning families, a school, the buildings of administration and ambulance. Previously, Zumsoy consisted of a number of individual farms scattered around vast area 2-3 kilometers from each other. The condition of the republican authorities was to build all houses close together in the center of the village and create a compact settlement. The

---

30 In Aushev times, it was possible to resettle one or two families in each “tower complex”, but the area does not have the infrastructure for mass residence of people.
negotiations came to a stalemate: the residents of Zumsoy refused to take such houses (offered for free by the state), on the grounds that the land on which they would be built belonged to some other family. “Why would I move into a house, which does not belong to me? One day the owners will come and claim this land from me. I want my own house on my family land”, explained one of the villages. This familial right to land is not recognized by the state.

Thus, contemporary Chechen and Ingush teips’ ownership of land is purely symbolic, and when disputes emerge, they do so usually among territorial segments of teips of immediately affected settlements. Inside the teip in the mountains the land is also divided between individual extended families and these distinctions are respected. The only property commonly owned by the teip are architectural heirlooms- their family battle towers. But even they are now considered state-protected cultural values, so familias cannot even repair their roofs without permission from the Ministry of Culture and without involvement of professional architects.

3. Common defense

Before the deportation we lived in the mountains. At that time, there was respect between people. The teip at that time would not abandon its men in trouble. There were many thieves they could steal cattle, property, even people. A strong teip protected its members. Said- Magomed Elsanov, Senior of teip Bosoj, Samashki, Chechnya

Many of my respondents regretted that the teip is not offering protection to its members as it used to do before.

Ingush were respected when we had a teip-based society. The teip protected each person, down to the smallest boy. And now we do not have teips. If there were teips, would the authorities have dared to violently disperse demonstrations? Teips would have long ago torn this Zyazikov\(^\text{31}\) into pieces. Batarbek Akiev, head of collective farm “Dolakovo”, Ingushetia

Almost all my respondents emphasized that blood feud and defense in the face of humiliation fall in the domain of the descent groups and remains about the only working mechanism for their mobilization. In Ingushetia, the whole familia (lineage) or teip (if it’s a small or average teip) may mobilize in case of blood feud:

“The whole familia will raise, but the mortal hit should be inflicted by the immediate relative. Usually all the work is done by youth in the teip, and the last shot is done by those, who were offended.” Nurdin Kodzoev, Ingush historian

\(^{31}\) President of Ingushetia in 2002-2008.
In Chechnya, it is not the teip, but the lineage (gar) or more often sub-lineage lineage (nek’), which support the blood feud:
*It’s a big misperception that blood feud is teip-based. Take our teip ‘alleroy’; it is one of the largest Chechen teips, and then take ‘benoj’, another largest teip. We can put forward 30-40 thousand mature fighters, so do they. It’s a civil war if we announced blood feud to each other!*

Said Magomed Khasiev, Chechen ethnologist

What the descent group does, it “expresses solidarity” to the offended family (its members stop talking and intermarrying with representatives of the enemy teip (lineage), leave public events demonstratively if their enemies show up there, or even start fighting with them once they see them in the street). It supports revenge financially, with connections to sort things out with authorities once vendetta has been fulfilled etc. Killing or humiliation of a teip/lineage member is still considered to be an offense, which injures dignity of the entire group. Adequate response is important for preempting attacks in the future: “If you let it go once in respect of Kodzoev, then everybody will think that one can behave freely with Kodzoevs. We have several times responded very well, so now nobody wants to deal with us” (Kodzoev, interview 2009).

All my respondents spoke of blood feud as the heaviest burden any family can imagine (for any side of the conflict). That is why in almost 99% of cases unintended murder (eg. in a car accident, inattentive handling of weapon) is being forgiven after “maslat”, a special ceremony of reconciliation. However, intentional murder is seldom forgiven.

In the Soviet times vendetta, but even more so reconciliation of blood enemies were an inexhaustible source of corruption for regional police. “Sometimes a person was killed in a car accident. In such a case usually families settle the issue peacefully. Of course, after the settlement no one would go file a complaint to the police. So, sometimes you could have a car accident with 5 corpses and no one punished. In the Soviet times the investigative authorities took bribes to close the case. They would be darting about these families, trying to sniff out whether they have reconciled. And once they did- here would police immediately appear to get their juicy bribe” Mussa Aushev, senior of Aushev teip. Members of descent group would help arrange things with the authorities and collect money to pay bribes.

Today, as my respondents claim, if blood feud is proportional, the authorities do not intervene:

*Recently there was a case, when one of the President’s guards hit a Kozdoev. Kodzoevs responded, then the others started shooting and shot this Kodzoev dead. Kodzoevs in return killed this officer of the President’s guard… The President came up to the site, one of the guys explained what had happened, and how it was, that the killed one was guilty, so no one*
interfered, the President left and let the families settle the issue. Nurdin Kodzoev, Ingush historian

Usually, risk of punitive actions on behalf of the state is not an obstacle for performing blood feud. In the Soviet times, if a murderer was arrested oftentimes the victim’s family would not testify against him to avoid his imprisonment, which would for years postpone the possibility of revenge.

Blood feud and humiliation between ‘common’ Vajnakhs are usually settled in compliance with the traditional mechanisms. In the overwhelming majority of cases, the lineage/teip is unable or unwilling to protect its member against arbitrary state violence or violence committed by a state agent of Vajnakh nationality. However, I documented one case in Ingushetia, when a segment of an Ingush teip was able to defend its members against state security agencies and another case, also in Ingushetia, when the teip was able to mobilize and investigate an abduction by federal security servicemen, albeit too late, the person had already been killed.

On September 18, 2007 two cousins Aushev, both Magomeds, were abducted at the outskirts of Grozny: when they were getting in a cab coming from Grozny railway station to Ingushetia, unidentified armed men in masks forced them out of the taxi, into their car and drove away. The taxi driver quickly informed the father of one of the cousins- Maksharip Aushev - an affluent Ingush businessman, who immediately took about 25 men of his relatives and in a convoy of 6 cars rushed in full speed to Grozny. Maksharip paid his way at every checkpoint and traced the root where the two young men were taken. Next morning Aushevs from the Surkhakhi village organized a protest rally, blocked the main thoroughfare and the railroad in Nazran demanding to release the young men. Soon relatives of other abducted people, youngsters and sympathizers joined the protesters, who remained there for two days. Police tried to disperse them, but the protesters remained still, the policemen refused to shoot in the crowd. Protesters prepared tents and coppers for boiling meat, and announced that they would stay until the young men are returned to their families. At 3 a.m. Maksharip Aushev received a phone call and was told to pick up his chaps in Shatoy police district in Chechnya (faraway mountainous area). Later it turned out that the young men were tortured for several hours and then taken for execution, when their abductors received a phone call with an order to release them.

This incident was a prominent example of familial solidarity, which was supported by other like-minded Ingush. I asked relatives of other abducted Ingush men (around 180 were abducted since 2002), why the Aushevs managed to intervene so successfully? Most of them explained that this was because 1) Aushevs were an influential teip, but most importantly, the authorities were afraid that Ruslan Aushev (still very popular ex-President of Ingushetia) might come to the republic from
Moscow and lead the protest which would then transform into a mass civic movement. 2) Maksharip Aushev himself was a very energetic and affluent man, he managed to mobilize relatives and friends.

There was another episode when the members of (large) Ozdoev teip managed to carry out an independent investigation of the abduction, but they were not as successful as Aushevs, the abducted person had already been killed.

Parents of other abducted young men in Ingushetia told me that their teip members did not offer them any real support or protection of that kind. On the basis of these two episodes of action and of almost 200 hundred episodes of non-action, I can conclude that two elements are conducive to consolidation of teip when confronted with the state: 1) size and assertiveness of teip and 2) the presence of an influential leader who can mobilize kinsmen around him.

Most of my respondents, especially in Ingushetia, emphasized that in cases of blood feud teips only “provide background”, “express solidarity”, but the actual murder is carried out by the closest kin. Even in the unique case of recent mobilization of the Aushev teip in Ingushetia, just a small part of the teip was mobilized, supported by the like-minded Ingush. Aushev teip numbers around 9,000 people, but the protest rally altogether was about several hundred (which included lots of non-relative supporters).

In Chechnya there are many instances of intra-teip blood-feuds, mainly a result of recent wars. Such instances have also been registered in Ingushetia, where, for example, Magomed Evloev, the owner of oppositional Ingush news-portal ingushetia.ru was assassinated on August 31 2008, after an illegal arrest by a security serviceman who belonged to his teip, having even the same name - Evloev.

To conclude, blood-feud and retaliation in case of humiliation is the strongest (and as many say, the only) mechanism which can mobilize a descent group in Ingushetia and Chechnya today. In Chechnya the lineage or segment of lineage, in Ingushetia the teip (if a small one) or lineage will offer moral and financial support in retaliation, however, retaliation itself is the responsibility of
the closest kin. I will briefly come back to this phenomenon in the section dedicated to kinship and explain how it works within the extended family.

4. Rule of the Elders

Respect of seniors is widely pronounced and displayed in both Chechen and Ingush societies. When an aged person comes into the room, everyone gets up and gives him/her the best place, does not sit down until he invites them to (and sometimes not even then), does not interrupt him when he speaks. Elders are present at public events, religious rituals, and political ceremonies. All politicians seek symbolic support of “the Elders”.

In the past Vajnakhs were ruled by Councils of Elders of villages, selected from every teip. Adjudication was as well performed by the Elders. Mekhk-Khel or the Councils of Land were comprised of the respected Elders from teips or regions.

Today, the world ‘starejshina’ (Elder) is rarely used, more often is the term “starik” (Senior, Old Man) is in circulation. All of my respondents noted the declining role of the seniors, however, each of them evaluated the reasons and the degree of this decline differently.

The most typical explanations have been:
“Very few seniors remained. All of our seniors have died during these turbulent years”;
“This is a bad generation of seniors. They were spoilt by the deportation. They are hungry or have deportation syndrome”;
“All the best seniors are sitting at home because this is not the right moment to speak up; those who are conspicuous in politics are trash”.

Each of these explanations has a grain of truth in it. Indeed, during the recent years of conflict and war the life expectancy went down, many elderly people died or became ill:

_We have respect of the elderly, but we don’t have the elderly. In our teip all our elderly are either very ill or dead and I have to perform all the senior’s functions. And very often when I come to talk to other families they don’t even have my peer to represent them! I have to deal with the youngsters!_ Mussa Aushev, Director of House of Folk Art, senior of Aushev teip (78 years old)

As will be discussed in the subsequent chapters, in Dudaev’s times and during the 1992 Ingush-Ossetian conflict many politically active seniors discredited themselves. In the more recent years we have seen how the same seniors praise each new coming president. It is commonly believed
that they are being paid for this or somehow encouraged otherwise. The fact that the Elders can be corrupt is commonly believed to be the consequence of deportation. ‘They have seen famine, so they are now hungry for material goods’, many of my respondents explained. There was an implication to such statements that the next generation of seniors would be better. The fact that elderly are praising the authorities is also thought to be the result of deportation syndrome: ‘They are fearful; they have lived through genocide’.

I have heard from many respondents that ‘the real Elders’ are ‘sitting at home’, and they do not want to turn up in public, because 1) “the time is not right” 2) they do not want to be seen in company with the corrupt ones.

To the questions “when will the time be right”, I would get response “when really important questions are solved, like the fate of the nation or territorial issues”.

“You cannot see respected Elders in public now. They are all at home. Those whom you see on TV is trash, who will sell their motherland for a ruble” were the words of an Ingush scholar who expressed a rather wide-spread opinion. “There is a difference between an Elder and an aged man. He might have had a frivolous life and now he has aged and he has grown a long beard and he wants to be an Elder”? was another common opinion put in a rather straightforward fashion.

In short, the evaluation of seniors in the society has become merit-based.

After years in the field my understanding of the declining role of seniors is different from those quoted above by my respondents. I see them loosing their social functions mainly because the society changes.

First, according to all my respondents, neither Chechen nor Ingush villages have Councils of Elders anymore. Sometimes administrations may invite and consult respected seniors in a given village, but this is a) initiated from above b) has an ad hoc basis. I will discuss it in more detail in section 4.5.2 of this chapter. Thus, seniors’ self-government does not function at the village level anymore.

Second, at the country level, Mekhk-Khel (Council of Land) did not function in the Soviet times. In Dudaev times in Chechnya and in 2007 in Ingushetia there were attempts to revive Mekhk-
Khels. These attempts failed and discredited the idea. The story of Mekhk Khel under Dudaev will be analyzed in some detail in chapter 6, as to the Ingush Mekhk-Khel, it was organized as part of a powerful protest movement aimed to replace President Zyazikov in 2007. Among other things, the opposition created ‘Mekhk-Khel’, ‘elected’ representatives of teips and appointed a 21 year old (!) man, Akhmed Kotiev, as its chair. In two years Mekh-Khel met several times and then leaders of the opposition pompously announced that they ‘discovered’ that Kotiev was “an FSB agent”. Clearly this Mekhk-Khel was quite a ridiculous attempt to use the old symbol for modern political purpose. This attempt failed, two thirds of the republic had no idea that it even existed and those who were presented as “elected representatives of teips” were simply supporters of the opposition from various teips.

Third, the Elders loose their religious authority. “People’s Islam of the forefathers” is not very popular with the youth who are now seriously interested in religion and have young learned scholars to turn to when it comes to religious issues. Most of village imams are either middle aged or young. The role of village imams has grown significantly. This matter will be tackled in more detail in section 4.5. of this chapter.

At the same time, seniors do preserve a very prominent function in rituals and in disputes, in what is called People’s Courts (Khels). Seniors still enjoy a lot of respect; nobody will be rude or aggressive towards an elderly person that is why they can sort out conflict situations - bride abductions, blood feud and other disputes. If someone wants to get married, they ask their seniors to go to the family of the bride-to-be and make the proposal. The seniors of the bride-to-be receive them and give their response.

In case of a dispute, a person can choose his own judge. Usually this is a respected senior person, known for his command of adat and sharia, with immaculate reputation. If one of the sides is against a particular senior he would not be invited. This improvised court which takes place in somebody’s home is called Khel. It is created ad hoc and functions for adjudication of this particular dispute. A person can also choose, whether he wants the dispute be settled by the adat
(customary law) or the *sharia* (Islamic law), although the two have become very closely merged. My respondents noted that recently more people tend to prefer to resort to the *sharia* for resolving disputes, although the procedural part of adjudication usually follows the *adat*.

In 1990s some teips in Ingushetia elected their teip Councils of Elders. These councils consisted of respected elderly, who were supposed to represent teip in case of conflicts or at major funerals or other events. According to Osman Aushev, the Chair of such a teip Council of Elders, and Abukar Gudiev, a chair of another one, usually the actual work is being done by young assistants, who coordinate and organize things in a given village or within a given lineage under supervision by the seniors. Such councils usually comprise seniors from each of the settlement where representatives of this teip live in large numbers and representatives of various lineages (familias) within this teip. Such representatives are not always the oldest, but usually the most respected in a given community. The councils do not meet unless something happens (bride abduction, murder, major funeral) when they are needed.

The forth factor which contributed to deterioration of the role of seniors is market economy and modern political process. I noticed that today the ritual life is regulated by seniors, but in the actual life of the community younger energetic leaders, often with due education, money and connections are needed. Idris Abadiev, a successful Ingush businessman, who invested a lot in the revival of his Evloev teip, said that he was elected the member of Council of Elders, being just 40 years old. According to Idris, the chair was elected because he was a *mullah* and an old man, but all the actual things were done by younger members. Mohmad-Sali Kotiev, senior from Ingushetia, said that the same was true of their lineage – they had the Elder, but younger men did everything in his name, having coordinated it with him. Akhmet, in his early 50s, an energetic investigator of the Republican Prosecutors office in Chechnya, seemed to be the key coordinating person in Bogur gaar (lineage) of Keloy teip in Chechnya.

The Ingush historian Nurdin Kodzoev confirmed this observation: “*In the past the Elders had respect, when the trouble came they all united and made decisions and took responsibility for them. But now each teip is led by young people. And elders stay at home. 40-50 year old people are the actual decision makers in their familias in Ingushetia*.”
Thus, the institution of Elders has deteriorated and seniors retain their function in rituals, sorting outs and symbolic legitimization of certain public politics. Having said this, I should re-emphasize, that respect of age remains high in both societies under study.

5. Religious rituals (funerals, weddings, mold)

Life-cycle ceremonies, especially weddings and funerals, are attended by huge numbers of people in Ingushetia and Chechnya. To express condolences at funerals is a must for all relatives, neighbors, friends, colleagues of the deceased and his/her family members. Usually, according to Muslim tradition, a deceased should be buried on the same day before sunset. Subsequently for three days in the house of the deceased a funeral is taking place, with people coming and going, expressing condolences to the family. The ritual differs according to vird, some families feed their guests others do not, some have groups of murids performing zikr (religious dance), and others do not. But nonetheless, as Salavat Gaev of a Chechen village of Gekhi-chu put it “when somebody dies in this village we leave all our work and are there for three days with them to support”.

The closest kin and neighbors stay for three days, more distant relatives and people from other settlements usually visit once. Oftentimes, groups of close relatives get together 20-50 people and in one convoy of cars arrive to the funeral together and depart together.

“We do not go to funerals or weddings one by one, we get all together, 30-50 people. Everybody knows that here arrived Aushevs from Surkhakhi of this and this family. I attend funerals of all Aushevs... To certain important funerals or weddings all Aushevs come. Recently Bashir Aushev, the Secretary of the republican Security Council, was killed, so all Aushevs attended the funeral. But this was a special case”. Mussa Aushev, director of House of Folk Art, Elder of Aushev Teip.

Mussa Aushev is among the oldest and most respected members of his teip, this is why he is invited to attend all weddings and funerals. Mussa knows all older people in his teip, who participate in ceremonies. Since teips and lineages are big, funerals of weddings happen almost
every week, and this is the main public space where seniors of a teip meet and it is also a mechanism for maintaining teip/lineage cohesion in Ingushetia.

In Chechnya teips are much bigger so people tend to attend weddings and funerals only of representatives of their lineage or those with whom they maintain kinship relations. However, some respected elderly are invited to ceremonies of other teip lineages and other teips. Funerals and weddings involve financial contributions which is another way of social support to the deceased family. These contributions come back to the person, once something happens in his/her family.

Attendance and involvement in funerals/weddings is age- and gender-specific. Usually all the seniors of the family should express the respect in good and bad events on behalf of their kin. Middle aged people do not have to attend in all cases; one or two siblings from a family can come on behalf of all. Young peoples’ attendance and involvement in ceremonies of distant kin is even less mandatory. In many families women do not attend funerals, in some they do, but they sit separately from men and express condolences to the women of that family. As a result, according to my respondents, seniors know all (in Ingushetia) or many (in Chechnya) of seniors in their teip/lineage, middle-aged people know each other much worse and usually only those of their lineage, and young people often do not know each other.

However, within the segment of lineage, all adult members attend all weddings and funerals.

“Not a single Sunday passes without a wedding of one of our village’s Chapanovs. We do not need to organize any congresses or councils, all political questions are resolved at funerals or weddings! If someone gets married, the day or two before it we get together there, and then the wedding itself, and then almost everyday, we, Achaluki’s Chapanovs, somehow bump on each other. I know all elderly of the Chapanovs, I do not know all people of my age, and youngsters-they grow like mushrooms you cannot remember them all”. Vakha Chapanov, Achaluki village, Ingushetia, 38 years old. Chapanov is a lineage of Gorbakov teip

Weddings and funerals are not the only events which are attended by representatives of descent groups. Sometimes members of lineage meet up when there are religious rituals, like mold and sakh – sacrifices with readings of Koran. Thus, funerals/weddings and religious rituals, are
important platforms where members of lineages, sub-lineages or territorial segments can meet, and where important seniors of entire teips can get together.

I conclude that in Chechnya teips are not social organizations, they have decomposed and do not retain mechanisms of maintaining cohesion. Lineages, sub-lineages and territorial segments of lineages perform the function of descent groups, which is limited to mutual attending of ritual ceremonies (weddings, funerals, and mold) and support in cases of blood feud or humiliation. Other mechanisms, which used to maintain teip unity in the past, such as common residence, common ownership of land/property, rule of Elders, have ceased to exist. Teips do not reside together anymore; many have lost their villages of origin and are fragmented not only along lineages/segments but among settlements. Each teip can have 5-10 villages where its members are concentrated in significant numbers. Teip ownership of land and cultural heirlooms has become more symbolic than real. Elders have long ago lost their political function in the society and are contained to the domain of the ritual. Even the Councils of teip Elders set up as part of the retro fashion on teips were in fact run by middle aged activists rather than Elders. Blood feud has essentially migrated into the domain of the extended family, the teips expresses solidarity and supports financially, but the actual killing is done or commissioned by the immediate kin of the victim. Moreover, there are many cases of intra-teip vendettas.

Chechen teips have completely deteriorated, while in Ingushetia some small or average teips retain some degree of cohesion, which is also limited to ritual and blood feud. Ingush lineages (familias) are more tightly knit units and can be considered social organizations.

4.3. Kinship

4.3.1. Categories of Kinship and Relations between them
When speaking about teips, many of my respondents emphasized that although teip matters to some degree, the actual routine life is linked with one’s close kin. Vajnahs are very kinship-rich societies. Close relatives are called tsijna nakh – («цӏинйна наз” - Chechen, “цӏе наз”/ «цӏенгара наз» - Ingush) – lit. people of the same hearth, house. «Tsijnanakh» includes
patrilineal relatives: *shichoy*- (шичой) - cousins, *myakhchoy* (мяхой) – second cousins, *vovtkhar (m)/yovkhatar (f)* (вовтхар/йовхатар), third cousins. The word *yovhatar* stems from the word ‘warmth’, which indicates that this relationship still contains some degree of closeness. For fourth cousins there is no special term, although they can sometimes be included in *tsijnanakh*. After them all kinsmen are called *gergarlo* – i.e. relatives. Chechens have another important kin-term- “*yukyokushverg*” (Юкъойъкъушверг)- ‘dividing’. This is a relative, which is a dividing line between kin and non-kin. Beyond *yukyokushverg* people can marry and there is no blood feud responsibility for each other.

There is a distinction between kin terms on mother’s and father’s line, thus relatives of mother’s line are called “*nenahoy*” (ненахой), on father’s side – “*dekhoy*” (дехой). Kinship on mother’s and father’s side is distinguished by prefixes. The prefix “*ne*” will be added to kin terms on mother’s side (nenavash- uncle on mother’s side, netsi- aunt on mother’s side, nenana, nenada- grandmother and grandfather on mother’s side) and prefix “*de*” to kin terms on father’s side (devash - uncle on father’s side, detsi- aunt on father’s side, deda- grandfather on father’s side, denana- grandmother on father’s side).

The *de* and *ne* prefixes are used only when one wants to specify the type of kinship. When one directly addresses his grandfather, she would seldom say “nenada”, but would simply say ‘dada’. The same with grandmothers on both sides, they will be addressed simply as “nana” or “baba”, similarly with uncles on both sides. Thus, kinship terms in Vajnakhs societies suggest that the closest relatives among ones’ kin are until third cousins, that relatives of mother’s and father’s side are distinguished linguistically, however, when a person interacts with his kin, she does not differentiate between matrilineal and patrilineal relatives, kinship is perceived as cognatic.

Relatives through marriages are called *zakhalsh* (захалш), wife’s relatives are called *usttsa* (устта). Ethnical code presupposes a special treatment of each of these categories of relatives.

In Ingushetia these rules are still very strictly observed. Relatives on female side are very important and one has to express more respect to them, than to one’s patrilineal kin. For
example, Ingush have very strict rules of how people should be placed in a room or at a table during family gatherings. The more respected people, should be placed further from the doors in more comfortable positions. Then everybody occupies places according to their age and kin status. Nenkhoy, zakhlysh, usttsa - relatives on mother’s, female sibling’s spouses’ and wife’s side are placed “higher” than patrilineal relatives.

A woman, once she gets married becomes part of her husband’s family, but she remains under protection of her relatives. In Ingushetia the husband does not keep physical contact with his parents-in-law, he is obliged to avoid seeing them, does not park his car near their house and he visits the house of his wife’s relatives only when her parents are not in (which signifies that he recognizes shame for sexual contact with their daughter). The husband does maintain close relations with his wife’s siblings and other kin. Once a person gets married, the family expands by a large number of persons and his obligations increase; with each sibling getting married a nuclear family significantly enriches its kin.

Thus, Ingush and Chechens are connected with many teips and lineages through various kin-ties – matrilineal, through marriage, marriage of siblings, one’s own marriage. Oftentimes especially in Ingushetia, relations with relatives on female side are very close, and even more significant to a person than her own lineage relations.

In the previous chapter I quoted Fortes, who claimed that kinship relations were between individuals, while “clan relations” - between groups (Fortes: 1953:33). Fortes emphasized the importance of bilateral kinship relations for binding together the major groups by filiation through marriage. Fortes uses the term “complementary filiation” to refer to the recognition of ties through whom descent is not traced. In daily routine of Vajnakh societies complimentary filiation though marriage is as prominent as patrilineal relations.

4.3.2. Kinship Relations and Kin Solidarity
The actual life of individual in a Vajnakh society is placed within the tight network of multi-vector kinship relations. As everywhere, it depends on a person, how intense are his/her kin ties, but on the average, Vajnakh family life is much more intense than that of a Russian. Sheer numbers of relatives make this happen. An average extended family would include 3 generations vertically and relatives in the three degrees horizontally (up to third cousins). Given high birthrates in the region all this kin amounts to a large group of relatives.

“We are a big family, I have ten brothers and four sisters, all of them are married with children, I have 35-40 nephews and nieces, I need to see them at least once a week. So I hardly have time running around, remembering everybody’s birthdays and other important occasions”, Alikhan, Gamurzievo, Ingushetia

Alikhan’s family is quite exceptionally big, but many of my local colleagues have 5-7 siblings which keeps them busy just within the immediate family. According to my observations, cousins, uncles and aunts on both patrilineal and matrilineal sides are very close relatives and play an important role in the life on an individual.

Family solidarity is very strong. If a child is sent to study outside the republic, then usually with a close relative. Other close relatives are likely to follow:

At the age of 16 I finished school and went to Irkutsk to visit my cousin for vacation. Some years before that my cousin went there to work at construction of BAM\(^{32}\), got married to a Russian, graduated from a Pedagogical university and stayed there. When I arrived my cousin said- why would you go home, ask dad to send us your school certificate, you will take exams to the University here. The documents came late and I could not take exams to the University, so I entered a vocational college. Later my aunt, two of my sisters and my brother joined me in Irkutsk. One sister finished a Pedagogical university, another- the College of trade. Our older brother came to Irkutsk in order to find a job and support all of us while we were studying. We bought a flat and all lived there for several years. Then we returned to Ingushetia. Akhmet Barakhoev, resident of Nazran, Ingushetia

In times of trouble family solidarity was as strong with female side relatives as with patrilineal kin. I heard numerous stories when in deportation families were helped by relatives on the female side, who got settled in big cities and assisted them in moving. During recent wars in Chechnya many families found refuge with their nenkhoy (mother’s relatives).

\(^{32}\) Bajkal-Amur railroad
However, the most intense family relations lie within relatives up to second cousins:

_For me my family is first of all my children. Then my brothers and sisters. If a trouble comes, who will help? This is my immediate solidarity group. Then come cousins and second cousins, these are also very close relatives. In our household four generations live together- cousins and second cousins (these are kids of cousins). We all live as one family household._ Khazdimurat Kostoev, a leader of the Ingush national movement “Nijskho”, Ekazhevo village, Ingushetia.

Close kin take the leading role in all rituals related to life-cycle events, especially funerals, they help to organize weddings, contribute with money and food, women cook and clean up after such events. The Ramadan holiday is another mechanism of maintaining close kin solidarity. For Ramadan for three days all men have to visit their neighbors and relatives on all sides (starting with kin affiliated through marriages), wish them a happy holiday and if time permits to have a meal with them. On Ramadan all tables in each house are laid and people receive guests, who come in and out in huge crowds. First, one has to visit elderly and ill on that day, so seniors receive much attention, even if they live in distant villages. Both for Ramadan and Kurban-Bajram- two main Muslim holidays, close kin men go to cemeteries to pray together.

4.3.3 Co-habitation: Kinship enclaves

Many of my respondents said that in order to maintain close relations relatives should live close-by. In Ingushetia many settlements still represent a patchwork of kinship enclaves, which are usually segments of ‘familiyas’, i.e. patrilineal kin. As I have shown in table 4.1. every familiya has one or several territorial centers, where they settled originally when descending from the mountains and from where they branched out to other places. Since Ingush families are growing fast, familial centers cannot accommodate all the new families, so a son would leave his parents and buy land elsewhere. His brothers are likely to join him. Soon a small kinship enclave will emerge in a new place. “Our Mezhoevs live in Barsuki village, but there was not enough place for everyone there, so we started buying land at Gvardejskaya street in Nazran. We already have 10 houses here in Nazran”, explained one of my respondents. One or several lineages in a familia can be found in a specific village.
These kinship enclaves are more often patrilineal, and usually are made up of tsijnanakh (extended family). This is explained by a commonly shared belief, that one should live close to one’s dekhoy (patrilineal kin) because in case of conflicts or problems they are the ones to offer assistance.

I don’t have brothers, but my cousins on my mother’s side live in Dolakovo. They tell me, why don’t we buy you a land slot here with us? I don’t go for it. Imagine, I settle in Dolakovo and one day I have a conflict with somebody. Immediately people around will say: this is this Merzhoev, who came here and settled with his mother’s kin. And now he is making trouble. They will already look down at me that I am not with my father’s relatives. My mother’s cousins would of course interfere on my side, just to show the people around that they are not leaving there relative alone. But if a more serious problem occurs, they will say-hey, you understand, you have your own kin, they should help you. I will then have to turn to my father’s relatives and ask for support. And they would tell me: why on earth did you settle with your mother’s relatives!? You should have come to live here with us, and then in case anything happened, we would have always been nearby... Magomed, resident of Nazran

Invisible borders between kinship enclaves, especially the ones considered patrilineal, are observed and respected. It is next to impossible to buy land in such enclaves for a stranger.

Vajnakhs have their own traditional rules of property rights. If a piece of land is considered to belong to some family it will remain as such, even if the authorities take it and give to somebody else or build a kindergarten on this territory. Once authorities change, this family will reclaim the land and it will have to be returned by the new owners. An individual family living inside a kinship enclave, especially in case of the ‘village of origin’ cannot sell their land as they please. If they want to sell land and house, they have to offer it first to their brothers/cousins/relatives, and they will most likely buy it for a price they can pay. If no one of the relatives wants to buy this piece of land, the family has to offer it to non-kin neighbors (if any present there). Only then they can sell it to an outsider. Because of these nuances, Ingush are very careful, when buying land.

The organic kinship enclaves will protect their territory. If someone comes and tries to create problems there (initiate a dispute or a fight), he would be quickly ousted. “If he tried to sort things out on a neutral territory- this is another matter. But “coming to us” and “making a hassle here”, would be taken as disrespect of this family. Every guy down to the last idiot will jump out and protect the familial honor.” – explained Albert from Nazran.

Such rules apply only to land in rural and particularly familial settlements in Ingushetia. Buying a house in cities or in new settlements or outside organic family units does not entail any
obligations to kinsmen. The main thing is not to encroach on patriarchal nests, which are, indeed, tight social organisms.

Some kinship enclaves especially in patriarchal nests try to maintain discipline and order inside the kinship community.

How much can familia discipline its members? It depends on the men in that family. We are about 50 households of my fifth forefather Toach. We all live in a compact manner. We do have an influence and today we can proudly say that we have no single drunkard or drug addict or extremist or otherwise sinful people. Everybody is working, cultivating land. Our past helps us today, we try not to stain the good memory of our forefathers, Mussa Aushev, director of House of Folk Art, Surkhaki village, Ingushetia

In Chechnya in many settlements there are many representatives of one teip. However, Chechen settlements are more mixed compared to Ingush, in many bigger villages there will reside representatives of 30-40 different teips, and they do not live in a compact fashion, but in constellations of kin groups, occupying one/two streets next to each other. In Chechnya maintaining close kinship with further than third cousins is rare, even in the villages of origin:

These days we become distant with each other very quickly. With our cousins we have close kinship, but our children will know that they have such relatives, myakhchoy /second cousins/ but they would not know each other anymore. Now time flies very fast, everybody is scattered around, as a result of deportation and recent wars. I know many stories when young people started dating each other and then found out that they were relatives. They had to break-up. Rovzan Khadzhieva, 38, Zumsoy, Chechnya

The last two wars have dispersed extended and nuclear families further:

What has this war done?! One of my daughters is in Moscow, another- in Belorussia, the third is in Baku, another son and a daughter are in Istanbul, my nephews are in New York, Canada and Iceland! My family has fallen apart! bitterly exclaimed a senior from a mountainous village of in Shatoy district of Chechnya.

As a result of wars kin ties were broken. Everyone fled where they could. Wherever they had relatives, acquaintances, where the roads were open for traffic. Everyone got dispersed- tents, refugee camps, little communication. Khussain Akhmadov, Chair of Chechen parliament 1992-1993

4.3.4. Kinship and Blood Feud
I have dealt with blood feud in the section on teip, where I identified the role of descent group in helping extended families to revenge for the dear ones. Previously blood feud has been the
function of the entire teip. Today, blood feud still falls strictly in the domain of patrilineal relatives, but as has been mentioned in the previous section, teip/lineage only “supports” families in performing blood feud, but the responsibility to kill lies on immediate blood relatives.

*Brothers, cousins will revenge. It hardly ever comes to the second cousins. In exceptional cases, vovtkhar /third cousins – E.S./ can revenge, because the prestige of the teip is always on the agenda.* Vakha Garsaev, Chechen ethnologist

If for some reason close kin cannot perform blood feud in some point in time, it will not be taken up by more distant relatives, but will be transferred to the next generations of immediate kin of the killed:

“I will revenge for my brother, if I don’t- our sons will when they grow, if they don’t – our grandchildren will. I am not forgiving the blood of my brother”- said Zurab Tetchoev, whose brother was abducted and disappeared in Ingushetia.

If children of the killed person are still small, relatives can sometimes wait with the decision to announce blood feud or not, until the kids are in the position to make a decision, because it is thought that they have the primary right to do so. Thus, if impossible to perform right away, vendetta responsibility travels not horizontally (from immediate to more distant members of the descent group), but rather vertically, down to the direct offspring. This signifies that the last functioning mechanism of descent group cohesion is deteriorating and travelling into the domain of the extended family.

This section has summarized the results of my research which show that kinship on the patrilineal, matrilineal sides and through marriage constitutes a vital structure of Chechen and Ingush societies: daily routines, support in good and bad events (wedding and funerals), strong social solidarity and mutual responsibility, blood feud and social security fall in the domain of extended families. Where kin groups live in a compact fashion, they represent very tight and organic units, in the towns, the intensity of kinship relations is much weaker.

4.4. Territory

Historically most of Chechen teips used to be united into 9 *tukhums* – military-territorial units. Tukhum is a Turkic word, borrowed by the Chechen language. Tukhums are non-existent at the
moment, but their former contours coincide with cultural, regional, linguistic variations among Chechens. Thus, *Akki*-is a tukhum of Chechens primarily residing in Dagestan and culturally closer to Dagestan. *Ortkhoy* and *melkhi* tukhums are geographically close to Ingushetia and speak a language which is a mix of Chechen and Ingush. In the Soviet times, some of them stated in their passports that they were Chechens, others- Ingush. *Nokkheimakhoy* tukhum is considered to be the nucleus of Chechen nation, the embodiment of “Chechenness” and comprises 30 teips residing beyond Argun river. *Nadterechny*, *Naursky* and *Shelkovskoj* regions are traditionally leaning towards Russia.

Village affiliation is rather strong, particularly in Chechnya, where villages are less fragmented into kin enclaves. Vajnakh towns, especially the half million Grozny as any urban centers are socially different from rural areas.

But even Vainakh towns are divided into smaller sectors, micro-districts - *kuyans*, comprised of several streets or small residential areas. The residents of *kuyan* usually know each other by name, and maintain intense neighborly relations. “A good neighbor is closer than a relative”, claims a Vajnakh saying. Indeed, neighborly solidarity is very strong, self-help in household, maintaining infrastructure, water/gas/electricity supply, child care, cooking for holidays or funerals are important, especially since some of the above mentioned services are poorly provided by the state and catering agencies are no-existent.

Earlier I analyzed an incident of teip solidarity in Ingushetia, when in response to illegal actions of state agents, kin group managed to organize serious resistance. In Chechnya, such protests were a routine practice in 2000-2003 but were organized on the village-basis as a response to actions of the military servicemen, who en masse abducted young men, many of whom subsequently disappeared. Co-villagers would block roads and demand the release of young men. Many young people were saved due to these efforts. Never did such protests take up kinship contours in Chechnya. In Chechnya during the aerial attacks, neighbors spent weeks together in cellars, the entire residential blocks.
There is a widespread belief that certain Chechen towns and villages took independent positions on the turbulent political events of the 1990s. Thus, the town of Urus-Martan and Nadjterechny region were thought to be oppositional to separatist regime of Dzhokhar Dudaev before the 1st war, while the same Urus-Martan is thought to have been the center of fundamentalism in Maskhadov times. The subsequent chapters will scrutinize these political processes in settlements and explain their special/ or allegedly special political standing. Here I will take a note that regionalism and territorial affiliation are certainly relevant in Chechnya.

Historically Ingush teips sprang into five-six societies, however, currently historical societies have no social or political relevance in contemporary Ingushetia. Ingush have culturally and politically relevant distinction between Ingush who used to live Grozny (groznenskie ingushi), Ingush from Prigorodny Region of North Ossetia (prigorodnye ingushi) and the indigenous Ingush, often called Nazran Ingush. All these three types of Ingush are currently residing in Ingushetia, the first two groups arrived there as refugees, fleeing Chechen wars and the Ingush-Ossetian conflict and are considered to be more “advanced”: educated, urban, but also Russified, uprooted, lacking understanding of the “Ingushness”. Vices and problems of modern Ingush society, such as low morality are often blamed on these in-coming Ingush. Indeed, on the average having higher cultural capital, Grozny and Prigorodny Ingush took jobs and had more successful careers than their local co-ethnics, which created resentment, especially among the indigenous cultural elite. The first two Ingush Presidents were from Grozny, the incumbent president Yunus-Bek Evkurov is a Prigorodny Ingush. This fact incites tremendous dissatisfaction of the Ingush nationalist elite, who look forward to finally having a ‘real Ingush’, who “knows the Ingush ways” to rule the republic.

4.5. Religion

In what follows I will analyze the role of religion as a pattern of integration and religious institutions in contemporary Ingushetia and Chechnya. Since mid 1990s religion occupies an increasingly prominent place in the social life of Chechen and Ingush societies.
4.5.1. Tariqas and virds
As has been noted in the previous chapters, Soviet anti-religious campaigns were not too successful among Vajnakhs, and especially seniors continued to pray, fast, get together in murid groups for collective performance of zikr. Two Sufi tariqas are represented in the republics of Ingushetia and Chechnya, Qadyriya and Naqshbandiya, with the followers of Qadiri tariqa making up roughly 80% of all Vajnakh believers, 10% - Naqshbandiya tariqa and 10% to other very small virds.

The most numerous Qadyriya vird is Kunta-Khadzi, the followers of Kunta-Khadzi Kishiev, who introduced Qadyri tariqa in Chechnya after the Caucasian War. The Kunta-Khadzi vird has sub-virds, which sprang from it at a later point; the last one, the vird of Vis-Khadzi was founded already in Kazakhstan. The Naqshbandi tariqa also has a number of sub-virds, including some very small ones. There are 32 virds in Ingushetia and Chechnya, most of which are Naqshbandi; Qadiri tariqa is less fragmented.

In the Russian academic literature there is a widespread opinion, that the followers of Qadyri Kunta Khadzi vird in Chechnya are mostly mountaineers and that they are traditionally more anti-Russian, while lowland people are mostly Naqshbandi and they are pro-Russian. “…The religious factor played an important role in the fate of the current regime in Chechnya. Although it has never been pronounced openly, in fact it happened that the mountaineers (Qadyri tariqa) supported Dudaev, while the residents of lowland regions and intelligentsia (the majority of them- Naqshbandi tariqa) moved to opposition” (Kulchik 1994).

My interviews with experts and fieldwork in villages did not support this claim. “Virds are not divided according to geographical areas, even in many families there are vird divisions. Moreover, there is no connection between vird and politics. Separatist idea was an ideology which cross-cut religious and regional divisions.” Khussain Akhmadov, Chair of Chechen Parliament in 1992-1994, currently advisor to Mufti of Chechnya.

My fieldwork in villages confirms that there are numerous Naqshbandi followers in the mountains, especially in the region which fought in the Caucasian War on the side of Imam Shamil and adopted his vird at that time. They usually preserve the original vird of their forefathers.
The differences between the *tariqa* and *virds* are slight, and are mostly linked to performance of *zikr* - ritual dance and ceremonies during funerals. Oftentimes, in one family a wife could be of one vird and her husband of another. Fatima Bekova, who is a Qadyri Kunta-Khadzi follower, and her husband is Naqshbandi, explained the difference between the two in the following way:

“We /Qadiri Kunta-Khadzi vird- E.S./ will spend our last kopejk to make a dignified funeral. We spend a lot of rituals. When we buried our mother, we spent all our savings. For three days we serve lavish food and we give people little packages with food to eat for the soul of our deceased. We make it very tasty, from the bottom of our heart, because this is done for our deceased loved one. For three days our men perform zikr. And my husband’s vird /Naqshbandi - E.S./, they do not eat during funerals and do not do zikr. Their funerals are very quiet and inexpensive. On the seventh day they make a modest dinner and only the closest relatives come. Everyone brings what they can to contribute… I have no problem with us being different with my husband. I told him when I die, I want them to bury me according to their tariqa,since I do not want my family to spend much on my funeral.” Fatima Bekova, Nazran, Ingushetia

Despite insignificant differences in substance, vird-based integration and fragmentation are quite relevant in Ingushetia and Chechnya. The most tightly integrated is Batl-Khadz vird, Qadiri tariqa, the followers of Sheikh Batal-Khadzi Belkharoev (1821-1914). This vird does not recognize teip divisions, they marry only inside the vird, have a monetary fund, which supports its members, and control key economic objects in Ingushetia (central market in Nazran, gasoline stations, former plant Elektropribor). There are lots of myths and prejudices about this group in the Ingush community, linked with their allegedly criminal nature and masterful skills of lobbying their political interests. There is a full consensus that Batl-Khadz vird is the most politically organized and disciplined vird of all.

The second most integrated *vird* is Naqshbandi vird of followers of Sheikh Deni Arsanov (1951-1917). This vird occupies prominent positions both in Ingushetia and in Chechnya, and it is thought that any political leader in both republics should count with the opinion of this vird’s leaders. The solidarity of its vird members is also rather strong.

The least integrated is the most numerous vird of Kunta-Khadzi Kishiev followers. They constitute about 80% of the Chechen and Ingush population, and are pretty evenly spread among most of teips.
The religious fragmentation displays itself in the fact that in many settlements there are separate mosques of followers of different virds, in the existence of prejudices and stereotypes about virds with pejorative nicknames attached to each. Forums at Vajnakh internet portals are full of squabbles between different vird members.

4.5.2. Murid Groups and Local Religious Authorities
In Chechen and Ingush villages believers form murid groups, which meet up together for performance of religious rituals. Village murid groups are cells of larger religious structures (virds), which are part of still larger tariqas. The solidarity of village murid groups is strong, according to many.

“My house was destroyed during this war, the tank shell fell on the roof, I was injured and spent about a month in the local hospital. At that time my whole family was in Ingushetia in a refugee camp. So murids got together, bought construction materials and made a new roof. This way the remains of the house were saved, and later we were able to rebuild it,” said Maskhud Musakhadziev, Samashki village, Chechnya.

Each settlement has a central mosque, and in big settlements there will be several other smaller mosques, one in each neighborhood. The central mosque is visited on Fridays, while other prayers are performed in the mosque nearby. In Ingushetia, a segment of familia may have their own mosque. Thus, in the village of Achaluki there are 7 mosques, six for each major familias living there (Chapanovs, Bekovs, Gagievs (2 mosques), Shadizovs and Aushevs) and one central mosque. There is one Imam in the village (Chapanov) and he is responsible for leading the prayers in the central mosque.

Each village also elects a tamada, who is responsible for organizing religious rituals. In bigger settlements tamada has assistants called turks, one for each neighborhood. Thus, in a Chechen village of Gekhi-chu there is one Imam, one tamada and 6 turks, one for each neighborhood. In case something happens (eg. a funeral); turks inform everybody or call for help. Tamada organizes the rituals and coordinates the necessary support to the family. The work of all religious authorities in a village is voluntary.
Imam, tamada and turk have taken up the responsibilities of the old councils of Elders: “Now we do not have Councils of Elders. If anything happens, we turn to respected people: mullah or turk, they come and solve problems,” said Salavat Gaev, a senior from Gekhi-chu. There is no Council of Elders in a big village of Samashki: “Now we have Imam, everybody listens to him. We decided not to elect the council”, - explained Maskhud Musakhadziev. Many of the community problems are solved after Friday prayers in mosques. The head of administration of the village of Zamaj-Yurt in Chechnya said that there are few seniors remaining in the village, that is why Imam took up most of their functions.

We do not have a Council of Elders, but if I need to discuss issues with the community I can do it in the mosque on Friday, during Ruzban. I gather people outside the mosque (in the mosque you are not allowed to solve worldly problems) and raise the question. Usually almost everybody comes to Friday prayers. So I discuss things with everybody. And later I can formalize it on paper as a ‘meeting with residents’. The Councils of Elders have transformed into this..”. Ruslan Tsokuev, head of administration of village of Zamaj-yurt.

Maskhud Musakhadziev has been a tamada of Samashki village for 22 years. As a tamada he was involved in many negotiations with the military during the wars and civic administration on behalf of the population. The head of the village administration often asked him to talk to the residents, when sensitive issues had to be solved:

“In the beginning of this war the military servicemen based nearby demanded that we handed in one gun, because allegedly someone from our village did not handle it in. The head of administration called me and said: “Talk to people, ask them to collect money, we need to buy this gun and give it to them, otherwise they won’t leave our village alone. They will listen to you”. I said: “We will raise money now, will buy a gun and in two months another regiment comes here and they will again demand that we hand in weapon. He said may be the situation would change for better. Indeed, that was a dangerous time. So, I sent my murids to collect money street by street. I told my murids to make a precise list of each contribution with signatures. I still have this list here. Then I brought the money to the head of administration and made him write a receipt that he got it. I insisted that we make a footage of how we hand this gun in and get an official statement from the military that they received it. I did it in case the military men changed and the next ones also wanted to make business on us.” Musukhadziev Makhud, Samashki, Chechnya

Thus, in the conditions of non-elective local governments, religious authorities in the villages take up some of their function and act as people’s representatives in dealings with administrations and the military. Ruzban (Friday prayer) is used for solving issues of public
relevance, Imams and their assistants have replaced teip-based Councils of Elders in every village where I have done fieldwork. Quite a few of my respondents said that vird affiliation is as important or even more important for them than their teip.

4.5.3. Fundamentalists
Murid groups are not the only patterns of religious integration in Vajnakh societies. Since mid 1990s new fundamentalist movements started to spread in the North Caucasus, which went into open uncompromised opposition against the traditional virds. Fundamentalists called for the “return to the origins of Islam”, spoke against elements of paganism in Sufi tariqas. Fundamentalists strongly opposed adoration of saints and pilgrimage to their tombs, which according to them contradicted the main principle of Islam- *tawhid* (Oneness of God), consider *zikr* (ritual dance) as an innovation, they called for simplification of expensive religious rituals (funerals, weddings), strict observance of all the duties, which the *Qur’an* stipulated. They are against teip, vird and national distinctions as fragmenting the Muslim umma. Virds indeed are based on adoration of their leaders, who are attributed supernatural capacities (to fly to Mekka in five minutes and get back, to come out of chimney as smoke, to disappear, to stop an airplane in the air so that pilots can fix it, etc). Koranic Islam forbids mystifications and adoration of anything except for Allah. According to experts, many young people are moving away from the traditional virds. “*Young people do not believe in these fairy tales anymore. The virds have strengthened in deportation, when people needed to believe in miracles, but now we have 100% literate population. Youth is moving away from them*”, said an Ingush ethnologist. However, fundamentalism is persecuted by the authorities in the North Caucasus, especially in Chechnya, and people who openly deny *tariqas* can become victims of arbitrary detention, murder or disappearance. Some young people nonetheless risk prosecution and gather in separate places to follow their own fundamentalist breed of Islam. These are usually quite aggressively opposed to tariqa. In Ingushetia there is a bit more space for freedom of religion, although
security services have lists of fundamentalists from every district and monitor them and regularly invite them for “talks” or arrest them. These are tightly integrated, almost underground communities usually of young people, for whom fundamental Islam is a protest subculture. Young people who belong to this trend in Islam tend to more often join combatants than the tariqa followers.

Still others, try to stay in between, not to join fundamentalist networks and not to participate in traditional tariqa rituals (zikr, mold) and prefer to do prayers at home.

Thus, religion is a very important factor of both integration and fragmentation within the Chechen and Ingush communities, which are divided into two tariqas and fundamentalists. Tariqas are in their turn fragmented into 32 virds, some of which (eg. Batl-Khadzi Vird and Deni Arsanov K’ala Vird) are very tightly integrated. Religious authorities play an increasingly important role in the villages often substituting or complementing local governments. Murid groups are a prominent source of solidarity, so are fundamentalist networks.

4.6. Mechanisms of recruitment to office and getting access to social goods

In the previous sections I have analyzed stable social structures in Chechen and Ingush societies or what has remained of some of them. As part of my fieldwork I carried out over 40 interviews with professionally and politically active members of Chechen/Ingush societies. Each of these respondents I asked questions of about dominant mechanisms of recruitment to office. Most respondents replied that the predominant channels of recruitment were through 1) relatives 2) neighbors 3) personal networks of (friends, vird members, acquaintances from mosques/praying group, class-mates, former co-workers, ideological comrades). Respondents attributed different weight to each of these categories, depending on their personal outlook, level of education, urban/rural residence, occupation.

4.6.1. Kinship and descent
Among the primary channels of acquiring access to jobs/social goods are still relatives on either side or through marriage (more rarely members of familia in Ingushetia). Most of the respondents either actually found their jobs through the relatives or thought this was the way to look for employment.

Many respondents thought that helping relatives to find employment was morally tolerable and practically efficient. “Chechens have this understanding that if you have strengthened your position in life, you should help your relatives”, said one of my respondents of a high political profile.

If it had not been for family solidarity, many would have died. If a teip member becomes the head of an enterprise, soon his relatives will appear there, up to a night watchman. A relative will not sell you, betray your interests, and if he steals, well, it is better if one of your guys steals than a stranger. Israil Murtazov, teacher of history, Sernovodsk agricultural college, Chechnya.

Other more urbanized and educated respondents who have made successful careers claimed that their contacts with relatives are very limited.

In my personal network relatives occupy less than one percent. I used to turn to my brothers and cousins in the past. Now I don’t, even if I need money. I rather turn to friends. I have one friend of the same familia, but it’s not because he is a relative, it because he is a writer and we are close spiritually. I have my own circle. I will only turn to relatives when I need to perform wedding rituals for my children’s marriages, Nurdin Kodzoev, Ingush historian.

Some of the respondents noted that in the late years of socialism, when unemployment was high but less dramatic, family channels of office recruitment were not as prominent. When economic crisis became very acute, family solidarity increased, together with kin-based nepotism. In addition, in the conditions of highly militarized and criminalized business and politics, many families thought it to be more secure if relatives “went into” the jobs together. Especially true this was for the governmental positions and law enforcement in Chechnya:

“To secure our family, we had to send one brother to work for the government. Soon we realized that it was difficult for him to be there alone, so the second brother had to join him”, - Zura, aged 53, explained their family choice.

In Chechnya in the conditions of sharp cleavages and warfare, securing employment in one of the government or pro-government agencies has for many families been a strategy aimed to
ensure the protection of their extended family. Thus, kinship is not only an affective tie but a resource used for strengthening families, risk reduction and securing employment.

4.6.2. Neighbors/ Zemlyaks
Together with families, all respondents mentioned neighbors, members of local communities and other territorial ties as an important part of their social network, which could help access jobs. Particularly this was relevant in respect of Chechnya under Kadyrov, who surrounded himself by his co-villages from Khosi-Yurt. Jokes about nepotism of the current regime are numerous: “In Khosi-Yurt every shepherd has become a minister”.

Neighbors and co-villages, regional connections constitute a prominent part of a person’s social capital.

4.6.3. Religion
Another stratum of members of social network named by the respondents as important (mostly in Ingushetia) was vird, or Islamic brotherhood, acquaintances through mosque or praying group (especially relevant for fundamentalists). As has been noted earlier, the most tightly integrated virds, which express solidarity in employment and lobbying their political interests are the Qadyri Batl-Khadzi Vird and the Naqshbandi Vird of Deni Arsanov.

Fundamentalists represent a marginalized closed network based on strong self-help and solidarity. Since it is very difficult for a fundamentalist to get employed in state agencies or government controlled institutions, they often work at construction sites helping each other to get access to employment.

4.6.4. Professional networks, ideological networks and others
But most important role in the personal networks of professionally active individuals have been professional contacts, colleagues from the previous or current employment and other contacts, such as friends and acquaintances. Many respondents maintained close relations with their
secondary school mates and university friends. If people studied outside the republic at higher schools, this friendship often lasted for the lifetime, because it was tempered in many risky adventures. People maintained close contacts with their ideological comrades (nomenklatura, members of national movements from the late 1980s), Chechen separatists (those who still cherish the idea) also maintain a loose, hardly visible network.

Conclusion
This chapter analyzed the main patterns of social integration in contemporary Ingushetia and Chechnya, based on many interviews and five years long participant observation in the region. The detailed analysis of informal social structures in this chapter aims to provide a link between macro (elite) micro (community) - levels of analysis of social and political integration by carefully scrutinizing these structures, their functions, how they are being maintained, the essence of identity behind them and mechanisms of identity reproduction.

I conclude that teip (clan) ceased to exist as a social structure in contemporary Vajnakh societies, mechanisms for maintaining cohesion of Vajnakh teip are lost (except for small teips in Ingushetia), teip remains a loose identity, to which different people attach different significance (it tends to be stronger with ethnocentric men and traditionalists). Descent groups have decomposed into lineages and territorial segments of teips and lineages, which also have a very limited social role, mainly contained to performance of rituals and to “express solidarity” in rare cases of blood feud.

Daily routines of Chechen and Ingush individuals are to a greater extent shaped by close kin (patrilineal, matrilineal and affiliated through marriages). Vajnakh are very kinship rich societies, sheer numbers of close relatives due to high birthrates make kinship networks prominent in an individual’s life. Even blood feud, an institution which traditionally bound together the clans, has now travelled into the domain of the immediate kinship, or tsijnanakh, i.e. people of the same house. Vajnakh kinship has a strong biological connection. If a person was
integrated in a family (through adoption or otherwise), this will be always remembered and emphasized in particular circumstances. My fieldwork confirms the Gellnerian position that albeit acknowledging a certain degree of fiction, kinship is closely linked to biology. This goes against the theoretical proposition of clan literature that kin, territorial and friendship ties are a variation on the theme that can be classified under the rubric of ‘kinship’. At least Vajnakhs very strongly differentiate between kin and non-kin; each involving a different set of rights and obligations.

Religious structures become increasingly prominent in the life of Vajnakh communities, *murid* groups, virds or fundamentalist networks are important patterns of social integration, many claim more important than descent groups. Imams and religious authorities have replaced village Councils of Elders in all villages where I did my fieldwork. In the conditions of non-elected local government religious authorities were an important link which connected appointed administrators with the population.

Regional and town/village/neighborhood identities are also prominent, moreover, neighbors and co-villages are commonly considered almost as important. When kin groups settle in a compact manner, neighborhoods become very strongly integrated organic communities.

Part of my empirical research was uncovering mechanisms of access to jobs and social goods, for which interviews were carried out with professionals and politicians. Several mechanisms were identified by the respondents as most prominent:

1. Mechanisms of recruitment to office

   - descent (being the weakest), kinship, religion, territory, ideology, friendship/professional networks (being as important). I include friendship and professional networks into the category of ‘other’, and does not research friendship as a pattern of social integration, which is a prominent category, but it does not have
its own logic (you can be friend with someone for different reasons), moreover friendship has nothing to do with the socio-political structure of the society - as opposed to other patterns of integration identified above. Thus, this chapter has proven that kin structures are prominent, but in no way dominant in shaping the social processes in Ingushetia and Chechnya.

This chapter will analyze the 1991-1994 nationalist state-building project in Chechnya, the main forces and factors shaping political process, the social make-up of the political agency, the government policies aimed at building the state and the reasons of their failure or success. It will explore the role of teips, kinship and other patterns of social integration in state-building and public life in the given period.

The analysis of this chapter shows that the political process in 1991-1994 was secular, ideologically and economically driven, the challengers of the regime were represented by civic organizations and movements, that had no links to traditional structures, informal patterns of social integration or religious groups.

I start by describing the socio-political context which preceded the regime change, namely the emergence of mass political protest which transformed into a separatist movement, and resulted in a National Revolution. This section is important for understanding the political agency, state-building dilemmas and challenges. The second section will analyze the state building project itself, with a focus on the function of the newly created institutions and the state’s capacity to deliver social goods. The principal areas to be investigated are: budget and tax collection, industry, education and healthcare, law enforcement, armed forces, judicial system, infrastructure and welfare. While analyzing the state-building I will scrutinize the driving forces behind it, the agency involved and show that the role of teips/traditional institutions in the political process was nil. The third bloc will discuss the political crisis between the executive and legislative branches of power, which virtually paralyzed the Chechen political system by 1993 and the outcomes of this
crisis. It will show that the crisis had nothing to do with the struggle between descent groups and had no kinship element to it. It will also discuss how the system of checks and balances coupled with the strong opposition controlled for nepotism in the Chechen government. The fourth section will analyze interaction of the state and informal patterns of social integration, the attempts to revive and politicize teips and the traditional institution of Mekhk-Khel in Chechnya in 1991-1994. Finally, I will deal with the phenomenon of regional political opposition to the separatist project of Dudaev and the challenge of armed groups based in these oppositionist regions. I will argue that patterns of social integration, pre-existing Dudaev regime (descent groups, tariqas, virds) were accommodative or supportive of the government, while the challengers were organized along ideology and regional affiliation.

5.1. Socio-Political Processes Preceding State-Building: Nationalist Movement and National Revolution

Protest politics in Checheno-Ingushetia started - as in many regions of the USSR – from ecological movements. Environmental protests against construction of biochemical factory in the town of Gudermes were overtaken by nationalist slogans. The Peoples’ Front of Chechen-Ingush Republic was formed, which was the avant-garde of the opposition until 1990. In 1988-1990 a number of other “informal” organizations emerged which organized public discussions on national history and some of them (eg. organization “Bart” - Unity) went further and demanded to transform the Chechen-Ingush Autonomous Republic into a full Republic of the USSR (Gakaev 1999).

The appointment of Doku Zavgayev the 1st Secretary of the Republican Communist Party was widely perceived as the victory of the democratic movement in June 1989. It was the first time in history of the Soviet regime in ChIASSR that a Russian communist functioneer Semenov, proposed by the Central Committee of the Communist Party was outvoted, and an ethnic
Chechen took the lead of the republican party. This event was widely celebrated by Chechens, animals sacrifices made to his success. (Gakaev 1999, Tishkov 2001)

Zavgayev’ rule brought a significant liberalization of the regime. Being a moderate nationalist he finally allowed the sensitive issues of Chechen history into the official press. It caused an unprecedented raise in the awareness of past grievances and an intensification of the shared sense of historical injustice.

Protest sentiments were gaining force and in February-March 1990 seven regional party bosses and a number of other party officials were replaced under the pressure of the People’s Front. What started as anti-corruption and anti-communist protests was quick to developed first in the direction of nationalism and then of separatism. In May 1990 Vajnakh Democratic party was founded which set as its main goal “the creation of an independent democratic state”. In the summer of 1990 the Vajnakh Democratic party together with a number of leading Chechen intellectuals initiated the Chechen National Congress, where a Soviet air force major general in Estonia and an ethnic Chechen, Dzhokhar Dudaev, made a passionate speech and impressed all delegates with his strength of character and decisiveness (Dunlop 1998:93). On December l 1990, Dudaev, then still serving in Tartu, was elected a chairman of the ispolkom [executive committee] of the Congress.

On June 30, 1990 three alternative drafts of the Chechen Declaration of Independence were published in the “Groznensky rabochij”, which suggested three versions for Chechen independence: the first, proposed by the republic’s Supreme Soviet declared Checheno – Ingushetia an independent state within the Russian Federation and the Soviet Union, the second, proposed by the Vajnakh Democratic Party – a sovereign Vajnakh Republic, the third-by the Chechen National Congress -The Independent Chechen Republic of Ichkeria (Groznenskii Rabochii 30 June 1990).

Emergence of modern nationalism with formal political programs, transformed the Chechens from an ethnos, an ethnocentric community focused on the past, into a modern political nation, projected into the future. As events unfolded towards separatism the national ideologues further
politcized the ‘memories of grievance’ and employed the security argument to garner support for the idea of full independence from Russia. Social protesters, most of whom were born in exile and were unemployed in their national republic supported the opinion that Russia had historically inflicted a great deal of suffering on Chechnya and that in order to prevent a repeated ethnocide it had to establish its own nation-state. On November, 26 1990 the Supreme Soviet of the Republic Declared The Independent State of Checheno – Ingush Republic. In reaction, the Chechen National Congress declared the Independent Chechen Republic Nokhchi-cho (Groznenskii Rabochii 30 June 1990).

The turning point was the failure of the putsch against Gorbachev in Moscow, on 22 August 1991. Doku Zavgaev failed to take a firm stance against the putsch, this way discredited moderate republican nationalists. Thousands of people gathered downtown Grozny and demanded the resignation of the republican government.

On 6 September the protesters stormed the building of the republican administration, Zavgaev had to resign, and Dzhokhar Dudaev, now the leader of the National Congress, was declared the President of the sovereign Chechen Republic. This event came to be known either as the ‘Chechen National Revolution’ or as ‘Dudaev’s coup d’état’.

When the putsch broke out the republican authorities were disoriented. They supported the putchists and people learnt about it. The National Congress on the contrary knew what to do. They spoke against the putsch and supported Gorbachev and took a lead in the protest. The demonstration was massive- at least 100,000 people standing by the Palace of Culture. And this human mass was ruled by Dudaev, they did not recognize anyone accept for him. Khussain Akhmadov, Chair of Temporary Supreme Council, 1991 (Provisional government), Deputy Chair of the Executive Committee of the National Congress of the Chechen People (OKChN).

On October 27, 1991 the parliamentary and presidential elections took place in which most Russians and Ingush did not participate and there were numerous other “irregularities”, but Chechens voted and according to the official Chechen statistics Dzhokhar Dudaev received 85% of the Chechen votes (Dunlop 1998, Tishkov 2001, Gakaev 1999).

Thus, in 1991 the tide of social protest in Chechено - Ingushetia brought at its crest the nationalist slogan of political independence of Chechens, i.e. the demand of congruence of the
Chechen national and political units. In Gellner’s definition Chechens became a modern nation. The amorphic pre-modern national feeling was now in Oakshott’s expression “abridged” and presented as a simplified platform for collective deeds. The past granted the future of the Chechen nation with a set of conditioned reflexes which were not deterministic but crucial in shaping the possible range of further trajectories and behavioral patterns. Following Anthony Smith, one could argue that the Chechen modern political nation incorporated many of features of its pre-modern ethnie and it owes a lot to its general mode of ethnicity (Smith 1986:18). This mode of ethnicity was shaped by the three types of memories analyzed in the previous chapter, which alongside with memories of grievances, contained a very prominent element of memories of success, development and positive coexistence of nations.

It is for this reasons that separatism did not establish itself fully until the breakout of the war. A significant part of the national movement considered that Chechnya should have a national polity with an extensive autonomy within the Russian federal state or in a union with Russia. Among these were many intellectuals, academics, members of the ex-nomenklatura, part of the economic class and students.

*My family was against full independence and so were most of the intellectuals [intelligentsia]. Many of us received our degrees in Russia. We maintained academic links. We were against radical nationalism and xenophobia the way it flourished under Dudaev.* Tamara, 41, Pedagogical Institute lecturer, Grozny

*I have never supported independence. I thought you can not build sovereignty on pure enthusiasm. [I thought] that we had no economic, social, political preconditions for a functioning independent state.* Zura, 31, journalist, Grozny.

Supporters of Dudaev, however, found these intellectuals assimilated, alienated from the Chechen society and not representative of its interests:

*In 1976 my family returned to Chechnya from Kazakhstan. Religion was under pressure; language was under pressure, no programs on TV in the native language, the 1st Secretary [of the Communist Party- E.S.] was Russian, the second-Ingush. No work for indigenous population. Ingush occupied all the lucrative positions, Russians had specialists’ jobs. And Chechens had to sweat on seasonal jobs outside the republic. The elite could not put two Chechen words together and were following only their mercenary interests... When Dzhokhar came, it all changed. It was a blissful time. I can’t remember him without tears. He was a star, an ideal, a meteor, which visited the earth and burnt down. Such people are born once in a thousand years. He was a romantic, a pure, conscientious soul. For romantic people he was everything. There’s a saying*
that revolutions are made by romantics, but their fruit is used by scum. That’s exactly about us. I elected Dzhokhar that day, and since then I have never casted my vote for anyone. X, 1953 Gikalo village, Chechnya

For me Dzhokhar was an ideal. First time when I heard him at a rally, when I listened to elders, about the suffering they had to undergo, I understood that he was right. He wanted freedom. He did not want it repeated - the 19th century, the 20th century, the 1944- just one big pogrom of the Chechen people, Khozh, a former Chechen combatant

Dzhokhar Dudaev, the public support he enjoyed notwithstanding, was aware of the ideological differences about the future of the Chechen national polity among his co-ethnics. He also realized that Chechnya was a multi-ethnic republic, and that his separatist project did not appeal to Russians, Ingush and other minorities. This is probably the main reason why no referendum on the status of the Chechen republic had ever taken place.

In his classic States, War and Capitalism Michael Mann defined the state as containing four major elements: “(1) A differentiated set of institutions and personnel embodying (2) centrality in the sense that political relations radiate outwards from a center to cover (3) a territorially demarcated area over which it exercises (4) a monopoly of authoritative binding rule-making, backed up by a monopoly of the means of violence» (Mann 1992:4). Unlike many previous writers who tended to directly or indirectly equate the state with the military power (Eisenstadt 1969, Weber 1968, Rustov 1982), Mann emphasized that the emergence of state and its maintenance are determined by two ‘types’ or two ‘meanings’ of state power. Those are the despotic and the infrastructural powers of the state. Although in modern times, the despotic power of the state is still present (in the form of a wide range of actions that a state can undertake without “the routine, institutionalized negotiation with the civil society), the infrastructural power is becoming increasingly more efficient (Mann 1992:5). The infrastructural power, according to Mann, is “the capacity of the state to penetrate the civil society” (by subsistence: employment, welfare; means of communication, information maintenance), and “implement
logistically political decisions throughout the realm” (Mann 1992:6, 7). The dependence of the state on its infrastructural power is enormous in the modern times (Mann 1992:6).

In 1991 all the ingredients of Michael Mann’s state power were absent in Chechnya. This was a republic lacking in tradition of modern secular statehood, in its own infrastructure, or even in historic experience of its own ‘despotic’ power (Imam Shamil initiated his state from Dagestan). It had no precisely demarcated area to which it extended its power. Until 1992 it was even unclear whether Ingushetia still belonged to the state. There was no monopoly on the physical violence or on binding rule making. On the other hand, in 1991 Chechnya still had the infrastructure of the Soviet Union: people were mostly employed in the state sector, the welfare system was rather comprehensive, the education and medical care were provided for by the state, the state owned railroads, maintained sewage systems and elevators, paid compensations for kids.

Establishing institutions went smooth: in 1991-92 all due Ministries, State departments and Security services were founded. All state property owned by the Russian Federation and the Soviet Union were nationalized. The 1992 Constitution guaranteed all citizens of the Chechen republic equal human, social, cultural and environmental rights. Islam was announced the state religion, while freedom of consciousness to others was guaranteed. The languages of state institutions and judicial system were Chechen and Russian. Men and women were acknowledged as equal in the face of law and family.

According to the 1992 Constitution the Chechen Republic was a parliamentary state. The Chechen parliament had very wide credentials, including approving all Ministers in the cabinet, appointment of the Chair of the Constitutional Court, Chair of Supreme Court, Prosecutor General, Chairs of Investigative Committee and National Defense Service and deputies, National bank, sanitary-epidemiological and ecological services, all Ambassadors, declaring war and

33 Constitution of the Chechen Republic Unit 2. Art 17-60
34 Ibid, Unit 1 article 4
35 Ibid.
emergency situations, approving the budget and initiating impeachment of President and referendum.\textsuperscript{36}

The President of the Chechen Republic was the chief executive and the general commander-in-arms. Any citizen not older than 65 years old, could be elected the chief executive by direct anonymous vote.\textsuperscript{37} The President could veto the laws passed by the Parliament, but the Parliament could outvote the veto by 2/3 of votes. The local government was to be elected and be independent of the government system\textsuperscript{38}. The Soviet judiciary system at the Republican, city and regional levels was to be preserved.\textsuperscript{39} An Ethnic Council was set up to represent the minorities in the Republic.

*There was no mention of traditional institutions and very little emphasis on religion in that first Constitution. All MPs had the Constitutions of the United States and of European countries on our desks. We produced many descent laws. We were oriented towards a European democratic model.* Khussain Akhmadov, Chair of the Chechen Parliament 1992-1993.

5.2.1 Budget and Tax collection
Economically the beginning of Dudaev’s rule was promising. After the economic siege was imposed on Chechnya by the Russian Federation on January 29 1991, Dzhokhar Dudaev ordered to stop all payments into the budget of the Russian Federation and transfer them into the budget of the Chechen Republic\textsuperscript{40}. All the revenues of the oil industry stayed in the republic, and on top of that Chechnya continued to receive financial transfers from the state budget, 9 billion rubles in 1992 only (Tishkov 1996:21). In 1992 the budget was formed 50% local taxes, 50% from the budget of the Russian Federation.

According to the “Information letter on control and check-up activity of the State Tax Police of the Chechen Republic”, the tax collection was quite efficient in 1992. The document states that in 1992, 6.9 bln. rubles were transferred to the budget and non-budget funds of the Republic, the police checked 10 659 out of all 40 701 taxpayers, a 10% increase since 1991 despite the fact

\textsuperscript{36} Ibid. Art.62-65
\textsuperscript{37} Ibid. Art.70
\textsuperscript{38} Ibid. Art.73
\textsuperscript{39} Ibid. Art.100
\textsuperscript{40} Order of the President of the Chechen Republic of January 29 1992
that three Ingush regions quit paying taxes into the budget of the Republic. 1,022 officials were fined.\footnote{Information letter by Head of Tax Police Alerkhanov V. to the Chair of Parliament of the Chechen Republic Soslambekov Yu, May 5, 1993.}

People did pay taxes, the inspectors were visiting businesses, collected all dues. I do not know what subsequently happened with this tax money, but it was collected. You should keep in mind that in the three years most of industry stopped functioning and it stopped paying taxes. Individual businesses paid. The tax service itself got funds from the Russian federal center and we received salaries until 1994. But the senior staff was changing every month. The main criterion was: what have you done for the revolution? In 1994 they created a separate department for markets, and appointed a new director. Our secretary showed me his employment record (trudovaya knizka). It said “shepherd”, then “senior shepherd”, then “senior state tax inspector”. But he was an active supporter of the revolution. Imran, Tax service inspector, Grozny

There is no hard data on tax evasion, however, obviously, a large sector of moonlit economy was outside the legal framework or tax police reach. The documents from the parliamentary archive testify that President Dudaev was trying to follow a flexible tax policy, to react to constrained economic conditions. For example, from January 1, 1992 he abolished 5% sales tax and 25% tax on “goods of high demand”.\footnote{Decree of the President of the Chechen Republic “On abolishing 5% sales tax on the territory of the Chechen Republic and 25% taxes from sale of goods of high demand ” of December 16, 1991}

5.2.2. Industry and Unemployment
During 1992-94 there took place a drastic decline in Chechnya’s industrial and agricultural production (Dunlop 1998:126). According to Goskomstat of Russia [official bureau of statistics], in 1992 the industrial decline in Chechen and Ingush Republics was 32% in 1992 (against 18.8 the Russia-wide average), 61.4% in 1993 (16.2 the Russia-wide average). The production of food products per person declined by 46% in Chechnya (Russia-wide 18%), the unemployment rose by 16% and in 1993 the number of temporarily laid off workers was over 16,000 people (Tishkov 1996:23). In 1992, according to the Russian economists Emil Pain and Arkadii Popov, there was a nearly 60% decline in oil industry, which, in their opinion, was directly connected with the mass outflow of Russian-language populace who had previously been the key qualified cadres of this industry (in Dunlop 1998:126).
In January 1992 when Russia liberalized prices on consumer goods, Dudaev kept control on key goods. Until July 1993 he insisted that bread cost the symbolic price of one ruble. This had catastrophic consequences for the Chechen economy, which remained in the ruble zone, as the small traders were buying goods in Chechnya and reselling them outside the republic (Gall and de Wall 1997:126).

5.2.3. Law Enforcement and Security Services
Taming lawlessness and criminality was an issue of vital concern to the Chechen authorities. In the time when the Chechen official economy suffered a drastic collapse, its shadow economy was thriving. At least 300 million dollars in profits from oil went to the Chechen government in this period, but never showed up in the state budget. Some estimates put the figure as high as one billion dollars (Lieven 1998:75).

To tame illegal export of oil and petroleum products from Chechnya Dudaev issued a decree, which obliged enterprises and organizations to dispatch strategic goods by railway transport only upon checking by customs service and getting the due permission\(^43\). The organizations were bound to provide monthly reports to the Cabinet of Ministers of the Chechen Republic and the custom’s service of the republic on the concluded agreements, deadlines and amounts of the dispatched goods.

Partly as a result of this decree contradictions emerged within the Presidential team in the summer of 1992 between the Vice-Premier, Yaragi Mamodaev, who was now supposed to oversee oil transactions on the one hand and the Minister of Internal Affairs, Sultan Albakov, on the other. The conflict was to a large extent over the control of oil industry and the sales of

\(^{43}\) Decree of the President of the Chechen Republic “On ordering the strategic goods beyond the Chechen Republic by railroad” of January 4, 1992
petroleum products. The “presidential” group took over; Mamodaev lost his ministerial post, while Dudaev ordered to report all oil transactions directly to him.

Oil transactions remained intransparent and the problem of theft of “strategic goods” was not efficiently solved. On October, 19 1992 in the Resolution of the Cabinet of Ministers of the Chechen Republic # 389, the situation in the sphere of safeguarding objects of oil and chemical industry and main oil pipes was characterized as “critical.” During the subsequent crisis in May 1993, the Constitutional Court of the Chechen Republic passed a resolution on compliance of actions and decisions of high officials of the state with the Constitution of the Chechen Republic.

In this statement the Constitutional Court ruled:

“...the material losses of the state from unreasonable and at times questionable realization of oil and oil products numbers tens of billions of rubles. By decision of government in the conditions of hard material circumstances of the population oil products were supplied according to questionable contracts, for which material valuables or payments have not been received until now. Moreover, oil products were supplied for understated prices abroad, where bank accounts in foreign currencies have been opened, which the top officials conceal from the public."

Oil was not the only currency of the shadow economy. In 1992 Chechen criminal groups skillfully exploited the ambiguous status of Chechnya to make the republic a center of the notorious bank frauds. By forging the so called avizo promissory notes of the Russian banking system, it was possible to get spurious documents in one part of the ex- Soviet Union and cash them in another part of the country for huge amounts of money; “...some Chechen avizovshchiki brought home literally lorry-loads of rubles». The Central Bank of Russia managed to stop this practice in summer 1992 only (Gall and de Waal 1997:131). As many observers have noted, few obstacles were created on the way of these criminal transactions from Russia. Moreover, according to Sergei Arutounov, an expert of the Institute of Ethnology in Moscow “certain

44 http://www.chechnya.ru/view_all.php?part=hist&offset=17

46 Zakluchenie Konstitutsionnogo suda Chechenskoj Respubliki “O sootvetstvii Konstitutsii Chechenskoj Respubliki dejstvij i reshenij visshih dolznostnih lits gosudarstva po ohrabe Konstitutsionnogo stroya, prav i svobod Respubliki”, (Resolution of the Constitutional Court of the Chechen Republic “On compliance to the Constitution of the Chechen republic of actions and decisions by high officials of the state, aimed at protection of the Constitutional order, rights and freedoms of the Republic”) May 18 1993
Russian corrupted civil and army circles and ‘mafiosi businessmen’ zealously exploited the de
facto free economic zone, which has been formed in Chechnya” (in Dunlop: 1998:132).

Criminality was not only at the level of organized crime, but also minor illegal economic
activity, illegal capture of previously state-owned state property, industrial equipment, transport,
taking over enterprises and using them for own good. On January 8, 1992 in his Decree,
President Dzhokhar Dudaev tried to return to the state the illegally captured administrative
buildings and premises but the Decree was not efficiently enforced.47

The situation of lawlessness was increased by mismanagement of prisons, generous amnesties,
and escape of prisoners from Preliminary detainment facility (SIZO) in Grozny and from
Naursky colony48. According to the statistics quoted by the Constitutional Court of the Chechen
Republic “The number of registered crimes in 1992 was 9,984, which was a 68% growth
compared to 1991. The total number of serious crimes increased by 94,6% (2,341 compared to
1,203) and a number of intentional murders by 80,6% (242 against 134), rapes by 37% (63
against 46), theft of state property by 234,3% (2,434 against 727), burglary and robberies by
275,4% (214 compared to 57)49.

Chechens were reluctant to resort to violence against Chechens, which made it difficult to cope
with particularly daring criminals and escaping prisoners. The enforcement of discipline and
order of Chechens by Chechens turned out objectively very difficult, given blood feud tradition.

Realizing this problem, Dzhokhar Dudaev issued a decree # 140 of November 1 1992 “On using
of weapon”, which allow “the personnel of Ministry of Defense, Service of National Defense,
military servicemen and other persons who guard state objects and public order to use weapon
against perpetrators, if it is otherwise not possible to stop their illegal actions”. Naturally no
decree could abolish blood feud.

47 Decree of Dzhokhar Dudaev “On illegal capture of administrative buildings and premises ” of January 8 1992
48 Prisoners escaped from SIZO of Grozny twice, in 1991 and in the January of 1993. 625 prisoners escaped from
the Naursky colony in 1991.
49 Resolution of the Constitutional Court May 18 1993 p.3
5.2.4. The Judicial System

In the Chechen Republic of 1991-1994 the functions of the Ministry of Justice were performed by the National Committee for Legal Reform with the President of the Republic. Starting January 13 1992, according to the Presidential Decree “On order of financing the National Committee for Legal Reform, agencies and institutions under its jurisdiction, people’s courts of the Chechen Republic”, the state stopped financing courts, notary agencies, civilian registration services. The National Committee for Legal Reform was supposed to receive the state duties levied by courts, notary agencies and civilian registry offices as well as fees for additional services and use them for equipment of institutions under its jurisdiction and paying salaries to their employees. Since levy collection was inefficient, the courts appeared to be severely underfunded.

Lack of funding and control seriously shattered the judicial system. There were numerous attempts by affected individuals and organizations to influence judicial decisions using money, connections or pressure. However, this pressure was not government sponsored but grass root. In his decree of January 8 1992, President Dudaev acknowledged that “there are numerous cases of citizens and officials evading invitations to come to judiciary and investigative agencies, resisting or creating obstacles to implementation of court decisions and verdicts” and ordered to strictly punish in accordance with law those who “prevented courts… from carrying out their duties”. The decree remained a declaration. According to the Resolution of the Constitutional Court of the Chechen Republic 1204 cases were transferred to the courts, which constituted 12% of all crimes registered in 1992, mostly on insignificant offenses, only 327 people had been sentenced to prison terms.\(^5^0\)

At the top level of the judiciary system informal interventions were less frequent, while the Constitutional Court tried to remain impartial between government and opposition until it was dissolved in 1993. In short, the most efficient part of the judicial system was the one which was

---

\(^{50}\) Ibid. p.4
most visible and subject to checks and balances, the more particularistic ones were the local courts.

5.2.6. The Military
Among successes of Dudaev’s state-building efforts was the creation of Armed Forces of the Chechen Republic. In the period of 1991-1992 the Chechen government managed to appropriate or buy, normally from the Russian military officials an immensely significant number of weapons, including military planes, helicopters, tanks, armed troops carriers, automatic weapons and handguns. Twice a year the Chechen Military Commissariat drafted young men to mandatory military service, the President created a unified system of state mobilization system of defense. Many observers who knew Dudaev insist that he was not personally corrupt, and that the dollars which came from the oil transactions were spent on arms for the national defense (Dunlop 1998, Gall and de Waal 1997, Tishkov 1996).

5.2.7. Education and Healthcare
Educational system and healthcare remained dramatically underfunded; teachers and doctors did not receive salaries for months, in some schools parents collected money to pay wages for teachers. On the positive side, a series of decrees of the President were able to prevent illegal privatization of property and material values in the sphere of education, healthcare and culture. The economic blockade had a serious impact on the pharmaceutical supply of the hospitals. In order to cope with shortage the government purchased necessary equipment from Turkey. Paperwork on relevant contracts can be found in the archive of the Chechen Republic.

5.2.8. Infrastructure and welfare

52 Decrees of the President of the Chechen Republic on state protection of institutions of culture and art (9.12.91), institutions of people’s education (16.12.91) and healthcare system (23.12.91)
The social infrastructure of settlements was shattered, utility payments were not fully collected and projects on improvement of infrastructure were frozen. The head of the city administration of Gudermes city Dukhvakha Abdurakhmanov filed an appeal to the Parliament, where he stated that “due to large debt in payments, electricity was turned off in the city from 8 a.m. to 8 p.m. every day; construction projects of water-supply system, gas supply, sewage system were frozen".53

The President regularly ordered to pay compensations to pensioners54 or index the income of the population or to increase salaries to state-employed personnel in the sphere of education, culture and healthcare. 11 categories of citizens were entitled to receive flats and residential premises from the state owned residential fund, which included citizens diagnosed with tuberculosis, cancer, single mothers, multi-child parents.

But the fact is that the indexed pensions and salaries were seldom paid, the welfare system of the republic was virtually destroyed, which increased the dissatisfaction with the regime. According to the Resolution of the Constitutional Court of the Chechen Republic of May 18 1994 “In the period of existence of the Chechen state radical measures have not been taken for leading the economy out of crisis; education, culture, healthcare, agriculture, underprivileged groups of the population collapsing in the running knot of poverty have not been given assistance."

Dudaev, notorious for original public statements, would from time to time accuse the seniors, who were in opposition to him that they were “bought by the Russian pensions” and that in “a normal society children are the social welfare of their parents”. He advised people to “knit socks or collect cones in the forest” or when confronted with the problems of educational system would say that “it’s enough for girls to have three grades of education”. “We gave you freedom, now you have to make a living yourself!”, - he used to say. My respondents who knew Dudaev

53 Appeal of head of town hall of Gudermes to Chair of Parliament Akhmadov Kh., to Chair of Cabinet of Ministers Mamodaev, Minister of Finances Abubakarof of 2.05.93
54 Order of President of the Chechen Republic of November 8 1992 “On compensation payments to pensioners”
55 Resolution of Constitutional Court of May 18, 2003 p.2
well claim that he did not really mean it. He was simply unable to cope with the rapidly failing state.

5.3. Political Crisis: Parliament vs. President

This section analyzes the political crisis between the executive and the legislative powers, which unfolded in Chechnya in 1993, and resulted in a sharp institutional cleavage and in the dissolution of the Parliament, the Constitutional Court and the establishment of authoritarian presidential rule of Dzhokhar Dudaev. Understanding the nature of the political process, the character of the political agency, the mechanisms of conflict resolution is crucial for capturing the essence of state-building dynamic in Chechnya of 1991-1994, and of the role of informal political actors.

The cooperation between the President and the Parliament of the Chechen Republic was fruitful during the first three-four months of independence, however, soon contradictions increased, which finally resulted in an acute political crisis, which virtually paralyzed the state institutions.

The Chechen parliament consisted of 41 deputies, with an age average of 35. Only one of the MPs had no higher education, and only one was an ethnic Russian (Akhmadov, interview 2008).

The Russian MP- Gleb Bunin - was the Chair of the parliamentary committee for healthcare; he supported independence.

The contradictions between the Executive and Legislative powers were primarily ideological, although there was a power struggle dimension to it as well. The parliament was ideologically heterogeneous: 12 of the MPs were strong supporters of President Dudaev and independence, 9 were moderates, supporting the parliament’s Chair Akhmadov, the rest were in between. Both power centers fought for this middle. The points of disagreement were numerous.

According to then Chair of the Chechen Parliament, Khussain Akhmadov, the main difference between the President and the Parliament was the very understanding of the notion of
sovereignty. Dudaev insisted on full independence, while the parliament was inclined to form a sovereign polity closely affiliated with the Russian state:

There were two concepts of state sovereignty: the first was Dudaev’s – an independent state, which could have a common economic, defense and currency space with Russia. But in my understanding sovereignty had no absolute measure. It was always limited by something. We should have less sovereignty because we have a historical connection with Russia and we are located within Russia. We also had to get compensations from Russia for seven deportations and exiles. Chechens are a small people and our sovereignty could well enough be realized on 1/6 of the world territory. Khussain Akhmadov, Chair of the Chechen Parliament, 1991-1993

Difference in understanding the notion of sovereignty resulted in divergent positions regarding politics of symbolic significance, economic policy, negotiations with Russia. Thus, Akhmadov and his associates in the Parliament insisted on keeping a mutual budget with Russia and remaining in the ruble zone, while the President and his supporters were working towards introducing the Chechen money and keeping an independent budget. The President wanted to rename Chechnya into Ichkeria, which the Parliament strongly opposed:

“Once Dzhokhar told me: “Bek, lets give our country some beautiful name.. For example “Ichkeria”...” I said “why the hell would we do that? Chechens call their country Nokhchi-Cho, the world knows us by the name of “Chechens”. He thought that by changing the name we would be out of the legal framework of Russia”. Bektimar Mezhidov, Vice-speaker of Chechen Parliament 1991-1993

However, the most important issue which caused disagreement between the majority in the Parliament and the President were negotiations with Russia. Disagreements on negotiating process reached their peak, when on November 14, 1992 the Russian official representatives Ramazan Abdilatipov and Sergey Shakhraj were supposed to arrive to Grozny, but Dudaev refused to receive them.

“Dudaev was against Shakhraj, and called him the enemy of the Vajnakh people because of the Ingush events and Shakraj’s anti-Chechen statements. He refused to meet him, sent four lorries of guardsmen, put an APC in front of the Parliament, targeted a “Shilka” gun at Khussain’s office, and demanded to give Shakhraj in”. Ilina Sadulaeva, Parliament’s analytical department staffer, 1992-1993

---

56 USSR occupied 1/6 of the world’s territory
57 Sergey Shakhraj is thought to be responsible for the Russian intervention during the Ingush-Ossetian armed conflict, when the Russian army took the side of the Ossetians and participated in the ethnic cleansing of the Ingush.
I called Moscow and asked if it was possible to do without Shakhraj, but Shakhraj was already on the way... We nonetheless carried out negotiations. The head of Investigative Committee organized lunch, we organized security guards- my relatives, relatives of members of Parliament, some Moscow-based businessmen helped, because the National Defense Ministry did not provide any security...” Khussain Akhmadov, Chair of Parliament 1991-1993

Appointing Sergey Shakhraj, a nationalist Cossack, who indulged in public anti-Vainakh statements, the head of negotiating group was a provocation on behalf of Moscow, but still most parliamentarians thought the President had over-reacted. Next time, in the end of January, Shakhraj was not in the commission anymore, but the agreement which was thoroughly worked through and almost signed by the delegation headed by Vice-Speaker of Parliament Bektimar Mezhidov, was not concluded as a result of Dudaev’s disruptive actions:

“We arrived to Moscow airport and were brought to the VIP-hall, tables were laid with cocktails. Then with escort we went to the White house, Mr. Ryabov was chairing the meeting. We discussed the agreement between Russia and Chechnya on common and separate credentials. I emphasized that this was not about our political status, but economic cooperation. In any case, it was decided that we spend 3 days working on the agreement and then we come back. We were taken to dachas of party bosses, I was placed in a separate palace, beautiful girls were caring for us …

Three days later we again met at the table. We had most of points agreed upon. And what do you think? Mr. Ryabov pulls a telegram out of his pocket, which says “I delegitimize the credentials of the Chechen delegation. President Dzhokhar Dudaev”. Can you imagine? Dudaev himself hugged me before leaving and said “May Allah help you, Bek!” And when we left he started screaming that the parliament wanted to unilaterally sign an agreement with Russia! But we knew, if we don’t sign some kind of agreement with Russia, there would be no independence! … So Ryabov said: “What to negotiate? You first reach an agreement between yourselves”. Our delegation had a Minister of Finances, Minister of Education, Minister of Oil and Chemical Industry, MPs, senior bankers. It was a very representative delegation. We could have continued. They could have signed it with us, but they were not interested in the agreement anymore. This was the last meeting at such a high level”… Bektimar Mezhidov, MP of Chechen Parliament, head Chechen delegation during the last Russo-Chechen negotiations.

Along with ideological differences power struggle contributed to the political crisis. President Dudaev was inclined to create a strong presidential regime, while the Parliament, and especially its politically ambitious chair Khussain Akhmadov, zealously insisted on preserving the system of checks and balances.

“The confrontation was a result of the fact that except for 12 deputies, there were no more supporters of Dudaev in the Parliament. From the very beginning he strove for absolute power,
abusing the fact that the people associated freedom and independence with him. But I knew that he was doing nothing to build an independent state in earnest. Instead of strengthening he was destroying the government system.” Bektimar Mezhidov, Vice-speaker of the Chechen Parliament

The main battlefield between the Parliament and the President were institutions and key ministerial appointments. Thus, in May 1992 Yaragi Mamodaev was appointed the 1st Vice-Prime minister of the Chechen Government. Dudaev appointed him without approval of the parliament, for this reason the Parliament considered him illegitimate. Dudaev and Mamodaev tried to reduce the leverage of the Parliament over the choice of Ministers in the Cabinet, and did so by creating state committees, which were aimed to perform ministerial functions, but had no word “Ministry” in the name. This allowed Dudaev to appoint their chairs without approval by the parliament. Thus, the Ministry of Justice was replaced by the Committee for National Reform, parallel to Ministry of Economy a Committee for Management of National Economy (KoUNKh) was created, a Cabinet of Entrepreneurs etc. They were led by people, loyal to Dudaev. “The chair of KoUNKh was a person, spiritually close to him, and also lamro /mountaineer – E.S/ explained Akhmadov. There were protracted disputes between the parliament and the President over these institutions.

Dudaev dismantled the Soviet system of local and regional government and appointed his representatives, the so called prefects, in each of the regions. This contradicted article 73 of the Constitution of the Chechen Republic, which stated that the regional and district councils had to be elected.

Naturally, each power center tried to get their people into the local governments:

“Dudaev introduced a system of prefects and started appointing people. We were against it. He appointed anyway. We issued a provision that he had no right to, but he anyway did, without notifying us... In spring 1992 we finally had elections of the local government. In Gudermes my relative Dukhvakha Abdurakhmanov was elected with my backing, he promised me support in the struggle against Dudaev. Khussain Akhmadov, Chair of Chechen Parliament, 1992-1993

58 Dukhvakha Abdurakhmanov- currently the Chair of Chechen parliament
In late 1992 the conflict between the executive and the legislative power in Chechnya became so acute that the state moved towards a diarchy. The cleavage plainly obstructed the functioning of the institutions, which had divided into pro-legislative and pro-executive, and were in fact sabotaging each other’s decisions and activities. The parliament and the President were ping-ponging legislative acts, with the Parliament issuing resolutions and the President vetoing them, with the President passing decrees and the Parliament denying their approval. The table below illustrates how institutions divided into pro-legislative/pro-executive during the 1992-1993 political crisis in Chechnya.

The Constitutional Court and OKChN (*National Congress of the Chechen People*), an organ, that brought Dudaev to power, of which Akhmadov used to be the deputy chair, and which after the Chechen Revolution remained an ‘out of wedlock child’, since its members were not invited into the government, remained in the middle. In the midst of the crisis, Ilyas Satuev, OKChN’s Executive Committee Chair negotiated between the parties and promoted compromise, while the Constitutional Court tried to stay impartial. Now, 15 years after the analyzed above events, Khussain Akhmadov regrets that the potential of OKChN as a political force was not used in state-building. “It could have been transformed into a respectful moderate political party, which could help stabilize the political process”, claimed Akhmadov.

The most serious consequences of competition between the power centers resulted not only in a lack of coordination, but also sometimes in open sabotage of each others efforts in combating criminality. In the archive I found an appeal of the Chair of Investigative Committee of the
Chechen Republic S.M. Khasanov to the Chair of the Chechen parliament Yu. Soslambekov of May 7, 1993:

“From the moment of creation of the Investigative Committee, various power structures of the Chechen Republic, including law enforcement agencies, create obstacles to Committee’s performing of its functions....the leadership of the investigative committee has valid evidence that a number of persons who have been arrested by investigative authorities and were placed into the preliminary detainment facility of the Ministry of Internal Affairs are being released; lack of any control on behalf of the Prosecutor’s office is conducive to this situation. There are facts when officers on duty at city police departments release the perpetrators ignoring sanctions for arrest, by which they complicate the criminal situation and prevent realization of the principle of inevitability of punishment\(^\text{59}\).”

Another document is an appeal of the Deputy chair of the National Security Service (SNB) Khasimikov S.A. to the Chair of Parliament Akhmadov Khussain:

“Personnel of SNB of the Chechen Republic detained 18 tanks of oil products at the railway station Gudermes... For checking the legality and expediency of the above mentioned contract we have requested the due documents on the cargo, which were not provided to us on the basis of oral order of Albakov A.G./Minister of Internal Affairs- E.S./ not to provide or issue any documents to personnel of SNB. Various obstacles in carrying out investigation into this fact have been created. I ask you to intervene and carry out a parliamentary investigation into this fact.”

The root of the contradiction is clear: SNB and the Investigative Committee were pro-parliamentary institutions, while the Ministry of Internal Affairs and Prosecutor’s Office were pro-President. On November, 18 1992 the President even tried to abolish the Investigative Committee of the Chechen Republic “in connection with its low efficiency”\(^\text{60}\), a decision which was overridden by the Parliament. The Parliament, in its turn, retired the Prosecutor General of the Chechen Republic, El’za Sheripova, a devout supporter of Dudaev and independence, for whom the President fought till the end of the crisis.

As a result of this crisis, we ended up with many centers of power. We had several institutions performing the function of Cabinet of Ministers – the one approved by the parliament, KoUNKh, Cabinet of Enterpreneurs, on top of it Mamodaev as a Prime Minister, whom we did not recognize – Khussain Akhmadov, Chair of Parliament, 1992-1993

\(^{59}\) Appeal of Chair of the Investigative Committee of the Chechen Republic S.M. Khasanov to the Chair of Parliament of the Chechen Republic Yu. Soslambekov, May 7 1993.

\(^{60}\) Decree of the President of the Chechen Republic, of November 18 1992 # 128 “On suspending the activity of investigative committee of the Chechen Republic”.
However, the Constitutional Court on May 18, 1993 ruled that not only the Prosecuting agencies, Investigative Committee, Ministry of Security but also the Parliament had a fair share of its contribution to spiraling criminality:

“Exhibiting institutional ambitions, fully denying the practice of developing common measures for combating of crime, the Prosecutor General Asabaev, the Chair of the Investigative Committee S. Khasanov, Minister of Security S. Albakov, have not had an impact on the criminal situation, which was deteriorating day by day, have not analyzed its origins and roots, have not performed decisively in combat of officials, who allowed lawlessness and arbitrariness…. No one is being brought accountable for economic crimes, negligence, abusing official credentials, bribes. The above mentioned crimes, which primarily erode statehood and moral basis of the society, which destroy economy have not at all been dealt with by law enforcement agencies.”

The Court considered that the responsibility of the Parliament, as represented by its first deputy Chair of Parliament Bektimar Mezhidov, was to carry out control over law enforcement agencies, but in fact connived at the ineffectiveness of the latter”. “Thus, in 1992 B. Mezhidov received over 30 official notifications on grave violations of law by Prosecutor’s Office, Investigative Committee, and Ministry of Security. But he did not bring the materials on illegal actions of the officials of law enforcement agencies to the attention of the Parliament, thus creating obstacles for bringing perpetrators accountable, did not undertake prevention measures for maintaining public order”. Clearly, both power centers disrupted the work of each other.

After the Russian-Chechen negotiations virtually failed, the Parliament ruled on February 16, 1993 to carry out a referendum on the form of government in Chechnya (Presidential or Parliamentary) and the status of the Chechen Republic. The President vetoed the Resolution. The Constitutional Court scrutinized the case and overturned the veto of President Dudaev because the Parliament had the Constitutional right to call referenda, but also ruled that the Resolution of the Parliament contradicted the Constitution in the part where it aimed to question the status and the form of government of the Chechen Republican at a referendum, “because these have already been fixed in the Constitution of the Chechen Republic”.

In April the opposition started a protest rally in the Theatre Square in the center of Grozny, which demanded Dudaev to resign, and to carry out a referendum on the political status of

---

61 Resolution of the Constitutional Court, May 18 p.3-4

In response Dudaev called for his supporters to the Square of Freedom in the center of Grozny asking to endorse him, independence, new elections of the Parliament and Grozny city council. Thousands of people flooded the other square as well. The rallies were announced perpetual until demands satisfied. The center of Grozny turned into a military camp—troops were brought in, tanks, APCs, military field kitchens were set up.64

By April 1993, not only institutions, but civil society and media took sides in the crisis:

On April 17, at the rally of his supporters President Dudaev announced decrees, by which he dissolved the Parliament, appointed Zelimkhan Yandarbiev, a tough-liner separatist, the Vice-

64 Ibid.p.5
president, returned his associate El’za Sheripova back to the position of Prosecutor General, dissolved the Cabinet of Ministers, announced curfew in Grozny, i.e. established a direct presidential rule. Armed supporters of the President took under control the buildings of the Parliament, the Prosecutor’s Office of the Chechen Republic, the building of television.

On April 17, Dudaev announced in the square about the dispersal of the Parliament. In the evening he signed the decree. The protesters started to flood into the parliament. They tried to bully or hit someone. But each MP had his crew, a crowd of relatives, they attended parliament with their MPs, were standing in the lobby... So they somehow prevented clashes.” Khussain Akhmadov, Chair of Parliament, 1991-1993

The parliament naturally considered this decree illegal and continued to work. Twelve pro-Dudaev MPs left the parliament in order for the rest of the deputies not to have a quorum and not to be able to adopt anti-Dudaev documents. Instead two other deputies elected on reserve were brought into the Parliament and the quorum was calculated from the existing number. The Constitutional Court found this illegal. The parliament established the date of referendum for June 5 1993, and formed a transitional government of “people’s trust” chaired by Yaragi Mamogaev, a former Vice-Premier of Dudaev Cabinet, whom the President fired, allegedly as a result of disagreements on economic policy and oil exports. In the streets the atmosphere was getting dramatically tense, threatening the breakout of large-scale violence.

The first fatalities were inflicted by the opposition. On May 25, 1993 in the Theatre Square four men were killed: among them a nephew of the President, Shamil Dudaev. In response, on June 4, Dudaev forces stormed the Grozny city Hall and Grozny Police Station dispersed the demonstration at the Theatre Square and dissolved the Chechen Constitutional Court.

“After Dudaev shot the Parliament and the city hall, we all went home. People were telling me: let us fight with Dzhokhar. But I did not want it. I did not come there to fight for power, I came there legislate and build the state. This is the story of how the first and the last parliament of the Chechen Republic ceased to exist” Bektimar Mezhidov, Vice-speaker of Chechen parliament

65 The questions for the referendum were the following:
1. Do we need the institution of Presidency?
2. Do you trust the President of the Chechen Republic Dzh. Dudaev?
4.
After the parliament was dispersed the republic was renamed Ichkeria. Dudaev established an authoritarian rule, closed oppositionist newspaper “Golos Chechenskoj Respubliki”, and crashed all centers of civic opposition. Criminal cases were instigated oppositional MPs, some of them (including Bek Mezhidov) were arrested.

As the account of the events above has indicated, the nature of the crisis was political-ideological and reflected the differences in approach to the notion of the Chechen sovereignty, to the future of the Chechen state and to key current domestic and international policies, like state budget, local government and negotiations with Russia. The crisis had a power struggle dimension, many disagreements were a result of the President’s attempts to get more credentials, especially over appointments and the parliament not being prepared to let Dudaev strengthen the presidential rule.

Procedurally, the political process in Chechnya of 1992-1994 was democratic and quite legalistic, despite many attempts to slip off this track. The arguments of both sides were usually based on references to Constitution and in cases of acute disagreement, each side resorted to the Constitutional court, which tried to stay impartial. Even after the parliament was dissolved by Dudaev and its building was taken over by his gunmen, the remaining deputies were mindful of the issues of their legitimacy. The very fact that quorum was still an issue after the parliament itself dissolved is suggestive that sides to the conflict remained within the framework of the Constitution and law.

Until April 1993 the political process itself was secular and highly ideological. The ideological divide split the institutions and once the conflict spilled into the streets, the main agency there were civic organizations, political movements and NGOs none of which were based on traditional, kinship, clanship, religious or territorial ties. It was a modern political process with no collective actors entrenched in pre-existing identities. The absence of political actors embedded in affective ties was a result of the significant autonomy of the state institutions and political processes from the society. Dudaev’s state was the state-above- the society, with elites
playing a major role in transition, as predicted by democratization authors, rather than Migdal’s state-in-society.

Dudaev’s choice to end the crisis by force was not an easy one, the cleavage between the executive and the legislative was so acute that it had paralyzed the political system, moreover, once the conflict spilled into the streets, it threatened with major civil violence. Dudaev did not want to risk the fate of independence by holding the referendum, fearing that his state-building project could be outvoted by masses, frustrated by lack of pensions and salaries, fearing Russia and the failing state, which he probably considered temporary difficulties. Dudaev was well aware that part of his political society maintained strong links and connections with Russia and had differing visions of the Chechen future. His problem was what Dankward Rustow called the birth defects of the political community”. Chechens undoubtedly had Rustowian “strong prior sense of community”, but they did not agree on the political future of this community. Ideological differences and failing state put an end to young Chechen “democracy”. By stepping outside the framework of law, Dudaev pushed the political process into the domain of informal politics and subsequently of armed opposition.

The following section will analyze the role of informal patterns of social integration in state-building project in Chechnya of 1991-1994. It will look at the role of teips and descent groups, kinship, religion, regional affiliation, and personal networks on elite- formation and evaluate their role in the political process.

5.4.1. Teips and Descent groups
“With Dudaev started a fashion on teips. This was something like retro-fashion, revival of origins, mentality, we started to remember the old sufferings, the teip structure was romanticized” – Lipkhan Bazaeva, leader of Women’s anti-war movement, 1994-1995

1991-1994 was the period of intense revival of teip identity, which was viewed as a symbol of “Chechenness”, unfairly suppressed during the centuries of colonial rule. The revival of teips and neo-traditional institutions was encouraged by the Chechen government and Dzhokhar Dudaev paid much symbolic support to the Councils of Elders.

On November 22, 1991 the first teip congress /s’ezd teipa/ was held in Chechen-Ingushetia that gave an impulse to a wave of teip gatherings, held either in villages of origin or in settlements on the plain, where large communities of teip members resided. The main objectives of such congresses were to meet up, to get to know each other, to promote teip identity, solidarity and discipline. The teip congresses raised the issues of restoring teip borders and district frontiers, increasing teip solidarity and morale, combat on crime, promoting teip representatives to power.

Many teips tried to collect “teip banks”, but after a number of instances when the raised funding was appropriated by some not very decent members, the idea of teip banks became unpopular. Teip Congresses adopted resolutions which would appear in the regional press but more often were distributed as leaflets.

Teip congresses were usually initiated by middle aged, politically active people, who, as many of my respondents claimed, strove to use teips as a resource to boost their political careers.

“These were politicized elements in power or striving for power, who wanted to exploit teip support. The Elders had nothing to do with these congresses, the organizers tried to win their backing, which was sometimes successful, at other times not”, claimed a member of the Chechen political establishment at the time.

A Chechen ethnologist, Vakha Garsaev emphasized two logics behind the idea to call the teip congresses: on the one hand, for politically ambitious people to make a stake on teip support and, on the other hand, for teip members to encourage solidarity in the conditions of increasing
lawlessness, when police could not fulfill its function of protecting the population from murders and burglaries.

Almost all seniors I interviewed had a very reserved, negative or sometimes aggressively negative attitude to teip congresses, some of them reproduced conspiracy theories of various kinds to explain this phenomenon. “There was a teip Congress of pamyatoy teip. They wanted to have it here, on the premises of the school, which is located on our teip territory. I forbid them to hold it here. I told them that this was a special political trick, aimed to divide us. This was a way to disintegration; KGB did it through teip agents all around Chechnya and Ingushetia to encourage disputes over teip borders, to divide, to clash. Dudaev was part of this KGB project.”

Yaragi Bagataev, village of Vyardi, Shatoy district, senior of teip pamyatoy

Not all teips held Congresses. Some made a decision not to: “We did not have a Congress. At least I have not been at any and haven’t heard of it. This was unnecessary. We had to unite, but instead they started to have their teip meetings. Our activists also told me – let us call a nashkhoy congress. I was against it. Older people did not approve of it.”

Salavat Gaev, Gekhi-chu village, Urus-Martan district, senior of teip nashkhoy, khkajbakh gaar

We had a congress. There was one guy Giriskhanov there, a captain of traffic police. He spoke up, said we should not believe Dudaev, that he was an agent of Moscow. Then some started to praise Dudaev, others to criticize. Nothing good came out of it…

Narkom Dadashev, Khochu-ara village, Nozhaj-yurt district, senior of teip biltoy

National intellectuals and many seniors were aware of the danger of disintegration, which these congresses bore in themselves:

This was a totally crazy idea. Our teip seniors, especially Abuzar Ajdamirov /famous writer-E.S./ spoke against it. But our activists nonetheless insisted that we carried it out. But everyone who came to that Congress was told that first of all we were Chechens and only then teip members. “Those who do not understand this have nothing to do here” was an opening announcement. Said-Magomed Khasiev, Chechen ethnologist, teip alleroy

Congress to some extent succeed to strengthen teip identity, which had some quite unexpected initiatives as consequences. “One day our guys came to me and said: benoy have created a regiment, 300 armed men. Shamil Beno /a politician- E.S./ distributed them weapon. Why cannot we create such a group? I said: “No way, otherwise we will become completely divided”. Later it turned out that there was no benoy regiment, but it was a dangerous gossip and dangerous tendency.”

Chechen politician, teip ejtkhaloy, Kurchaloy district of Chechnya

In 1993 there was an initiative to hold a Congress of all teips. A steering committee was set up, but the Congress never took place. The role of the teip idiom in politics increased after Dudaev dissolved the Parliament and opposition to his regime was growing. Dudaev tried to instrumentalize traditional structures in order to maintain support for independence.

According to Anatol Lieven, a journalist who worked in Chechnya at the time, instead of working with political forces Dudaev started gathering hand-picked national councils, congresses
mainly made up of village and teip elders ‘to maintain the façade of democracy and consultation’ (Lieven 1998:343). Khussein Betelgireev, a university professor, poet, and bard-singer explained that Dudaev tried to revive the old disciplining function of teip and use it for controlling opponents of independence: “Dudaev tried to influence the opponents of independence through their teips. He said that everyone should know, who these people were, which teip they came from, their relatives should bring them to senses” (Betelgireev, interview 2008)

However, this proved impossible, since the disciplining function of teip was lost. My respondents who attended teip congresses noted that ideological divisions, political and economic interests were stronger than teip affiliation, and it turned impossible to achieve any political unity:

“It seems easy to divide people by teip affiliation, but I witnessed how it worked during the protest rallies here. Some benoy people were in the one square with Dudaev, others- with me at the Theatre Square. Benoy even had a fight between each other in Urus-Martan. They decided to have an unarmed fight between themselves. Same with the belgato people. Nadterechny Chechens were all against Dudaev, but they all had relatives in the mountains many of whom supported him”. Magomed Muzaev, Director of Department for National Archive of the Chechen Republic.

In early 1990s the process of revival of teips was initiated from above. There was a demand for new ideas, but nobody tried to foresee how these ideas would behave in reality. The idea of teip congresses was quickly picked up. We carried out our Congress as well, spoke about how we were so great and the best of all. We made an attempt to organize ourselves politically, but it turned out impossible to concur on any one political position. People were so different, everybody had such different interests and views, the society had become completely different...

Ruslan Tsokuev, head of administration of the village of Zamaj-Yurt, Nozhaj-Yurt District of Chechnya, teip biltoy

Thus, political mobilization of teips failed. The only sphere where the teip (or rather lineage) solidarity worked in 1992-1994 was individual cases linked to security or more precisely revenge for offence:

I know several cases during Dudaev time, when teip solidarity transformed into action. At that time there appeared bands, 30-40 armed people each who robbed the civilians. Citizens were defenseless in the face of such groups. One of such groups was commissioned to kill Viktor Kan-Kalik, the Rector of the University. Kan-Kalik did a lot for our university, for the republic, he
introduced new technologies, new educational methods, the attitude to him was very positive. He was not a revolutionary, but he was a creative person who did his professional work. Some careerists and nationalists were jealous that he, a Jew, became the Rector of the University. Someone wanted his position, it was also economy-access to bribes. So armed men in masks arrived, surrounded him as he exited the University. A professor of physics, Abdul-Khalid Bisriev, quickly realized what was happening and tried to shield Kan-Kalik with his body. They shot Bisriev dead. Kan-Kalik was abducted and later was also found killed. After this happened the teip of Bisrievs got together, collected money and swore to find these people and kill them. At that time blood feud was the only protection. Magomed Muzaev, Director of Department of Archives of the Chechen Government

The other case, which Magomed Muzaev could remember was also linked with attacks by armed groups.

One of the relatives of Said-Akhmed Isaev, a doctor habitus of science, was robbed. He was an elderly men, they captured him, humiliated and beat him, kept him in the cellar, miraculously he survived. He turned to Dudaev’s Ministry of Internal Affairs. There was no help. Then the turned to his relatives. They called the teip people. The teip acted very serridly – got together, some of them turned out to be former police officers, they investigated, found these guys, surrounded the village, found the perpetrator who humiliated the old man. he was crawling, apologizing, begging to forgive him for the sake of his ill mother, so they beat him up, took his pants off and threw him in the feet of that old man. Magomed Muzaev, Director of Department of Archives of the Chechen Government

In compliance with the findings of my fieldwork outlined in Chapter 4, teip (more precisely lineage) solidarity in action worked only in cases of blood feud and humiliation. Political mobilization of teips failed, although teip congresses and public discussions made people more aware of their roots. Khozh, a former Chechen combatant recalled: “Until 1990s I did not even know which teip I was. When they started discussing it all after the Revolution, I went to my seniors and demanded that they told me about our teip”.

Political revival of teip identity failed for several reasons. First, during the Soviet times the teip identity was very strongly suppressed. More educated people as well as seniors had a negative attitude to teip identity and considered that the revival of teips fragmented the nation. Second, as has been discussed in chapter 4, teip as a social organization had deteriorated and was divided into numerous large lineages, territorial segments, which were more relevant than the entire teip. The institution of Elders had deteriorated. Remarkably, the Chechen Constitution had age limitation - for the President and MPs not be over 65, which clearly meant rejection of any form
of gerontocratic government. Third, the Chechen national project of 1991-1994 was aimed at a European model of statehood, and declared modern democratic values. And finally, until 1993 there existed a tough system of checks and balances, which prevented teip-or-kin based nepotism. The Chechen parliament was popularly elected, freely deliberating and represented different teips, regions, sub-identities, and the MPs were careful not to let Dudaev or Akhmadov to adopt personalistic approach and select ministers on the basis of criteria other than merit.

5.4.2. Neo-traditionalism: Mekhk-Khel and Seniors in Politics

Newly created neo-traditional institutions like *Mekhk-Khel* (Council of Land) were strongly supportive of independence. The Republican *Mekhk Khel* (Council of Land) was founded in the Square of Freedom during the Revolution of 1991. It was chaired by a very active senior Said-Magomed Adizov, who decided to set up an organization of Elders, and gave it a historical name - *Mekhk-Khel*. *Mekhk-Khel* tried to have representatives of many teips in it, during rallies Adizov asked people to propose candidates from their teips (which means a certain rare category of separatist, rally-attending seniors were elected). *Mekhk-Khel* was very active politically, they organized meetings, discussions in regions, villages, regularly held their Congresses in Grozny, which were widely covered in media. Among major political issues they settled, were negotiations on the territorial dispute with the Ingush in 1993.

Dudaev attended meetings of *Mekhk-Khel* paying them ostentatious public respect. Eventually Mekhk-Khel started to demand increasingly more authority:

“*Mekhk-Khel received legitimacy at a public rally during the putsch. Its chair Adizov was a very resolute, brave, quick and talkative Elder. He took over Mekhk-Khel and tried to dictate his conditions. For example, they wanted Baron Kindarov to be appointed the Minister of Health. Baron was a doctor, who organized tents and medical support for protest rallies during the revolution. So Adizov was shouting everywhere that only Kindarov could be the Minister of health. One day Adizov with a bunch of elders broke into the parliament and demanded that we approved Kindarov. Adizov threatened: „Mekhk-Khel ousted Imam Shamil, it will also oust you!“ My deputy, Bek Mezhidov told him to get lost in Chechen. We basically threw him out of the parliament.* Khussain Akhmadov, Chair of the Chechen Parliament 1991-1993”
There were several impostors in this Mekhk-Khel. I ousted them out of the Parliament. I said “Please, leave, the parliamentarians have to work”. And their senior said “What a bitchy talk?” I sent him to hell and helped them out. And there were no political consequences for me because of that Bektimar Mezhidov, Vice-speaker of Chechen Parliament, 1991-1993

The famous Chechen respect of the Elders turned out to be seriously watered down once certain Elders tried to turn into real political force. They were immediately treated as any political rivals:

Adizov tried to revive Chechen traditions in his interests, it was very difficult to stop this old man. He crashed all authorities except for Dudaev. Dudaev was the hero of the nation. He was a martyr, who took off his general’s epaulets, put his career on the alter of independence. Adizov organized Congresses, demanded to limit the credentials of the parliament, he demanded my resignation, they gathered protests under my windows. I did not like that man and behaved accordingly when they tried to interfere” Khussain Akhmadov, Chair of the Chechen Parliament 1991-1993

The respect was further deteriorating as Mekhk-Khel started to increasingly intervene in daily routines of villages and organizations. The Elders engaged in checking warehouses, businesses, interfered in professional disputes.

A pro-government newspaper “Ichkeria”, which was an independent media until 1993, published several materials, very critical of Mekhk-Khel. “Mekhk-Khel is an organ sacred to every Chechen since ancient times. Its tasks are the issues of war and peace, support of national traditions, reconciliation of clans and blood-feud, but in no way checking of warehouses and supplies bases, intervention in the work of traffic police, resignation and appointment of people,”

The article further reports how Mekhk-Khel’s deputy chair Khussein Bisultanov, who worked at a Grozny tinned food factory “by ways of intrigues and squabbles managed to achieve resignation of a respected workshop supervisor and took his position”. Then he engaged in a conflict with the director of the factory, who demanded him to produce decent work. The workers took the side of the factory director and Bisultanov was asked to retire due to age. Mekhk-Khel intervened, demanded resignation of the factory director, returning Bisultanov back and transferring one of the warehouses to him as private enterprise, while Bisultanov himself tried to change the date of birth in his passport by making a fake court decision.

Having learnt about Mekhk-Khel rulings the workers unanimously expressed their negative attitude to Bisultanov, who “during communist times was a party member, praised the
authorities”, and was suspected of reporting to KGB. Employees of ten workshops signed a note of protest and went on a two day strike. “After this scandal”, concludes the article “Even an infant will understand that such actions of the respected Elders will not bring agreement and peace to our much suffered land” (Ichkeria May, 24:1992).

In another instance, Ichkeria reports the situation in the Pervomajskaya village, where Elders in a similar fashion intervened in the activity of a local kolkhoz director, and when he refused to comply, started a smearing campaign against him and threatened his father. Finally they initiated a general meeting of the village, which ended up in a physical fight (Ichkeria, July 28, 1992).

“Ichkeria” of 6 August 1992 is fully dropping political correctness: “Something strange has happened to a significant part of our Elders. There is an impression that they got obsessed with something. Day and night they sneak around offices of those in authority. They look for ways to get some kind of position, wherever they can…You see, “during the revolution” they were standing in rallies and caught a cold and sneezed and for this now they need to be rewarded, and if not- they would organize self-styled “Mekhk-Khels” and “Islamic centers” and…from there would start preaching truth to the nation, using for this radio and television (for some reason without any restriction)” (Khizraev 1992).

By 1994 Mekhk-Khel discredited itself as an institution to such an extent that it got a pejorative nick name – (Manure of Land, pun on Chechen world Mekhk, which means both ‘council’ and ‘manure or shit’). The aggressively nationalist rhetoric of Mekhk-Khel made this institution associated with provoking warfare.

Mekhk Khel’s chair, Said-Magomed Adizov was shot dead several months after the first Chechen war when he allegedly tried to flee to Turkey, reportedly by his teip member, a notorious criminal authority Alavdi. Reportedly Alavdi came to the Elder and publically accused him of provoking war: “Due to your ideology we started fighting. We did not want to fight, and now you want to flee!”. In response, Adizov kicked him with his crutch. Then Alavdi shot both Adizov and his brother dead.

This grotesque institution and largely the personality of Said-Magomed Adizov discredited the idea of Elders’ involvement in politics with many Chechens. Even Dudaev took them more as a
symbolic, decorative institution, which could be used for legitimizing his policies and national independence. Anatol Lieven reported on an occasion when Elders criticized Dudaev, after which he declared:

“I called you to serve the nation, not to split it. You are here because of me. If you serve the nation, you can stay and help me. If not, you can go home...didn’t ask you here to tell me what to do..” (Quoted in Lieven: 1998:343).

Neo-traditionalism in Chechen politics failed in 1991-1994, once Elders took up additional functions outside ritual and family dispute settlement, the famous respect to them evaporated and they were treated as any political force. Since 1994 for 15 years there have been no serious attempts or interest in trying to revive the institution of Mekhk-Khel in Chechnya. As the two previous sections have shown, despite the attempts to revive and politicize teips, they did not play any significant role in the state-building project of 1991-1994; moreover, these attempts failed (political unification turned out impossible) and discredited the very idea of political prominence of such institutions with the majority of the population. Dzhokhar Dudaev, who in general supported the neo-traditionalism in politics, did not attempt to integrate traditional structures into the political system, rather he sought their symbolic support and legitimization, increasingly so as the regime was loosing its social support and the state institutions were failing.

5.4.3. Kinship
Dudaev had no close relatives in his government. My respondents could remember that one of his relatives was heading the Assay chamber- a commission for testing purity of gold and diamonds. Dudaev (who arrived from Estonia) lived in the house of his older brother from another wife of his father, named Bekmurza. Bekmurza and his son did have some influence on Dudaev and there were relatives in his security guard. The wife of Bekmurza was appointed the financial inspector of Grozny market, which was a non-political, but rather lucrative position.
Dudaev’s immediate family did not benefit from his high political standing. The Parliament’s Chair Akhmadov remembered how Dudaev’s brother Baskhan asked the parliament to use a car from the former garage of the Communist party, which was announced the property of the Parliament. “I signed a paper and Baskhan got a car” (Akhmadov, interview 2008). Besira, the older sister of Dzhokhar Dudaev, told me in an interview that Dzhokhar’s immediate family did not approve of his political career:

“The family was unhappy when Dzhokhar headed the national movement. When he was accepted to the Higher Aviation school - we were happy, when he became a general- we were so proud, we thought now life would be great he had a good salary, a good position, but when he got into politics our mother and I were crying and brothers tried to talk him out of it. As if he would listen to us! He had no time for us anymore”.

At the same time Besira said that during the two wars 36 men of Dudaev extended family were killed, which suggests that many of them subsequently joined Dzhokhar in fighting and continued fighting for independence after his death.

According to the parliaments chair Akhmadov, members of parliament mobilized kinship support on various occasions: when it was necessary to organize security to the Russian government delegation which was not received by President Dudaev, when the parliament was dissolved and Dudaev tried to take over the building of parliament, etc. Ilina Sadulaeva, a staffer of analytical department of the Parliament recalled that during the crisis of 1993, parliamentarians were coming to the sessions accompanied by groups of relatives, who were standing in the lobby and waiting for them. This was partly done for the sake of protection and partly as a way of social activity for young unemployed men who hang out as groupies of their important relatives. Akhmadov admitted that he helped his relative Dukhvaka Abdurakhmanov to win the elections to Gudermes City Mayor’s office, because he promised him support against Dudaev, which Dukhvaka, indeed, provided.

Informal practices based on kinship displayed themselves more prominently at a lower level. In the archive of the Parliament of the Chechen Republic, I found an appeal of employees of a
Grozny Central milk kitchen addressed to the Parliament⁶⁶. The signators of the letter complained that, using the moment when the director of the Central children’s milk kitchen, an ethnic Russian Kabanina L.L. was absent, a nurse Makaeva M. decided to take her place, using the support of her uncle Malsagov Akhmed, a member of the Chechen Parliament “having no due education, or support of the collective” /working staff- E.S./ A complaint was fabricated against Kabanina, and later it turned out during the staff meeting that no one actually filed any complaints…” Nonetheless, MP Malsagov “announced that a Russian would not be the director of the milk kitchen and instead of her would work exactly his niece Makaeva M”. “In spite of all the efforts of Makaeva and her uncle Malsagov our collective will fight till the end for the justice…How can we trust the Parliament of the Chechen Republic if it has a place for such people as Malsagov⁷⁶⁷”- said the appeal.

This story is characteristic of the situation with ethnic relations in the republic of the period, when economic combats often acquired ethnic overtones. Unprotected Russian-speaking population was most vulnerable in the conditions of lawlessness and disorder. This episode is also exemplary of how nurse Makaeva used her close kinship with MP Akhmed Malsagov for patronage in getting a promotion.

5.4.4. Territory
In the literature on Chechnya of 1991-1994, one can frequently encounter an argument that the support to President or opposition had regional aspects. One widely shared opinion is that Dudaev was supported by mountaineers, while his opposition - by lowland Chechens (Gakaev 1999, Tishkov 2001). Experts explain this phenomenon by claiming that more traditional, less educated and mostly unemployed mountaineers supported more radical solutions. There is some truth in this argument, indeed, many of my respondents noted that while their relatives on the

⁶⁶ In the USSR- special shop where diary products for beastfed babies could be bought
plain were more critical of Dudaev, their mountaineer relatives were supportive of him. The counter argument is that tens of thousands of Chechens on the plain also supported Dudaev. The cleavage between the opposition and the parliament in the end boiled down to the issue of independence vs. signing an agreement with Russia. People in the lowland settlements were much more dependent on the Mannian infrastructural power of the state – for them a failed state meant not only lost income, but also electricity, gas, sewage, transport, water supply, everything which more urbanized population is strongly dependent on. Chechen lowland villages are usually very big, often numbering 10 and more thousand people. In fact they were small towns, which were much affected by the failed state, skyrocketing criminality, shortage in food supplies. Mountaineers who had always lived in their smaller, still mostly self-sustaining communities, sometimes with no electricity, and usually without gas, did not feel the failure of the state so strongly. Their dependence on state infrastructural power was minimal and they kept criminals out themselves. What they did feel, however, was that the regime was now Chechen, it was respectful of their traditions and faith and even sometimes placing them above the lowland lifestyle, or that they could now feel at home in Grozny and may be even buy apartments there. Thus, for them the developments were rather positive, and they were prepared to endure difficulties on the way to independence.

The explanation of mountaineer somewhat greater support for secession can be found not so much in traditional vs. more modern mentality, but in ideological cleavages rooted in specific historical experiences and memories. Mountain villages have always been the natural base for armed resistance and abreks (individual guerillas), who had lived in the hills. For this reason mountaineer have always been more often targeted by repressive measures of the state. Collective memories in smaller communities were better sustained than in larger ones with mixed populations. On the average deportation for residents of mountainous villages inflicted much greater suffering that to the plain dwellers, due to the simple fact that they had to walk long distances to regional centers on foot before they were picked up by trucks which took them
to train stations, and for this reason were allowed to take very little luggage and food supplies with them. Very ill and elderly relatives, who could not walk were shot dead, which was usually not the case on the plain. At the same time, I observed that the mountaineers, although more of political nationalists, are much less poisoned by modern xenophobia compared to the residents of urban centers.

Chechen ethnologist Said-Magomed Khasiev agrees that the argument that mountaineers were more supportive of separatism is not valid. According to him, “it all depended on person’s ideological orientation and economic position, not his mountaineer/lowland origin” (Khasiev, interview, 2009).

Another common knowledge of this period is that certain regions supported opposition. Clearly this was the case of Nadterechny region, which right away refused to recognize Dudaev’s regime and later of the Urus-Martanovsky region. My respondents among the former Chechen combatants said that in Urus-Martanovsky district many villages did not let fighters in during the 1st war, did not help them with food or medical supplies.

The phenomenon of regional opposition to Dzhokhar Dudaev is often explained by the fact that two of powerful oppositionist leaders Bislan Gantemirov (from Urus-Martan region) and Umar Avturkhanov (from Nadterechny region) managed to garner support of their clans and co-villages in protest to separatist Grozny (Lieven 1998, Smeets and Wesselink 1995). Section 6.5. will deal more specifically with the issues of regional opposition and will offer, based on my fieldwork, some alternative explanations to this phenomenon.

5.4.5. Religion
Islam did not have much prominence in the national state-building project in Chechnya of 1991-1994, although there were voices raised in favor of an Islamic state already at that time. Dudaev’s vision of Chechnen satatehood was secular and nationalist, moreover Dudaev was tough in keeping Islamists at a significant distance.
Some scholars claim that the separatist project was widely supported by Qadyri tariqa, namely Kunta-Khadzi vird followers-the *zikrists*, but opposed by Naqshbandi. *Zikrists*, who constitute about 80% of Chechen believers, are thought to have been more oppressed by the Soviet regime than the followers of the Naqshbandiya tariqa (Kulchik 1994, Muzaev, interview 2008). My respondents frequently expressed an opinion that “the Soviet state was trying to provoke tensions between the two main movements in Islam by unevenly promoting Naqshbandi tariqa”.

Regarding alleged support of Dudaev by Kunta Khadzi Vird followers, this seems to be more of a myth than a reality. High representation of *zikrists* in the national movement simply follows from the fact that this was the most numerous vird (80% of the population), which was also most conspicuous, when performing their ritual in the squares. At the same time there are some reasons to believe that Dudaev was aware of speculations regarding his alliance with *zikrists*, and was careful to have representatives of Naqshbandiya tariqa in his government. An example is Andarbek Yandarov, the first Chechen doctor habitus of philosophy, who wrote a book on Sufism in Chechnya and was appointed the Minister of education, despite the fact that he used to be the second secretary of the Chechen-Ingush Republican Communist party. Dudaev avoided promoting former party *apparatchiks*, but Yandarov was the grandson of a prominent Naqshbandi Sheikh, Solsa-khadzi from Urus-Martan, which probably determined the choice.

Adam Dukhaev, the editor of the regional newspaper “Terkijst” in the oppositional Nadterechny region of Chechnya, said that the vird factor did not play a role in the political orientation of the regions’ population, and although historically most of Nadterechny Sheikhs were Naqshbandi, the region’s believers are divided evenly between Naqshbadi and Qadiri tariqas (50-50) and their support of political leaders was not shaped by vird identity. Khussain Akhmadov, the chair of the Chechen Parliament, who is currently the advisor to Mufti of Chechnya, also claimed that support of separatism cut across descent, kinship and vird ties.

In the given period, all pre-existing patterns of social integration (descent, kinship, religion, territory) co-existed peacefully at the social level and were acknowledged as identities by the
political regime, unless they were politicized (Urus-Martan and Nadterechny regions) and turned into political opponents. Following Migdal’s classification of state-society relations, Dudaev’s policy towards informal patterns of social integration can be characterized as accommodative, but keeping them outside the political system (Migdal 1988).

5.4.6. Political elite formation: ideology, personal networks

In some of the key positions were people loyal to Dudaev. In 1992 Albakov became a Minister of defense. He was Dudaev’s close person. Dudaev asked me to approve him in the Parliament. I did, although it was difficult, MPs learnt that this was a Dudaev protégé, they immediately accused me of lobbying his interests. Albakov almost cost me the position of the chairman, the MPs initiated my impeachment… So, I helped Dudaev with Albakov and he helped me to appoint my co-villager Ediev, the Minister of Transport. He was a professor at the Institute of Automobile transport, a big scholar. I could not have approved him through the parliament, so I asked Dudaev to appoint him with his decree. We had such compromises, of course. Khussain Akhmadov, Chair of Chechen Parliament 1992-1993

Later, during the crisis of 1993, Ediev as a member of Dudaev’s government fully supported the President, in Akhmadov’s expression “once he became part of his government, he was fully dependent on Dudaev and strictly subordinated to him. He was no more my man, he was part of his team, fully loyal him, as were all of his ministers” (Akhmadov, interview, 2008).

‘Dudaev’s people’ were usually his ideological supporters, ‘people who were close to him spiritually’ or those who helped him to come to power. Yaragi Mamodaev, the first Chair of Dudaev government, was known for helping Dudaev financially in early years of his political career. El’za Sheripova, the Prosecutor General was Dudaev’s close associate since the times of revolution and OKChN; many of his ideological comrades were in the judicial system. Dudaev did not allow for kinship relations in government, neither did the parliament. In the first two years of independence, mainly active supporters of the revolution have been promoted. However, gradually, especially as the post-revolution euphoria was going down, and when the regime moved towards authoritarianism, kinship ties started making their ways into the political establishment. Members of Dudaev government tried to bring people loyal to them into the
administration. “Some person with an insignificant position of a unit manager, who would have access to economic resources and be linked with personal ties to the minister, could actually have a major influence over a political institution” – claimed one of the government members.

5.4.7. Personal networks and “joint responsibility”
Dudaev’s political elite was not based on kin, descent, territory, region or religious affiliations, but it was mostly ideologically driven. However, personal networks comprised of kinship, neighbors, friends, acquaintances, were prominent at the medium and lower-level of decision-making. Disorder and lawlessness were to a large extent results of a generally shared value that reporting illegal activity to authorities was not a proper behavior. Unless they were directly affected, people usually closed eyes on how their acquaintances and former colleagues used public goods for private purposes.

The Russian term “krugovaya poruka”, used by Ledeneva to explain post-Soviet economy, which means mutual or joint responsibility and covering up, expresses the phenomenon quite precisely. The results of Parliamentary investigation of the situation in Vedensky region of Chechnya is a good example for the analysis of this phenomenon. Below I quote archival materials related to three episodes from one region, illustrative of mutual covering up of co-villagers, neighbors, acquaintances and co-workers.

Episode 1: “In the beginning of the summer of the current year, the residents of villages Makazhoj and Tsa-Vedeno during village councils decided to reorganize their kolkhoz and to transfer the kolkhoz lands under the jurisdiction of the local government. In this situation, in order to preserve the pedigree buffaloes of the kolkhoz, the Ministry of Agriculture and Nutrition instructed the kolkhoz to sell state-owned buffaloes to another state-run kolkhoz “Predgorny” for a mutually acceptable price. “Counter to this instruction, the board of kolkhoz sold the buffaloes elsewhere. The remaining cattle residents of Kharachoy have taken to private households.
Moreover, the members of kolkhoz divided kolkhoz vehicles (cars, tractors). No measures have been thus far taken by the law enforcement agencies or Ministry of agriculture about it. This first episode can still be classified as a somehow justifiable decision to divide the common property of a former village kolkhoz, especially since everyone knew how violently these kolkhozes were created in the first place. The second episode involved obvious damage to common good, and inflicted significant harm.

**Episode 2.** Sovkhoz “Plodopitomnicheskij” is located between the villages of Vedeno and Oktyabrskoje. In 1991 the Council of Ministers of the Chechen Republic allocated 43 hectares of land for additional settlements and gardens for families. However, on top of it several residents of village Kharachoy and of other settlements illegally captured 8.5 hectares of land from the sovkhoz. These persons cut 1089 trees from sovkhoz orchards, broke 189 reinforced concrete posts, damaged 8100 meters of pole-hedge wire. The total damage amounted to 165,431 rubles. The prosecutor’s office of Vedensky region instigated a criminal case, which was transferred for investigation to Vedensky security unit, which two months later suspended the case, “without having interrogated or interviewed a single person, without carrying out any investigative measures”. This decision was overturned by the regional prosecutor, who sent the case back, however, the local investigator again had not taken any further actions. As a result of impunity “illegal self capture of lands has taken a mass character, there have been cases of violent conflicts over land disputes.” In order to tame these processes, the prosecutor’s office of the region sent 13 cases into the regional court with no reaction from it.

This episode is an example of mutual covering up based on *zemlyachestvo* (regional solidarity). Since the perpetrators’ illegal activities did not harm any particular family or anyone else’s personal interest, local authorities saw no immediate benefit in dealing with them in accordance with law.

The third episode is an example of mutual covering up based on professional solidarity:

---

69 Ibid.
Episode 3. In the end of March 1992 the family of the district inspector of the Vedensky regional security unit, Idrisov, illegally moved into a state-owned flat, which previously belonged to KGB. The regional Prosecutor sanctioned an administrative eviction of Idrisov family on May 9 1992, and the same day it was transferred to the regional court for implementation by the local security unit. For five months the decision of the Prosecutor had not been enforced. Then the regional Prosecutor filed a presentation to the Minister of Security of the Chechen Republic, demanding to take measures. No measures had been taken. Illegal capture of flat by a security serviceman and lack of adequate reaction to it provoked other residents to capture flats and state-owned premises. Thirteen of such cases were instigated into illegal capture of property by the Prosecutor.

In this case the local security servicemen did not want to oust one of their colleagues from an illegally captured flat, the Ministry of Security was not interested to take measures against the inspector of its department, leaving the regional Prosecutor totally impotent.

Generally, according to the report of the parliamentary commission, Vedeno regional law-enforcement agencies instigated 36 criminal cases in 1992, only three of them reached the court. “Impunity rules in the region, where offenses are taking a mass character.”- states the report. The whole Vedeno region was the embodiment of “krugovaya poruka” based on neighborhood, regional and professional ties.

Despite the fact that the top political elite was not formed on the basis of particularistic ties, the regional and local-level governance was tolerant to informal and illegal practices, mutual covering up and non-reporting of illegal actions by neighbors, co-villages, kinsmen, friends, members of personal networks and corporate groups of professionals. These practices certainly existed in the Soviet times, but after independence they proliferated. Clearly, the new Chechen state was unable and did not attempt to create anything approximating a Weberian rational bureaucracy, or effective impartial judiciary.

\[70\text{Ibid.}\]
5.5. Challengers to the Regime: Regions in Opposition

In 1993 after the dispersal of parliament, Moscow started to help covertly the opposition with money and arms supplies (Lieven 1998:79, Orlov and Cherkasov:1998). There is a wide-spread opinion that several pro-federal politicians took up arms, consolidated power in their native regions and went against Dzhokhar Dudaev with the Russian support. They were Umar Avturkhanov from Nadterechny district, and Beslan Gantamirov, the former chair of the City Hall of Grozny, who quarreled with Dudaev over oil and allegedly garnered support in his native town of Urus-Martan. They were joined by Ruslan Labazanov, a hardened criminal, who had a personal grudge against Dudaev. Labazanov set up a criminal gang of 40-50 people and acted freely in the town of Argun.

On December 16, 1993 the three leaders set up the Temporary Council of the Chechen Republic with Umar Avturkhanov as its chair, and they recognized Chechnya part of the Russian Federation. In June 1994 they called for a “Congress of People of Chechnya” in Znameskoye village, the administrative center of Nadterechny region. The Congress voted no confidence to Dudaev and acknowledged the Temporary Council as the “highest organ of government” for the transitional period. The Temporary Council received over 150 mln. rubles support for “stabilization of the situation” from Moscow (Orlov and Cherkasov 1998).

The fact that anti-Dudaev armed opposition was region-based in usually linked with the personalities of Gantamirov and Avturkhanov and often perceived as another proof of clan-based politics in Chechnya. Anatol Lieven, for example, claimed in 1998 “The money and backing that came from Moscow allowed pro-federal field commander Umar Avturkanov to consolidate power in his native Naursky region /mistake-Nadterechny region-E.S./ by paying wages and salaries to its inhabitants” (Lieven 1998:80). My fieldwork in these two regions produced a slightly different vision of the nature of regional opposition to Dudaev.

I carried out interviews with eight residents of Urus-Martan, the second largest town of Chechnya, who were politically active in 1991-1994. They provided their vision on the “special
position” of Urus-Martan during Dudaev and Maskhadov’s times, all under the condition of anonymity.

According to my respondents, Urus-Martan became oppositional long before Bislan Gantamirov appeared there. Urus-Martan has always been a town with high level of education and had its own active elite – intelligentsia. It has also been a town of superfluous labor force. A large part of its residents worked on seasonal jobs in Russia or moved to Russia, which made them more integrated with Russia, and ‘knew how people lived elsewhere, and how the state works’. The planning of the town is very urban, unlike Grozny, where some districts resemble villages with people living in private houses, keeping cattle and large vegetable gardens. In Urus Martan there was not enough land for each family household, so people had small gardens and mainly lived on a salary, which made them very dependent on the state.

During early years of perestroika several civic organizations were founded in Urus-Martan, which supported democratic reform. A strong and well organized civic movement emerged, and the town became the first one in the USSR (!), to get rid of a communist city mayor and have him replaced by a democracy-oriented leader. After the Revolution of 1991, Urus-Martan first supported independence, but soon became disillusioned:

The changes did not bypass Urus-Martan. People enthusiastically elected the President. Many hopes and expectations were linked with Dudaev. The educated part of the Chechen society, large part of which lived in Urus-Martan demanded some kind of democracy. But was just a declaration of democracy. In fact louts, who perched on power were dictating their rules to the others and started to seize with their tentacles everything that could be appropriated. XX, staffer of local administration of Urus-Martan

Because Urus-Martanians were educated and travelled a lot, we knew what the state should be like, how authority should function and we expected that the Chechen authorities would implement some minimal policies: pay pensions, welfare payments, create employment opportunities. Dudaev inherited enormous property and economy. For example, in Urus-Martan, the Michurina state farm was a millionaire; tens of thousands of livestock were in this region, we had good crops of grain, all enterprises functioning, and very hardworking people. Having all this, Dudaev was incapable of organizing basic things, it was clear that they simply did not know how to govern. Everything that we had was gradually plundered, huge agricultural enterprises fell into decay, factories and plants were closing. And when people asked Dudaev to please pay the pensions, he would say on TV- collect cones and knit socks. People started to understand that nothing proper can be done with such authorities. XXX, lawyer, Urus-Martan
Since perestroika times, Urus-Martan already had well organized elite and a charismatic leader - Yusup Elmurzaev, a history teacher and later inspector of regional department of education. Already in 1992 Elmurzaev and his colleagues created the Temporary Council and declared that Urus-Martan was not subordinated to Dzhokhar Dudaev, Urus-Martanians created their own guard and protected the city. “Urus-Martan has always supported the Russian official authorities. Yusup Elmurzaev was the supporter of evolutionary development of Chechnya and Russia. He said, we will do our best that neither Russian nor Dudaev troops enter this city,” recalled a journalist of the local newspaper.

It was only in late 1993 that the oppositional city mayor of Grozny Bislan Gantamirov joined the breakaway city with his own paramilitary groups. In late August 1994 Dudaev forces tried to take over the city. “Our guys were keeping guard at a checkpoint, when Dudaev gunmen arrived and shot them dead point blank. On September 1 was the first clash, Urus-Martanians cleaned the city from alien gunmen. On October 19th in the morning there was already a full scale attack with armored vehicles. They had great losses and had to retreat. They then took the corpses of their killed back to Grozny and this aroused indignation of people. Later Dudaev himself acknowledged that if Urus-Martanians had one tank, they would have taken over the capital. Dudaev’s position was very shattered at that time.” XXXX, Deputy Head of local administration

All of the respondents claimed that Gantamirov (the Chair of City Hall of Grozny), played no role in the “special” position of Urus-Martan. “Gantamirov survived thanks to Urus-Martan and when his military base was attacked, he for some reason happened to be elsewhere. Our leader here was Yusup Elmurzaev and the Temporary Council of Urus-Martan district, which included local respected people. There were lots of very good young men, who supported Yusup and would do everything he would say. As to Gantamirov, we very negatively evaluate his actions and do not treat him as an authority- said a local journalist who seemed to express everybody’s opinion.

A very similar situation I found in the Nadterechny region of Chechnya, which is located on the right bank of Terek river and was the first one to declare its non-compliance with Dudaev regime. Local activists elected their own regional administration and together with religious authorities persuaded the population to continue recognizing the Russian authorities. Nadterechny Chechens regularly and on time received their pensions, salaries and subsidies from Russia unlike in the rest of Chechnya.

As pointed out above, the Nadterechny region had historically been strongly oriented towards Russia. “Nadterechny Chechens have always been different, they are far away from Grozny,
more Russified, on top they got some good financial inflows for their opposition to Dudaev”.

Khussain Akhmadov, chair of Chechen parliament 1992-1993

The editor of the Nadterechny regional newspaper “Terkjist” Adam Dukhaev explained in an interview: The majority of our population was pro-Russian, but about 10% were pro-Dudaev. One village in the region was fully Dudaev’s. It was not linked with kin ties, but ideologically they wanted to be with their people. Dudaev’s television was full of anti-Nadterechny propaganda, Nadterechny Chechens were called traitors, who went against their own people”, so this village had retained their own opinion”. (Dukhaev, interview 2009)

According to Adam Dukhaev, since the 19th century Nadterechny Chechens have been loyal to Russia. Russian general Yermolov in the 19th century wrote that Nadterechny Chechens, trying to preserve their fertile land, would be forced to serve in the Russian army against the rebellious mountaineers. In the 19th century Caucasian war, the Imperial army drafted one man from each ten households to fight against Imam Shamil. Many of them became prominent officers. Police was also manned by Nadterechny Chechens since then.

The fact that Doku Zavgaev, the first Chechen elected the Secretary of the Communist party in 1990 was from Nadterechny contributed to the special position of the region, but not much. Doku Zavgaev did not recruit many of his Nadterechny people into government- said a member of the regional administration. More important, in his opinion, was the fact that three Zavgaev brothers, who were all influential people during the late years of USSR, channeled the Russian support to Nadterechny. Doku’s brother, Akhmed Zavgaev, was the head of the regional government. Umar Avturkhanov was the mayor of the region. Umae Avturkhanov was from the same village as Zavgaev brothers and received financial support from Russia through them. Alliance of Nadterechny and Urus-Martan districts was, indeed, a result of elite coalition.

“Bislan Gantamirov, the chair of the city hall of Grozny, born in Urus-Martan region, quarreled with Dudaev and moved to live to Nadterechny region. He made a coalition with Umar Avturkhanov and then established ties with his regional oppositionists, and the two regional elites allied within the republican Temporary Council,” explained the member of administration.

On August, 11 1994 Yeltsin was interviewed on television and on the subject of Chechnya he stated that intervention by force was “impermissible and must not take place” but then added
with a sly smile: “However, the situation in Chechnya is now changing. The role of opposition to Dudaev is increasing. So I would not say that we are not having any influence at all” (Dunlop: 1998:197). Dudaev instantly reacted saying that Yeltsin’s declaration on proved that he personally directed the “unprecedented provocation” of Avturkanov’s opposition. Dudaev interpreted it as ‘a Russian aggression’, declared the holy war - gazavat and passed a decree of military mobilization within the republic. (Dunlop 1998:197) Two weeks later the Russian deputy premier Sergey Shakhraj stated that “the possibility of a political dialogue with Dzhokhar Dudaev has been exhausted”. In the end of November the decision was taken to adopt the ‘force variant’ of resolving the conflict.

On November 26, 1994 the forces of armed opposition headed by Umar Avturkhanov and Bislan Gantamirov together with federal servicemen tried to storm Grozny. Unobstructed tanks entered the capital, reached its center, where they were destroyed by the Chechen forces from grenade-launchers. About 30 tankists were killed, about the same number were captured alive. Since November 27, Russian TV channels showed these captives, who admitted that they were Russian military servicemen contracted by the FSK (Federal Service for counter-intelligence). On November 28, Pavel Grachev, officially denied that these were his servicemen. Next day Dudaev declared that the captives would be shot dead, if the Russian side did not acknowledge that these were her soldiers. The same day the Security Council of Russia adopted a decision of the military operation (Orlov and Cherkesov:32). On December 11, 1994 the Russian troops entered Chechnya and the 1st Chechen war broke out.

“Dudaev wanted to meet Yeltsin. For some reason I think that if he met Yeltsin, he would have signed that agreement which we had prepared. But he wanted parity. If this meeting would have taken place, there would have been no war, -” claimed Bektimar Mezhidov, Vice-speaker of Chechen parliament

The opposition with their debacle of 26th November made a great favor to Dudaev. When people leant that these were contracted soldiers storming Grozny together with Chechens, the effect was reverse. Dudaev’s government was in a deepest crisis. If it had not been for the 26th, I give 100% he would have been replaced by internal opposition, without any violence. The war could have been avoided. XX, member of local administration Urus-Martan
Dudaev declared freedom and independence, something that people were waiting for generation after generation, our forefathers were fighting for it with arms. We were waiting for such a man, such a development, to start living in peace, to put an end to wars and extermination and subjugation. I am an old man, I don’t understand many things, I don’t know why it did not work out for him. But I regret that it did not work out. Said- Ali, Chechen peasant, born in 1911

Conclusion

In 1991-1994 Chechen political elites, who came to power as a result of a national revolution, attempted to build a modern secular nation-state. The analysis of this chapter shows that the political process in the given period was secular, ideologically and economically driven. Until 1993 political actors tried to uphold to their commitment to stay within the framework of law and minimal definition of democratic procedure, with independent legislative and executive powers, fairly impartial Constitutional Court, a functioning system of checks and balances. By 1993 Chechen political system was paralyzed by acute political crisis, which was an outcome of intense struggle between political actors who sought to implement their different visions of good Chechen statehood (separatist vs. sovereign in alliance with Russia), based on their different memories of the existence under ancien regime and different ideological orientations. The cleavage cut very deep, dividing state institutions, civil society groups, media, producing a deep ideological divide in the society and threatening major violence when the power centers mobilized their supporters to get into the streets. The challengers of the regime were represented by civic organizations and movements, which had no links to traditional structures, informal patterns of social integration or religious groups.

Two regions with traditionally pro-Russian orientation (Nadterechny, Urus-Martanovsky) gradually announced their non-compliance with the government in Grozny. The Temporary Council of the Chechen Republic, an organ created by leaders of opposition with support of Russia, was based in these regions. The oppositionist groups were not embedded in teip, religious, or kinship identities or organizations, they were ideologically and politically driven.

Regional identities played an important role, but more important was the general pro-Russian
and anti-Dudaev consolidation. Moreover, my fieldwork revealed that regional opposition was not linked to personalities of Avturkhanov and Gantamirov, and their specific ties to the locales, but was determined by historical and social conditions which made regions associated towards Russia and the presence of organized civic groups and local leadership, which consolidated ideological opposition.

Thus, the analysis of this chapter refutes clan politics argument, which claims that in Chechnya inter-clan tensions lead to group mobilization and violence (Collins 2006:41) or that “subethnic teips became enshrined in Moscow’s decision to launch a bloody invasion in 1994, some groups were most closely allied with Russia and others were more staunch supporters of independence“after the collapse of USSR (Schatz 2005: xvi). The clan politics literature is lacking in understanding of what teip/clan really was at the moment, it misunderstands the nature of the political process in 1991-1994 Chechnya, underestimates the role of ideology, political and economic interests, regional identities which were decisive in political outcomes.

The principal problem of Chechen state-building was what Dankward Rustow called “the birth defects of the political community”, the profound lack of agreement on the political future of the nation. The other crucial challenge was lack of knowledge, experience, and sometimes will, to build a modern state in earnest, the lack of capacity to govern and to deliver social goods to the society. State failures to maintain industry and employment, to fill the republican budget, provide for education and healthcare, enforce law, combat crime, and ensure functioning judicial system, to maintain residential infrastructure, pay welfare, and salaries were crucial in determining people’s attitudes to the regime, not their teip or clan affiliation.

Despite President Dudaev’s support of neo-traditionalism in politics, of revival of teips and Councils of Elders, he did not attempt to incorporate them into the political system or make them play any significant role in the political process. Using Migdal’s categories of ideal-type societal reactions to state, quoted in Chapter 1, Dudaev was looking for legitimization of his regime by informal actors, which is the weakest pattern in Migdal’s classification (Migdal 1988:33). The
revival of teips passed as an element of retro-fashion. Except for a handful of cases, which were usually linked to the murder or the humiliation of its members and the ineffective of state security services in punishing the perpetrators, teips (rather lineages) were unable to mobilize for any significant actions. Political unification of teips proved impossible. Neo-traditionalism in politics was equally unsuccessful. Elders who went into politics were treated as any other political actors, with no special respect and their role was limited to that of politically engaged civic organizations, not institutions. Elder’s attempts to interfere in professional matters and political issues stumbled on firm resistance on behalf of the society and state institutions. Moreover, the performance of some of the elders seems to have discredited the idea of reviving traditionalism in politics.

The analysis in this section has shown that at the top level of the political elite, kinship, neighborhood, territorial relations did not play any prominent role, the state was largely autonomous from the social structures and in the situation of comparatively low-risk environment (no immediate security risks for the President, no risks linked with high personal corruption or other illegal actions). Dudaev did not need a strong-tied organic grouping around him. Strong parliament, the system of checks and balances, were crucial in preventing nepotism and affective ties in the government.

Nepotism and illegal informal practices flourished at the regional level, especially mutual covering up of illegal economic activity. These practices were based on a whole array of territorial, kinship, friendship, professional, religious identities and ties. The 1991-1994 case shows that Chechens turned out inefficient in performing disciplining functions in respect of other Chechens if the action lay outside the framework of traditional law. Blood feud tradition made Chechen security forces impotent in the face of daring criminals. In regional communities where everyone knew everyone investigating authorities, prosecution and courts were reluctant to enforce discipline on their co-villagers or acquaintances who illegally captured former state property, or were involved in questionable economic activities. In the sphere of economic
crimes, mechanism of mutual covering-up were far more prominent than the commitment to the newly born nation-state. This was probably a result of post-colonial thinking: after so many years of state police functions having been performed by alien state structures the society was not prepared to take them up itself, especially just after acquiring independence. On the other hand similar processes of lawlessness and *krugovaya poruka* described in this chapter at that time were characteristic of the metropolis itself.

President Dudaev state-building project failed and lack of consolidation is too obvious to be discussed. The prominence of various patterns of social integration in Dudaev’s elite is summarized in the table below:

Table 5.3. Prominence of patterns of integration in elite formation in Chechnya 1991-1994

*where 1-insignificant; 2- some presence, 3 – significant presence, 4- prominent 5- very prominent*

<table>
<thead>
<tr>

<td>insignificant</td>
</tr>
<tr>
<td>Territory</td>
<td>-</td>
</tr>
<tr>
<td>Religion</td>
<td>insignificant</td>
</tr>
<tr>
<td>Ideology</td>
<td>prominent</td>
</tr>
</tbody>
</table>

Such a low prominence of strong ties based on ascriptive identities should be explained by the nature of the political process, which was ideology-driven, by internal constraints on the government, such as checks and balances (assertive parliament, quite independent judiciary) and organized opposition, and low risks of physical elimination of leaders or of prosecution for large-scale illegal economic activity. Internal constrains on the government can be evaluated as follows:

Table 5.4. Internal constrains on the Chechen government (1991-1994)

*where 1 - negligible; 2- weak , 3 – significant, 4- prominent 5- very prominent*

<table>

<td>5</td>
<td>2</td>
<td>2</td>
</tr>
</tbody>
</table>
The percentage of strong ties in Dudaev’s government was low. Informal patterns of integration behaved differently towards the government. Table 5.5. shows that structures pre-existing the Dudaev regime preferred to be accommodative or supportive, while the challengers of the regime were embedded in ideology or regional identities rather than in ascriptive networks:

This can be explained by the fact that “traditional” Vajnakh institutions are usually consensus-oriented, when dealing with the Chechen agency, moreover, being the bearers of memories of grievances they were more supportive of the Chechen state. However, most importantly they were not organized politically, unlike groups driven by ideology or regional oppositional sentiment.

This chapter will analyze the 1997-1999 political processes in Chechnya, when after the end of the first Russian-Chechen war of 1994-1996 the Chechen elites undertook a second attempt at independent polity-building.

I start by describing the socio-political context which brought about the regime change, shaped the initial socio-political circumstances and elite choices in the analyzed period. The second section will analyze the state building project itself with a focus on the function of the newly created institutions, the President’s efforts to ensure elite consolidation, the principal challengers to the regime: both the formal opposition and
the informal groups. I will then look at the state’s infrastructural power- the capacity to deliver social goods. While analyzing government’s attempts at maintaining economy, replenishing budget and collecting taxes, supporting education and healthcare, law enforcement, armed forces and judicial system I will discuss challenges faced by the government, and analyze its responses to the crises. I will show that the main challengers of the regime were armed criminal groups and paramilitaries and that the role of teips and lineages was nil, kinship in politics was hardly visible and even virds and tariqas started to raise their voices only by the end of the analyzed period. I will conclude by assessment of the reasons for the failure of the state-building project through the prism of the interaction between formal politics and informal institutions and practices.

The 1997-1999 state-building project in Chechnya was shaped by the social and political changes brought about by the 1994-1996 Russo-Chechen war. The first Russo-Chechen war was successful for Chechen separatists and concluded in Khasay’yurt Peace Accords signed on 31 August 1996 by Aslan Maskhadov and General Alexander Lebed. The document stipulated the end of the military conflict, withdrawal of the Russian troops, commitment not to use force against each other and resolve disputed issues on the basis of international law (Nezavisimaya Gazeta 3 September 1996). The settlement of the political status of the Chechen Republic was postponed until the end of 2001.

At the ceremony after signing the Accords, Vladimir Lukin, a member of the Russian delegation, then MP of the Russian State Duma and currently the Ombudsman of Russia dropped a phrase, which is still remembered by many and which had strong implications for Chechen state-

71 on behalf of President of Chechen Republic Ichkeria, Zelimkhan Yandarbiev
72 on behalf of the President of the Russian Federation, Boris Yeltsin
building trajectory of 1996-1999: “In five years Russia will strengthen and we’ll see what happens.” During the electoral campaign, Shamil Basaev repeatedly quoted this phrase and insisted that the status of Chechnya should be resolved before 2001 (Tishkov 1998:64). Unresolved status was used by the main field commanders as a pretext not to demobilize their groups.

Maskhadov’s state-building was unwrapping within a society, which had just lived through a most destructive asymmetric war. According to the annual report of the Institute of Ethnology and Anthropology of the Russian Academy of Sciences, 80% of the republican economy was destroyed, along with social infrastructure- 121,760 houses and flats, all central republican medical clinics, over 400 educational institutions were bombed out fully or partly (Tishkov 1998:73). Impoverishment, routine encounter with human death, almost 500,000 refugees, free access to arms, revenge, psychological trauma, break up of morality and ‘paramilitarization’ of the male population were just a few of the social consequences of the war. The Russian government recognized damages and the Khasav’yut Accords were supported with a package of economic agreements, by which Russia took up the responsibility to finance the reconstruction, pay pensions and salaries.

The Russian military invasion affected the political orientations of the population, but also brought significant social change – profound Islamization and the emergence of new patterns of social integration- paramilitary groups. The war naturally and drastically weakened the part of the Chechen identification, which was positively correlated with Russia. The fact of the invasion, and indiscriminate violence reduced the pre-war achievements of the pro-Russian opposition to almost nil, confirmed old fears, intensified ‘memories of grievance’, and discredited the idea of the Russian statehood. The war also accelerated the re-Islamization of the society. It started in 1994 as an anti-colonial war, with the idea of ‘national liberation’ being the major motif of rank-and-file. By 1997 Islamization was very prominent, all of the Chechen politicians resorted to Muslim discourse in their public statements. Clearly, religion becomes important among
societies at war: in the conditions of random violence and death, there was a turn to faith among the population. In the background of the general Islamic revival there emerged new religious trends—fundamentalism or Salafism, or Wahhabism—which proved very efficient in military organisation and discipline. International Jihadists who arrived to Chechnya in some numbers in 1995 were bearers of this ideology and invested much effort to diffuse it among post-Soviet field commanders and rank-and-file.

Paramilitary groups strengthened gradually. All former combatants I have interviewed described the first two weeks of the war as chaos. There were too many volunteers who were actually more of a disrupting than a military force, there was no central command, groups formed on their own, spontaneously and often randomly.

*It was difficult even to join this nightmare. For two weeks I could not find a group. The majority of volunteers were forming groups on the basis of previous acquaintances, friendships, and I had no acquaintances, I had just arrived from Kazakhstan.* Khozh, former combatant

However, unified command was established quickly armed forces were divided into fronts and then into sectors. Despite unified command, autonomy of military units was significant. Made up of volunteers who could come and leave, dispersed around vast territory and fragmented by isles of territory under control of the federal troops, commanders of small units were rather free in their daily planning. Internal cohesion in groups was strong.

Groups were formed on the basis of village affiliation, previous acquaintance or just randomly. Often their social and regional composition was heterogeneous. The commanders were usually people with some prior military experience and older than others, but not necessarily the oldest:

*In our group the commander was 49 years old, he was a school teacher of military education. We had other teachers with us, as they are called—intelligentsia. I was 32. The oldest was 56, the youngest—18. I Two of us were from Groznsensky (Selsky) region, 3 guys were from Grozny, one guy was Adyg,* 73 *the rest were from Nadterechny and Naursky regions, totally 21-22 people. All except for one served in the army…* Khozh, former combatant

---

73 (Circessian), an indigenous Muslim nation of the North Caucasus
None of the former combatants whom I have interviewed mentioned that their group was based on kin or vird affiliation, moreover, many told me about their cousins and other relatives fighting in other groups elsewhere, and they did not seem to be interested to be closer to them. They did mention, however, that they preferred to be in a group with someone they knew, preferably co-villagers or people from the same residential neighborhood:

*I wanted to be with my guys, from my village, because I knew 100% that they would not abandon me if I am injured or killed.* Zelim, former Chechen combatant

As the war progressed groups composition could be in flux, after the war many of the groups were dissolved, most of fighters returned to peaceful life, however, some groups remained, and gradually turned into paramilitaries with stronger territorial component and personal loyalty to the leader.

During the war the popular support to combatants was enormous.

*People’s militia had to be fed, so women baked bread, sewed uniforms, and unloadings. Injured were taken care of. When a unit entered a village, injured were immediately taken homes – it was perceived as an honor to care for them. The rear was working. The entire nation supported us. We were fighting for a pure idea, for independence. And you cannot defeat a nation, when it has the idea. When one side has patriotism and the other side- vodka, it’s clear who wins such a war. In the first war the truth was on our side and we won with the support of the All-Mighty and the nation.* Ruslan, former combatant

In the post-war euphoria ex-combatants were treated as national heroes, and quite a few of them developed a superiority complex and felt they were entitled to their share of power.

6.2. Elections and attempts at initial elite consolidation

Chechnya started its second state-building project after independence with presidential and parliamentary elections of January 27, 1997 carried out on the basis of 1992 Chechen Constitution, the institutional design and principles of governance remained the same.

There were over 20 candidates running for presidency, no pro-Russian or non-separatist candidates were allowed to run. The actual rivals were three: Zelimkhan Yandarbiev, who took the Presidential position after Dzhokhar Dudaev was killed by the federal security forces in April
positioned himself as a supporter of Islamic values and was radically anti-Russian. Aslan
Makhadov, a former colonel of the Soviet Army, was the commander of the General Staff
Headquarters of the Chechen Troops during the war and signed the Khasav’yurt Accords on behalf
of Chechnya. He was for a secular democratic state, advocated normalization of relations with
Russia, and was in favor of attracting support and investment from the West. Shamil Basayev, a
celebrated field commander, and terrorist was an obvious leader of the radicals. Basayev became
famous in Chechnya already in November 1991, when in response to Yeltsin’s imposition of a
State of emergency in Chechnya he hijacked a Russian passenger plane to Turkey. He was
rebuked for this deed by the Ichkerian government and put on the wanted list by the Russian law
enforcement agencies. In June 1995, when his group seized a hospital in the town of Budenovsk,
in the Stavropol krai, Basayev demanded that Moscow start peace talks with Dzhokhar Dudaev.
After several unsuccessful attempts to storm the hospital, the Russian government announced a
cease-fire in Chechnya. Basayev released the hostages and returned home as a national hero (Aliev
and Zhadaev: 2005).

Aslan Maskhadov was the most ‘pro-Moscow’ candidate, for this reason the tough-liners did not
trust him.

_The Kremlin had obviously put its stakes on Maskhadov, because of that I did not trust him._

Shirvani, 46, Grozny

Most interviewed respondents from among former combatants and radical separatist shared this
view. Many respondents remembered the 1997 elections, which followed the Khasav Yurt
agreement as a very special civic experience:

_I have cast my vote only once in my lifetime. It was that day. So many people were voting! There
were queues at the polling stations. People were dancing. Everyone felt: the war was over, now we
would start a new, better life.’_ Tamara, 41, Grozny

---

On April 21 1996, the signal of his sputnik telephone was taken bearing of in the area of village Gekhi-chu.
Two Russian planes Su-25 with self-guided rockets attacked Dudaev, one of the rockets killed him at he moment
when he was talking with an MP of the Russian State Duma Konstantin Borovoj.
OSCE recognized the results of the elections. Maskhadov received 59% of votes, leaving all other candidates far behind. Second was Shamil Basaev, getting 23%, 5%. According to analysts of Chechen newspaper “Chechenskoje obschestvo, “most people voted for Maskhadov because Basaev frightened them by his aggressive military biography, while Maskhadov was the symbol of reasonable and secular authority (Aliev and Zhadaev 2005). Moreover, Maskhadov signed the Khasav Yurt agreement with Russia and many voters were looking forward to him resolving the remaining disputes with Moscow. The executive president Zelimkhan Yandarbiev got only 10%. Thus, according to Russian scholars Malashenko and Trenin, the 1997 elections demonstrated that “most Chechens wanted to avoid a new confrontation with Russian and favored dialogue”, as well as that over 30% of the population favored radicals. “These 30% of the electorate…soon became the core fighting force of the anti-Maskhadov opposition” (Malashenko and Trenin 2004:30)

There was low turn out for parliamentary vote, elections to the legislative assembly took place in two rounds, and even then only 32 MPs out of 63 constituencies received a due number of votes, so that the Central Electoral Committee of Chechen Republic Ichkeria had to review its decision and confirm the mandates of MPs in another 11 constituencies, thus creating the parliament of 43 seats.

Maskhadov swore in as the new President on February 12, 1997. According to the Constitution of the Chechen Republic he was also the head of the Cabinet of Ministers, the commander in-arms and the Chair of the Supreme Council with the President of the Chechen Republic.

Maskhadov’s choice of ministers clearly shows his priority to accommodate interests, avoid fragmentation within the separatist elite and share power with former field commanders. Thus, all of Maskhadov’s main political rivals were invited into the government – Shamil Basaev and Movladi Udugov became the first Vice-Premiers of government. Other two prominent commanders were appointed vice-prime ministers - for construction (Ruslan Gelaev), and social issues (Islam Khalimov). Maskhadov put field commanders or former members of Dudaev’s

---

75 The second one was organized on February 15 1997
76 Basaev responsible for industry and Udugov for information, press, and negotiations with Russia
government in charge of Ministries and governmental departments, Supreme Presidential Council, Security Council and the Presidential administration (Muzaev 1997).

At the same time Maskhadov realized the importance of experienced cadres, therefore he also invited former pro-Russian managers, which his more radical colleagues perceived as “rehabilitation of communists”. The Ministries of Energy, Labour and Social Issues, Road construction, residential property as well as Departments of State Property, National Bank were headed by representatives of the «old» bureaucracy (Muzaev 1997). Thus, the political elite in 1997 were selected on the basis of personal achievement, primarily in the military effort or in their adherence to the idea of independent Chechen statehood. No teip, vird, kin affiliations played a role.

The main fraction in the parliament were the MPs of pro-Makhadov’s party of national independence (over 20 MPs), second was the fraction of Union of political forces “Islamic order” – 7 MPs (Lukin 2007). Both the Chair of Parliament and his deputy were former field commanders. The Chair of the parliament Alikhadzhiev was elected with support of Makhadov’s allies (39 votes out of 42). Thus, Makhadov’s positions in the legislative assembly were strong and the parliament supported him on most issues throughout 1997-1999.

Maskhadov gave enough real power to all his former comrades, which should have satisfied everyone and cemented the political regime. One can speculate whether this was the right choice -staffing the institutions with former combatants, who usually had no due education, experience or knowledge of government was clearly risky. One can also wonder whether Maskhadov had a choice not to include them. Probably for Maskhadov, it was the only rational choice to keep them all under the auspices of his government than to have them outside the political system.

6.3. Regime challengers: formal opposition, informal groups

Despite Maskhadov’s efforts, tensions between field commanders were increasingly hard to conceal. The first one to openly challenge the regime was one of his rivals in the presidential campaign -Salman Raduev, a former prefect of the second largest town of Gudermes, then the
commander of presidential guard “Presidential Berets” in 1993-1996, who married Dudaev’s niece. On January 9, 1996 he repeated a terrorist act committed by Shamil Basaev- attacked a military base and airport in a Dagestani town of Kyzlyar and when retreating took hold of a local hospital, demanding a safe corridor to Chechnya. After Dzhokhar’s death, Raduev considered himself to be a logical successor to his relative, he renamed his group - the “Army of General Dudaev”, denounced the results of elections, refused to accept the legitimacy of Maskhadov and went into open confrontation with him. Raduev had well armed military bases in the town of Gudermes and in Staropromyslovsky district of Grozny.

The real political challenger to Maskhadov was not Raduev, however, who was popularly perceived as a rascal, but the charismatic radical Shamil Basaev, who lost elections to Maskhadov and received his defeat very painfully. Basaev, however, was strategic enough not to oppose Maskhadov immediately after elections.

The third challenger was Zelimkhan Yandarbiev, the executive President after Dudaev’s murder, who was also very much looking forward to dropping the word “executive” from his title. After the elections, Yandarbiev took a break and went on a several months long trip to the Muslim countries (probably to raise funds).

Other Chechen commanders allied with one or another actor, but many kept own armed groups, despite Maskhadov’s attempts to dissolve them after the war. Basaev’s and Raduev’s forces were major military formations, well trained and experienced in audacious military operations. Both groups together could militarily compete with the state armed forces. Maskhadov himself, did not have a personal paramilitary group, was relying on state security structures and a small number of faithful personal guards.

Apart from paramilitary groups the above mentioned political challengers set up formal political organizations to represent their interests in the public sphere. “Public-political movements” were established which functioned as one-leader political parties, and had own printed organs-newspapers.
In 1997 Shamil Basaev, founded a radical separatist party- “Marshonan Toba” – Way to freedom. In June 1998 following his failure as Prime-Minister Basaev organized a permanent “Congress of the Peoples of Chechnya and Dagestan” with himself as its chair (Malashenko, Trenin 2004:34). Salman Raduev- created a military-patriotic organization “Soldiers of Freedom” and later- “Caucasian house” (Muzaev 1997). Former executive President of Chechnya Zelimkhan Yandarbiev was elected the emir of Organization for Islamic Unity of the Caucasus in June 1998. The President also formed a public movement “Chechen Islamic state”, which supported him as the head of the state and called for additional credentials for the executive (Muzaev 1997) Newspapers “Caucasian Confederation” (Yandarbiev), Marshanan Az (Raduev, Basaev), “Way of Dzhokhar” (Raduev), “Way of Islam” and “Islamic nation” (Udugov), “Great Jihad” (Gelaev), were in opposition to Maskhadov.

Official newspapers Ichkeria (the organ of Chechen government), Zaschitnik Otechestva (organ of Ministry of Defense) supported Maskhadov, as well as the independent newspapers “Groznensky rabochij”, and “Golos Chechenskoj Respubliki.” Publications in these newspapers will quoted in the upcoming section.

Thus, all Chechen challengers were in official (formal) political opposition to Maskhadov, but their real strength was in their informal paramilitary capacities.

The ideological divisions between Maskhadov’s supporters and his opponents were the attitude to Islam, foreign and domestic policy. Domestically, all opposition leaders were pushing for Islamic state and enforcing Islamic mores. If Maskhadov was investing much hope in privatization as a mechanism for revival of Chechen economy, the opposition was very cautious and argued that there was a high probability for it to be carried out in the interest of specific groups, not the entire population. At the same time the opposition leaders did everything to pursue “informal privatization” or naked capture of state property by criminal groups. Maskhadov was focused on combating organized crime domestically, while the opposition called for combat with spies and
“collaborators of the occupation regime”. Opposition was very sensitive about any criticism of *sharia* judges.

In foreign policy, opposition blamed Maskhadov’s for an inadequate reaction to ‘cynical and insulting campaign against the Chechen state organized by Russia’, and demanded to settle the remaining issues with Russia as soon as possible on the conditions of full independence of Chechnya. Opposition demanded to introduce Chechen passports, customs at the borders with Russia, Chechen registration plates for vehicles. Maskhadov’s challengers were unhappy about the lack of government’s reaction to the world geopolitical processes – they called for interference in Dagestani political processes on the side of Islamist leaders, and for more outspoken anti-Western position in international affairs.

On top of these “indigenous” challengers there were two groups of “aliens”, who were hosted by the Chechen radicals and played a prominent role in the state-building project of 1997-1999. These were fundamentalist Islamic leaders – international Jihadist Khattab, who supported the spread of fundamentalism in Chechnya financially, logistically and militarily, and Dagestani Muslim scholar Bahhaudin Muhammad (Kebedov), who provided ideological support and training to fundamentalists and inspired transformation of Chechnya into Islamic state. Both men had own armed groups.

Khattab, a Saudi or Jordanian citizen, fought USSR in Afghanistan, then joined Islamists in conflict in Tajikistan and Uzbekistan. In December 1994, he learnt about Chechnya from a CNN reportage and already in January 1995 arrived to Grozny with a group of Arab supporters. Khattab brought with him the structure, skills and most importantly financial support of international Jihadists. He organized stable financial inflows for weapons, ammunition, training and supplies. As a professional guerrilla, with a masterful command of all types of infantry arms, land mining, mine cleaning and fight in the hills, he trained future combatants. In 1995-1996 Khattab carried out a number of successful military operations,\(^77\) which impressed Chechen field

\(^{77}\) most infamous one being the April 1996 operation near the village of Yarysh-Mardy, where in 3 hours he destroyed a military convoy of federal 245 motor-rifle regiment, killing 95 federal servicemen, injuring 54, and
commanders, but according to my respondents among former combatants, Dudaev, who was a consistent opponent of Islamism “kept him quiet”. However, when the Russian security services killed Dudaev on April 21, 1996 his deputy Zelimkhan Yandarbiev, had already been under a strong influence of fundamentalists. In 1996 Yandarbiev introduced *sharia* courts in Chechnya and gave Islamists political prominence.

Shamil Basaev as a military strategist also realized the organizational benefits of the fundamentalist structures and the efficiency of their mechanisms for generating support among youth. He became close with Khattab who channeled financial support to his group. In 1996 Khattab married a Dargin woman from Islamist enclave of Dagestan and settled in Basaev’s native village of Vedeno.

In 1996 with the help of Basaev, foreign Jihadists Khattab and Abu Fatq founded a training Center “Kavkaz” in the former *pioneer* camps near the village of Serzen-Yurt, in the Shali region of Chechnya. In almost three years the centre was attended by thousands of young people from the region. The teachers and instructors in the camp were mostly foreigners, according to my respondents; they had Dagestani translators from Arabic with them. Each camp had a specialized programs offering ideological training by studying of Koran, training in explosives and terrorist actions in the rear of the enemy, training in heavy artillery weapons, methods of guerrilla war. The training cycle took six month; the camp could reportedly take in from 1,000 to 2,000 people at a time. Thus, due to Khattab thousands of young people got access to a rather sophisticated and advanced ideological and military training in international Jihad, most of them became bearers of the fundamentalist ideology and some, indeed, turned terrorists.

Different people attended the camp –from rather secular intellectuals, who went out of curiosity or may be to learn something new about Islam, to radicals who joined with a clear agenda to destroying all the military vehicles. The operation was cunningly planned: federal convoy comprised of heavy armored military vehicles was caught on a narrow mountainous road, with steep mountains on the one side and abyss on the other. Chechen fighters led by Khattab attacked the head and the tail of the convoy, set on fire the vehicles on both ends, killed the commander in the first minutes of the operation, and then destroyed the rest in between, who were unable to move, being blocked by burning vehicles on both sides.
become fighters, but most of the attendees were idle, bored youngsters, for whom it was an adventure of a “zarnitsa”\(^{78}\) type, a free of charge vacation. Going to training was a sign of manliness and raised a young man’s status among his peers. One of my Ingush colleagues, a totally secular intellectual, said that at the time he planned to go as well, but to be enrolled he had to quit smoking that is why he reconsidered. Another respondent said that he went to learn about Islam, and after the camp he was very much looking forward to war. The existence of Center “Kavkaz” played a prominent role in strengthening of fundamental Islam in the North Caucasus and engaged in military-political struggle many of those who were otherwise disinterested in politics.

Below are two interviews with the attendees of the camp, one of whom fought in both wars, the other, a former communist party member, became a strongly “anti-Wahhabi” deputy chief editor of a regional newspaper “Gumsi”:

I was in the training camp of Khattab. There were up to 1,000 guys at the time... Everything was free of charge.
There were Bashkirs, Uzbeks, Tatars, Tajiks, Ingush, Kabardines, Ossetians, Afghans, and Englishmen there. There was also one black guy, a professional runner. He only knew English and Arabic, he came to fight. There was one guy from Bosnia, without legs, these were some real fighters there; they were wanted by all security services in the world. We were divided in Jamaats- there were Ingush, Kabardine Jamaats, the two latter were very united... After training in the first camp, the best were selected and transferred to the military camp. Guys from Russia were taught mining, explosives and the like... This was real military training, these people knew that there would be another war, they were preparing... They showed us videos of Kashmir, Palestine. I was shocked. Although now I think it was brainwashing... And there was no power in Chechnya, which could approach this camp and bark at them.

All the taxi drivers knew the way to the camp. We were passing checkpoints and the military servicemen knew where we were going. It was impossible not to know about this camp. But it was dangerous to touch us. Zelim, former combatant

After the first war we were in Serzhen-Yurt. We thought this was the place where people worshiped God. The first week some Jordanian was lecturing. Gradually I started to feel tension; I saw people’s eyes turning bloodshot. I thought this was some kind of hypnosis, they often repeated words – war, blood, murder. Then I told my friend- “something is wrong with this place” and we left. Khavas Akbiev, deputy chief-editor, newspaper “Gums.”

\(^{78}\) A sport – and –military game in the USSR. It was an imitation of military action, similar to military training. These games were part of military education at schools.
Fundamentalist influences came not only from Khattab and the Arab Jihadists he brought with him, but also from Dagestan. In 1990s Dagestani fundamentalist scholar Bahhaudin Muhammad founded a madrasah at the border of Dagestan and Chechnya which was attended by around 700 students, both Dagestanis and Chechens (Akaev 2006). In 1997, when the authorities of Dagestan managed to crash many of the fundamentalist centers on its territory, Bahhaudin Muhammad and his supporters with families made hijra (migration) to Chechnya where they were allowed to settle in the formerly pro-Russian opposition town of Urus-Martan (Akaev 2006). Bahhaudin trained judges for the Chechen sharia court.

Both Khattab and Bahhaudin Muhammad interfered in the Chechen politics from behind the scenes. Knowing the ambitions of Chechen leaders, they never voiced any personal interest in gaining political power; however, they consistently and forcefully pushed for Islamic state, for more aggressive behavior towards Russia and the West, for all-Caucasian and international Jihad. Both leaders regularly gave interviews to Chechen newspapers, most frequently to pro-fundamentalist newspapers “Islamic order” or “Al-Kaf” (the latter was sponsored by Khattab). In various interviews Khattab reiterated that his main life credo was Jihad, which was an obligation of every Muslim, he reiterated that he did not believe in the end of war in the Caucasus and called for getting ready for another war (IGPI 1998-1999).

Bahhaudin Muhammad and Khattab launched an offensive on Sufism in Chechnya. There was no law other than sharia and Koran was the Constitution. Nationalism was their foe. These latter theses were hard to accept for the majority of the population. Maskhadov and his supporters tried to curb the anti-nationalist claims of Islamists. Thus, Maskhadov’s close ally Lecha Khultzygov, the Director of National Security Service, announced in January 1998 that the propaganda of “wahhabists” directly contradicted the national traditions of Chechens, he condemned the enforcement of “Arab lifestyle” and feared that “replacement of national tradition by Islamic” will eliminate the distinct Chechen nation (Muzaev 06.1998). Maskhadov in the midst of his
latest political crisis declared that “Chechnya is for Chechens. We do not need…Arab advisors” (in Muzaev 06.1998).

The military formation of fundamentalists called “Jamaat” was a very well trained and organized combat-ready group. Some hostages taken for ransom were found on their bases. Dagestani policemen released from captivity in Urus-Martan claimed that fundamentalists dug trenches and were preparing for the attack of the Presidential troops. My respondents from Serzhen’ Yurt claimed that they lived in constant fear of armed clashes between Khattab and Maskhadov.

All Chechen challengers of Maskhadov administration resorted to Islamist rhetoric, but they were allies to fundamentalists, rather than converts. Demanding more Islam in the state was instrumental to a number of political ends. In the conditions of post-war chaos calling for religious purity and strict adherence to Islam was a handy moral position, which allowed boosting one’s own stand and discrediting the rivals. Thus, Salman Raduev in an interview to analytical magazine “Ogonek” in 1997 blamed Maskhadov for fighting for power, while he claimed that he fought for Islam. “I am a man of deep religious convictions, I do not drink or smoke” (Belovetsky 1997). According to Ogonek, all funds from the Global Islamic forum came through him. Maskhadov officially appealed to Muslim countries not to finance Raduev (Belovetsky 1997).

Zelimkhan Yandarbiev also openly acknowledged the instrumental value of financial support from the Islamic funds. In an interview to Vremya Novostey newspaper on December 2001, Yandarbiev said: “Islamic fundamentalism is not dangerous. It is partnership, international relations. You do not consider it a problem if Western investors tour Russia, do you? One cannot divide help into help from Wahhabists and help from others” (Yandarbiev 2001).

The last journalist to interview Shamil Basaev before he was assassinated in 2006 was a Radio Free Europe reporter Andrej Babitsky. In an interview to the Russian Newsweek Babitsky said that he was surprised that Basaev had not transformed into a complete Wahhabite and he claimed
that for him religious motifs were secondary – he fought a national liberation war (Babitsky 2005)

However, for young people who followed these opposition leaders, who went through the training camps of Khattab, Islamism was already in earnest. It was part of their life, which many of them sacrificed during the Second war, brought about by the 1997-1999 failed state building project.

6.4.1. Economy
The main problems of the republican economy in 1997-1999 was the dramatic decay in oil industry and lack of cash. In 1997 the gross domestic product amounted to 2 bln rubles (instead of the budgeted 5 bln) and in 1998 - 1, 6 bln (instead of the budgeted 7 bln) (Groznensky rabochij 10-16 June 1999). As a result Chechnya under-produced goods for 8,4 bln rubles, which had a negative impact on financing its state sector, education, healthcare, infrastructure, security, law-enforcement agencies and the military.

Most economic activity was concentrated in small private businesses – food stands, small cafes, shops, gasoline stations, selling crude oil products at the roadsides. Many of the field commanders turned their groups into military-economic units, which engaged in larger-scale illegal economic activity, including illegal oil extraction and hostage-taking for ransom. The radical opposition to Maskhadov was against official privatization of property, claiming that it would benefit just part of the society at the expense of the majority. At the same time with their consent and involvement, de facto privatization of state property by criminal groups resulted in squander of national treasures of the Chechen republic.

The following sections will analyze the efforts of the Chechen government to manage economy in 1997-1999.

6.4.2. Budget and tax collection
In the economic program of Maskhadov’s administration, oil industry was strategized as the main source for replenishing the state budget. Second profit generating budget line was taxes from legal entities (Ichkeria: 1998, № 13 June-July). The government did not expect much from individual tax payers and by 1998 stopped collecting taxes from individuals. In compliance with the Khasavyurt Accords, the state budget of Ichkeria was also filled with the financial inflows from Russia. Moscow was taking part of the responsibility for state-employed sector and pensioners, and had to finance reconstruction projects. Moreover, Russia paid Chechnya for transportation of oil along (the Chechen part of Baku-Novorossiysk pipeline) to cover costs of maintenance and ensure security of the pipe.

Nonetheless, soon after the peace treaty Russia imposed an unofficial economic siege of Chechnya. Moscow paid its part irregularly, partially and with delays. In late 1998 Russian transfers deducted Chechen debt for electricity supplies.

The problems with internal sources for replenishing the state budget were linked with deep crisis in oil industry, decay in other spheres of economic production, and tax evasion.

Since 1997 the Chechen oil industry gradually transformed from profit –generating sector to damage-inflicting (IGPI 10/1997). The Chechen government had to spend on maintenance of pipes and equipment, put out fires caused by criminals who illegally extracted oil naturally neglecting safety measures, invested enormous effort in securing pipes, but the profits from the industry were shrinking each month.

The general economic decay put most of the enterprises on the edge of bankruptcy; industry and businesses were simply unable to pay taxes. The burden of post-war reconstruction of premises and equipment, necessity to ensure own security significantly raised the cost of production. A large number of tax exemptions generously adopted by the Chechen parliament, which were often applied not only to those eligible, also significantly decreased the state capacity to collect dues. In post-war economy when everyone was short of cash many enterprises practiced barter deals, profits often were paid in kind, and financial transaction were carried out in cash.
bypassing bank accounts. The President and Parliament tried to enforce the governmental Resolution on Incassation” of July 24, 1997 with little success (Ichkeria: 1998, 18 January). In fact, the government, which was unable to support industry, had to tolerate barter. Tax police checked only those enterprises which were registered; however, most of the Chechen economic activity was shadow. Hundreds of enterprises and private businesses were not registered with the tax department, including some major firms. Muzaev quotes the results of check ups carried out in October 1997, which revealed 54 major construction firms, carrying out reconstruction of state objects being unregistered with tax service of the Chechen Republic. Armed groups who controlled businesses and enterprises also prevented tax collection (Muzaev 10/1997).

Since mid 1998 oil revenues reached the republican budget in very small numbers. Representatives of Russia and Ichkeria negotiated a 2 bln ruble Russian contribution to the Chechen budget in 1999; however, the Russian State Duma approved only 240,000, while the Federative Assembly ruled to stop all financial transfers to Chechnya (Ichkeria 1999, March-April).

6.4.3. Industry
As quoted above, the 80% of the republican economy was destroyed during the war (Tishkov 1998). Industrial enterprises were mostly closed; several factories survived but changed their profile. Most successful were furniture factories which used their industrial capacities for 10-15% (Tishkov 1998:65). A formerly major factory “Elektropribor” which before the war produced electrographic equipment converted to producing forms for baking bread and cap lids for jars and clothes- pegs (Tishkov 1998:439). The Grozny radio-technical factory “Sintar” converted to producing plastic boxes for storage, baskets for preserving vegetables and metal items. The workers received salaries in produce of the factory (IGPI 06/1998).
In the 1st three months of 1998 the industrial output dramatically decreased by 60% compared to the same time period in 1997 as a result of lack of funds for reconstruction and deficit of raw materials. But already in June 1998 the Grozny factory of iron-concrete products was relaunched, new concrete factory was open in the village of Novy Sharoy. A flour mill and sugar factories and a large battery farm were reconstructed in 1998. Over 3,000 additional work places were created as a result of re-launching these factories (IGPI 1998:06). Reconstruction of the cement factory in Chiri-Yurt was financed by the Russian government. In 1999 17 out of 44 major industrial enterprises were functioning, but their output constituted 5-8% of pre-war production (Tishkov 2001:439).

President Maskhadov invested much hope in privatization of industry, which to his mind was the only realistic mechanism to revive the Chechen economy. The state was unable to support enterprises in restoring their pre-war capacities, thus private owners had to come in. Discussions over privatization started in the summer of 1997 and became among main points of divergence for Maskhadov’ supporters and the radical opposition, and although the first privatization projects were announced in the summer of 1998, the official privatization process never started in earnest.

Since oil industry seemed the easiest way to generate revenue, Maskhadov’s government held it as a high priority and invested systematic efforts to enforce order in processing, realization and transportation of oil.

War inflicted damages to oil pipes in Chechnya of estimated 340 bln rubles. Largest processing factories in the capital Grozny were bombed out, oil was mainly extracted from fountain wells, because the pumping equipment was out of order- marauders stole the electric equipment and cables during the war.

Since 1996 the main damage to transportation of oil was inflicted by illegal in-cuts in pipeline for stealing oil and oil products. In February to August 1997, over 130 of such cuts were registered with over 30,000 tons of oil stolen (Groznensky Rabochij, 28 October 1997). Oil
products are stolen directly from the pipe or from the oil processing factories. Security companies were accomplices in such thefts.

Private gasoline stations and stands for selling illegally extracted petroleum products mushroomed. The authorities repeatedly banned such a trade, but in vain. Illegal gasoline suppliers sold fuel cheaper than registered gasoline stations. In the 1st six months of 1998 the state-owned gasoline stations sales dropped 10 times compared to the same time period of 1997. (IGPI 06/1998).

In December 1998 the oil processing enterprises stopped functioning due to mass theft of oil. 5-6 new in-cuts into the oil pipeline reportedly appeared each day. Thus, a 2 850 meter long pipeline from the oil base #2 to the Lenina oil processing factory had over 300 in-cuts. The pipeline was divided into sectors, controlled by armed groups; just a small portion of oil actually reached the processing factories. In April 1999 the officials of Chechen oil industry asked the government to introduce a military regime in the oil industry (Muzaev: 04/1999). Since July 1999 Chechen consumers felt shortage of fuel in gasoline stations. By then most of the gasoline stations had been importing their fuel from outside the republic, since Chechnya was no more able to satisfy domestic fuel demand (Groznensky rabochij 28 July-3 August 1999). Since June 1999 transportation of Azeri oil via Chechnya was also stopped.

6.4.4. Agriculture
The most stable economic sector in 1997-1999 was private farming. The association of private farmers of the Chechen Republic Ichkeria numbered 1,445 registered farms, and the share of private farming in the agricultural output of Chechnya was steadily growing. In 1997 the state agricultural enterprises in Chechnya numbered 59 state farms, however, the state-owned cattle was consumed during the war, the buildings of state farms were dismantled by local residents and used as construction materials. The cycle of land cultivation was not observed in the majority of farms, state agricultural enterprises were supplied with fertilizers and pesticides by
35-40%, the chemical weeding was carried out by 40%, and the enterprises lacked in fuel, agricultural machinery and qualified staff. As a result of lack of spares in 6 state farms only 58 out of 119 tractors were functioning, 35 trucks out of 83, 16 combines out of 23 (Ichkeria June-July 1998).

The government agricultural policy was to annually create republican coordinating centers aimed at assisting private and state agricultural enterprises. Headquarters “Crop-98”, “Crop-99” coordinated efforts aimed at providing farmers with seeds, fuels, spares for tractors, using the existing limited funds, barter options, securing humanitarian assistance. Heads of local administrations were concerned that agricultural machinery was increasingly out of order or stolen and land had to be cultivated “the forefather’s ways” – with oxen yoked in plough. As a result of lack of machinery and labor force fields remained neglected. Cattle-breeding, a traditional industry of the mountains experienced difficult times – almost all vets left the mountainous villages, which caused disease and loss of cattle (Groznensky rabochij, # 20, Grozny 1999, May 27-June 2).

6.4.5. Education and healthcare
According to the Annual Report of the Institute of Ethnology of the Russian Academy of Sciences, all central republican medical clinics, over 20 municipal hospitals and polyclinics, 83 educational institutions (university buildings, schools, kindergartens, vocational schools) were destroyed completely, 321 partly, 157,000 people injured and mutilated as a result of bombing (Tishkov 1998).

Lack of funds in the state budget most seriously affected the educational system. The government was unable to rebuild schools, thus in many villages children studied in refugee wagons. UNHCR had large scale reconstruction programs, restoring schools and medical ambulances in villages, including the mountainous villages. In 1997 alone, UNHCR spent 2mln
USD for reconstruction in Chechnya (Groznensky rabochij January 4-11, 1998), but they could not manage more than 20 villages.

Salaries to 13, 665 Chechen teachers were not paid for months unless transfers arrived from Moscow. The Chechen government tried to compensate teachers as they could, thus in October 1997 the teachers received part of their salary in sugar produced by now partly functioning sugar factory (IGPI 10/1997). Teachers planned to organize protest rallies in October 1998, however, postponed their action in the conditions of acute political crisis in the republic, when some of the field commanders demanded Maskhadov to resign. According to Tishkov, the teachers did not want to act as supporters of the radical military groups (Tishkov 1998).

The state educational policy in 1997-1999 was mainly focused on Islamization of the education process, minimizing the school curricular, and reducing the number of educational establishments. Thus, in January 1998 a number of subjects were temporarily excluded from the school curricular for the sake of economy, such as musical education, drawing, sketching, physical training, and a number of other subjects. New mandatory subjects were introduced by the Ministry of Education-Arabic, introduction to Islam, Chechen ethics, introduction to sharia and civic law. Islamic subjects were taught from elementary school, where tuition was to be carried out in the Chechen language. The government developed Islamic dress code for school children and was working towards separating female and male students.

In July 1998 the government decided to close the Chechen Pedagogical Institute as duplicating the Chechen State University and to transfer their material basis and staff to the University, having closed 5 departments and 36 sub-departments (kafedras) and reduced staff by 1443 people. 30% of vocational schools were reduced by the decision of government (IGPI 06/1998). According to my respondents at that time employed in education, around 1/3 of teachers had higher education in 1997-1999, education suffered from brain drain inflicted by the mass outflow of qualified cadre, thus the strategic task was to replace missing cadres with the newly educated
ones. Professors of Pedagogical Institute tried to explain this to the Chechen Government; but the policy to cut on education expenditure was nonetheless implemented.

Mountainous villages suffered most. Teachers moved on the plain seeking alternative employment. Heating systems at schools were out of order, which made classes in the fall and the winter almost impossible. Lack of income in families left children without warm clothes and textbooks. Each class (20-30 students) had to use 2-3 copies of textbooks. All the 32 schools were closed in Vedeno region as a result of lack of funds for heating and paying salaries for teachers. In other schools of the republic classes took place once or twice a week and lessons were reduced to 20-30 minutes (Groznensky rabochij 3-9 December, 1998). Eventually parents started to collect money to pay teachers themselves. By May 1999 secondary education became fee-paying, with a strict government provision that no child could be excluded from educational process if his parents were unable to pay (Muzaev 06/1999)

While secular educational system was in deep crisis, the authorities supported the creation of religious educational institutions: the Islamic institute in Kurchaloy educated 400 students; the branches of the institute were open in 8 other settlements of Chechnya. Grozny Islamic center established courses for children aged 10-13, where they could study Arabic, learn to read and translate Koran. These educational opportunities were free of charge (Golos Chechenskoj Respulbliki June 28 1998).

The 1994-1996 war had a tremendous detrimental impact on the health of the population and the republican healthcare. After the war, some of the hospitals were taken by military groups. Thus, the republican tuberculosis hospital was occupied by Sharia battalion, while the T.B. prophylactic centre alone was unable to satisfy the needs of the population. In 1998 the number of TB increased twice compared to 1994, mortality from TB- increased by three times (IGPI 01/1998).

Central maternity house in Grozny was hit during bombing and required reconstruction.
1997-1998 Chechnya experienced post-war baby boom. Due to lack of funds, in 1996-1997 50% of newly born children left maternity houses without vaccinations (IGPI 07/1998). In 1998 the Ministry of Healthcare adopted a special state program “Children of Chechnya” aimed at medical and psychological rehabilitation of children. The program, however, had no supporting funds to implement necessary programs.

Failing state had immediate impact on health of the citizens, particularly in urban centres. Decay of state services, and deteriorating sanitary conditions resulted in dramatic growth of acute intestine infections, which in 1997 increased by 43% compared to 1996. Experts attributed this development to the lack of equipment for purifying and chlorination of water, pollution of water and soils by numerous illegal oil processing enterprises, unsatisfactory conditions of sewage system, uncontrolled realization of foodstuffs (IGPI: 06/1998). The government tried to control the pharmaceutical supplies in the republic. The Ministry of Sharia State Security, and Prosecutor’s office controlled the legality and licensing of all medications sold in the Chechen republic (Kavkazskaya Khronika July 1998). No major problems caused by the quality of pharmaceuticals occurred in 1997-1999.

By 1999 immense pollution caused by illegal oil extraction and processing resulted in increase in diseases of respiratory diseases, which made up 77% of all illnesses in the republic. (Groznensky rabochij July 28-August 3 1999). The probability of cancer rose from 30 to 40% in 1995-1998 (Muzaev: 07/1998).

Healthcare system was virtually destroyed in the mountainous villages. Most of village ambulances were closed by mid 1998, midwives and veterinary doctors quit their jobs. (Groznensky rabochij October 28 1997). In 1997-1999 the mountainous villages felt dramatically the failure of state infrastructure.

No clear government healthcare policy could be traced from the available sources, accept for a high priority which the government gave to the treatment former combatants. The Ministry of Healthcare allocated funds and used their connections to send groups of former fighters to Arab
countries and Azerbaijani for treatment and prosthesis. “Support”, a special State foundation for participants of Russo-Chechen wars, was set up to solve the problems of healthcare and employment for former combatants, including creation of collective farms for former fighters (IGPI 10/1997). In the situation of high unemployment, the government found it important that field commanders helped their subordinates find employment and return to peaceful life (IGPI 10/1997). In other words the government delegated some of its functions to field commanders, who felt economically responsible for their rank-and-file during peacetime. According to Tamara Elbuzdukaeva, former dean of history department at Chechen State University, combatants were enrolled to the university without exams and created serious disciplinary problems in the educational process (interview 2005).

6.4.6. Armed forces
The official armed forces of the republic included the National Guard, the Anti-Terrorist center, military units of the Ministry of defense which were subordinated directly to the President of the Chechen Republic. There were also units of Ministry of State Sharia defense (sharia guard, Islamic regiment), national security service, and state frontier-customs troops. (Tishkov 1998). Armed forces of the Chechen Republic Ichkeria numbered 53 generals, one general per 300 officers (Muzaev, 12/1998).

In March-June 1997 Maskhadov tried to reorganize the command and the structure of the armed forces. On March 13, he founded the National guard, numbering 2000 people which was supposed to be the only regular armed unit (Muzaev 1997). In May 1997 Maskhadov abolished headquarters of fronts, which functioned during the war, organized a system of military bases of the Chechen armed forces and adopted the Statute of Armed forces (Muzaev 1997). In November 1997 the parliament adopted the Law “On weapons”, aimed to control circulation of guns. Nonetheless, a huge market of arms functioned in the center of Grozny. The demilitarization of the population had never happened; the field commanders in fact ignored
Makhadov’s reorganization efforts and orders to demilitarize groups. The groups remained and were transformed into personal guard of field commanders, local police or private security firms (Muzaev 1997)

6.4.7. Law-enforcement and capacity to maintain order
Criminality was the main problem of the Chechen state in 1997-1999. According to the official statistics, ratings of crimes went up to 60-70 crimes per week, including 1-8 murders. In the first 6 months of 1998 130 murders, 66 human abductions for ransom and 137 burglaries were committed in Chechnya (Tishkov 2001: 67). Theft of oil, illegal capture of property paralyzed the industry to such an extent that oil rich republic started to import fuel for domestic needs and state-farms were not able to fill the tanks of their tractors. Squander of oil resulted in permanent deficit of cash in the state budget which destroyed the republican system of education, healthcare, army and services. Hostage-taking and killings of hostages inflicted irreparable damage to the Chechen cause. Fraud with residential property, killings of non-Chechens in order to capture their flats, created another exodus of the Chechen population from the republic.

All the political forces recognized the problem of taming criminality as crucial to the very existence of the Chechen state. However, the sources of this social evil were perceived differently by the supporters of President Maskhadow and the radical opposition. Makhadov’s team recognized that crime was a domestic problem of the Chechen state and saw illegal armed groups and criminal gangs to be the main disrupting force for the Chechen statehood, while the opposition regarded flourishing crime to be a result of espionage and collaboration by part of the population with Russia; they put high priority on purging the republic from spies and collaborationists, pushed for adoption of law on lustration and strengthening of counter-intelligence work. The first Director of the National Security Service (Sluzhba natsionalnoj bezopasnosti - SNB), an agency responsible for combat of high profile organized crime, field commander Abu Movsaev was a close friend and ally of Shamil Basaev, and adhered to the latter
view. His agency was manned by ex-combatants, many of whom had questionable and even criminal past. They covered or sometimes participated in illegal activities.

In July 1997, Movsaev had to resign and was replaced by Maskhadov’s close supporter, Lecha Khultygov, a general of war, and a tough line combatant on crime, among the strongest figures of Maskhadov’s inner circle. Khultygov was the first to declare war on criminality and call ex-combatants involved in illegal activities- the enemies of the Chechen nation and state. Khultygov purged SNB of criminal elements and introduced public executions of criminals (IGPI 06/1998). Another Maskhadov’s close associate and tough liner on domestic crime headed the Anti-terrorist center.

President Maskhadov personally supervised state law-enforcement activities, which developed in three main tracks: combat on oil theft, combat on hostage-taking, combat on drug trafficking and production of drugs.

A special commission within law-enforcement agencies of Ichkeria was set up aimed to combat the theft of oil. The Chechen government involved regular armed forces, the special battalion of the Department for Security of State and police to units to confront illegal oil dealers, several times in 1998-1999 Maskhadov called for former-combatant reservists to support his efforts in taming the criminal gangs.

The state policy on combat of crime involved routine measures along with special “campaigns” – raids on criminal formations which usually mobilized almost all of the republican security services.

A first round in a series of campaigns named “The Shield of Legal Order” was launched in late May 1997; the next was carried out already in June in response to abduction of Russian journalists – three correspondents of NTV channel and two reporters of TV Company “VID”. Joint units of security forces checked all transport in the main thoroughfares of Grozny, searched all vacant buildings and basements, special groups carried out checks in villages, including those high in the mountains. The journalists had not been found, but security services released six
other hostages, taken for ransom, detained three people wanted for murders and arrested several suspects in burglary and thefts (Zapodinskaya 1997).

Maskhadov administration was well aware that the criminal groups were linked with the main regime challengers - radical opposition groups. Small gangs had patrons among major field commanders and their larger armed formations. Thus, each round of “Shield of Order” was accompanied with attempts to dissolve major political-military armed groups. The first of such raids against organized crime coincided with Maskhadov’s decree on dissolving the “Army of Dzhokhar Dudaev” led by Raduev and another armed group regiment of special assignment troops - “Borz” (Wolf) headed by colonel Bakaev. The Prosecutor’s Office instigated a number of criminal cases against former combatants in connection with human abductions and illegal violence (Nezavisimaya Gazeta, June 17 1997).

In December 1998 Chechnya was shattered by the most insolent and notorious crime of 1997-1999 the murder of four engineers of the British company “Granger Telecom”. Three Englishmen and a New Zealander arrived to Chechnya to install telecommunication equipment on the invitation of the Chechen government and were abducted on October 3. In early December 1998 their cut off heads were found, and the Russian security services received a VHS tape, where the captured foreigners “confessed” to being the British spies. This brutal crime had a wide international resonance, and was qualified by the UN Secretary General Kofi Annan as “nightmarish and inhuman” (Commerseant 12 May 2001). Murder of engineers was a dramatic blow to the Chechen cause and the credibility of the incumbent government.

The results of the “Shield of Legal Order” in December 1998 were more than impressive- 596 people were detained, including 78 wanted criminals, several hostages had been released. (Groznensky rabochij 3-9 December, 24-30, December 1998).

The Chechen law-enforcement agencies were confronted with organized crime, involving large and well armed groups with significant resources. Thus, in June 1998 the Prosecutor General of the Chechen Republic Ichkeria instigated a criminal case into illegal capture of oil wells
belonging to “Grozneft” by an illegal armed group of around 200 people (IGPI 06/1998). These groups were prepared to defend their economic interests militarily, while Maskhadov was still cautious to start spilling the Chechen blood. As a result his law-enforcement agencies were inefficient when confronted with aggressive armed criminals. For example in August 1998 the special battalion of the Department for Security of State objects supported by police units suffered a major defeat by failing to gain control over two oil wells illegally captured by fundamentalist armed groups. (Golos Chechenskoj Respubliki 18, 20 August 1998). Security services limited themselves to issuing warnings and trying to regain strategic objects through negotiations with criminals.

Anti-terrorist center and regional units of State Sharia Security confronted the organized drug business and carried out raids to discover plantations of poppy and hemp in the Chechen mountainous and pre-mountainous areas. Hectares of narcotic fields were regularly discovered and destroyed in the forests of Chechnya (IGPI: 06/1998).

Objectively speaking, results of law-enforcement agencies were quite impressive, but still insufficient for taming the criminality. Security services were paralyzed by inability to resort to violence. By 1999 the situation started to change, reports on armed clashes between criminal groups and police forces regularly appeared in the republican press.

By mid 1999 Makhadov’s team managed to consolidate national and regional forces in combat of crime. All commanders of security and law-enforcement agencies were mobilized and lived in the barracks. In the framework of another anti-criminal operation in June dozens of hostages were released.

In 1999 the Presidential administration actively involved local governments in operations against armed groups. Thus, in June 1999 Maskhadov created a Regional Sharia committee #1, which united officials of eastern Chechnya (4 regions), formed loyal to him sharia units in settlements.

---

79 For example, in April 1999, in an armed clash at Anisimov Oil Processing factory, two people were killed, several more injured and 9 policemen disappeared without trace (Parlament, 1999, №2. April 12).
appointed local mullahs and imams from non-fundamentalists (IGPI 06/1999). Similar coordinating bodies were emerging in other regions of the republic.

Some achievements of law-enforcement are exemplified by statistics. According to the Prosecutor General of the Chechen Republic, in 1997 3,558 crimes were committed in Chechnya, 3083- in 1998. In 1998 the Prosecutors office had 3824 criminal cases instigated, which were 825 cases less than in 1997. 55. 8% of crimes were investigated in 1998, compared to 41, 8 in 1997. However, only 20, 1% of the murders were investigated in 1998; investigating hostage taking was even less successful (Groznensky rabochij April 1-7 1999).

6.4.8. Judicial system
In 1997-1999 Chechen judicial system was based on Islamic law. The transition to Islamic jurisdiction happened upon decision of the ruling elite, without consent of the population.

The main problem of Sharia judicial system was low qualification of judges, which was not surprising since the republic had to almost at once staff courts at three levels with new cadres, without previous training or time for transition. Short –term courses for judges were set up, where the Dagestani fundamentalist leader Bahhaudin Muhammad trained usually young people with no background in law. Until June 1 1999 sharia courts used criminal codes of various Muslim countries, including the Sudanese Criminal Code (Akaev, interview 2008). On June 1 the Parliament adopted the Criminal Code of Ichkeria. (Muzaev 06/1999).

6.5. Political Crisis and Government’s response
The attribute “weak” is the most commonly used to characterize Maskhadov as a politician by experts, combatants and the population. I have hardly ever met Chechens (outside the incumbent government) who had very strong negative or positive feelings towards Maskhadov, but most of them characterized him as “weak.”
Maskhadov had a good reputation and was respected by various combatant groups, but unlike Dudaev, who was a recognized, unquestionable leader, he was one of many outstanding field commanders during the war and the others had a difficulty to accept his authority above them:

*Maskhadov as a president and as a person was a far cry from Dudaev. You know how Dudaev talked to the guys like Basaev and Gelaev? He scolded them: “You don’t fulfill the tasks! I don’t see any movement, you are giving up positions!” They all respected him, because he was clever, because he knew better. He had taught them everything they knew in combat science - E.S./. For all of them he was the authority.* Salambek, former combatant

*Maskhadov was a good person, but very weak. His main mistake was to become the President. When the war was over, they should have united and elected one candidate /from field commanders- E.S./, but Basaev decided to divide the people. He thought he was the national hero. I think Basaev resented that he was not elected.* Khozh, former combatant

When evaluating the success and failure of the Chechen state-building project of 1997-1999, it is important to bear in mind both the *ancien* regime conditions and the priorities set by the ruling elites. The state-building project of 1997-1999 was preceded by a very destructive war, which at the same time was victorious and produced a number of ‘national heroes’, each of whom felt that he had to be rewarded by getting a chunk of state power. The political status of the quasi-independent Chechen state was not settled, moreover, no country had recognized its independence, so military mobilization was tolerated.

The main goal of Maskhadov’s government repeatedly verbalized by him and members of his inner circle was to avoid internal schism and in fact civil war. Maskhadov was confronted with armed groups, which captured the society and used Islam as an instrument of political struggle and fund raising. Keeping the example of Tajikistan and Afghanistan in his mind, Maskhadov was well aware that these groups, rather than the society were shaping the political future of his country, but if a civil conflict broke out between them it would tear apart the entire nation, since then the issue of blood feud would come into play. Having the support of the majority in the society, Maskhadov did not make use of this support until the very end, when he felt that the society’s patience toward Islamists and criminals was already testing its limits. Until then he preferred to deal with his armed challengers on his own, without involving large groups of people.
Maskhadov also understood that a civil war in Chechnya would be used by Russia as a pretext to invade. He was thus not prepared to take the responsibility for starting either the first civil war among Chechens, or the Second Russo-Chechen war.

Thus, Maskhadov’s strategy was to keep even sham agreement between field commanders primarily by means of concessions. He gave informal groups access to power, and by February 1999 satisfied all their political demands, including the transformation of Chechnya into an Islamic state. At the same time, he made a few tough offensives on radical opposition – every armed challenge by radicals was dealt with militarily, which was usually followed by political concessions, restoration of consensus and when the opposition felt politically defeated, he would quickly implement important state-building reforms, which they opposed - re-organization of the army, purging personnel of security services from criminals, introducing educational qualifications for policemen and judges, returning legislative credentials to the parliament, rehabilitation of Sufi tariqas.

Thus, as a politician Maskhadov was quite successful – by mid 1999 the radical opposition realized that they had not much left to gain in Chechnya and accepted his moral authority. He beat them politically, but did not expect they would turn their eyes elsewhere and after all attack Dagestan. As a statesman and military person Maskhadov certainly failed, being unable to create a unified social space where laws would apply, authorities be respected a working economy and state order would be in place. In what follows I analyze the main stages of the political crisis in Chechnya, which resulted in final collapse of the Chechen state caused by the break-out of a new round of military confrontation.

As mentioned above, the radical opposition led by Salman Raduev, the commander of paramilitary “Army of Dzhokhar Dudaev” started to challenge Maskhadov right after the elections. Raduev criticized Maskhadov for compromises with Moscow, for including old communists in the government and insufficient Islamization of the public life. He carried out numerous
demonstrations, parades and rallies where he criticized the incumbent government, and threatened “to take action”.

In June 1997 Raduev was joined by other field commanders, who attacked Maskhadov for “rehabilitation of collaborationists”. Radical field commanders (Basaev, Gelaev and Movsaev) left Maskhadov’s government. Just four months after the government formation, elite consolidation was broken. At this stage the schism was ideological and limited to public critique.

Pressure on Maskhadov continued till the end of the year and in late December 1997 he made his first serious concession to radicals—appointed Basaev the Prime-Minister of Chechnya, and transferred most of the executive powers to him. Basaev promised to tame crime and solve social problems, however, already by June 1998 his government failed.

The main result of Basaev’s activity as a prime-minister was prominent advancement of Islamists values in Chechnya. By 1998 fundamentalists started to aggressively establish Islamic morale and laws in the towns and villages. Criminality did not concern them, they were focused on mores:

*I had a cafe, where my wife and my relative worked. After the first war, they ran up to my office and shouted that bearded guys broke into the cafe with guns. I rushed there. They did not find any alcohol. But they screamed: Who is this woman? What kind of relation do you have to her? I said- this is my wife, and this is my relative. Why are these women working here? Women are not supposed to work in places where men go to. We give you two days; unless you solve the problem we will burn your cafe.* Khavas Akbiev, deputy chief editor of newspaper “Gums”, Gudermes, Chechnya

During Basaev’s leadership, especially in spring 1998 the problem of hostage-taking for ransom became extremely acute. Some hostages were found in fundamentalist centers, moreover, fundamentalists found quotes in Koran, which justified hostage taking of the infidels for ransom.

In March Maskhadov’s Anti-terrorist Center tried to attack the fundamentalist base in Urus-Martan, but failed to either destroy the base or release hostages. In the end of May, as the situation in the neighboring Dagestan was deteriorating and radicals increasingly called for military intervention on behalf of the Islamist brothers, Maskhadov took another firm stance
against intervention, moreover, two fundamentalist security Ministers had to leave his government. The supporters of fired ministers got together and made a raid on Maskhadov’s native village of Alleroy. They harassed a few women and shot a man from Maskhadov’s teip. Government forces chased fundamentalists and clashed with them in the town of Gudermes. Almost two thousand people participated in the fight, among them Chechens, Avars and even Arabs. The oral agreement was not to use guns, to avoid blood feud consequences. “During several hours of the most brutal fighting only one shot could be heard – Maskhadov’s guard was injured, who knocked Wahhabists off like sheaves” (Vlast 30 June 1998). This was the first violent clash between groups, until this point unarmed, but massive in number of its participants. This was a signal to the President: the armed clashes were close.

After the Gudermes fight in protest against Maskhadov’s assertive measures “against the comrades in the resistance” Basaev filed his resignation. Just before that he was severely criticized in the parliament for failing as the head of the government (Muzaev 2004). This was Maskhadov’s political victory- his main challenger who had been given as much power as he wanted (accept for the Presidential status), he had failed and this way lost credibility to criticize the President especially for dealing with social problems and crime, which was the latter’s most vulnerable point. After the Gudermes clash Maskhadov’s forces established control over all state objects in Grozny (Muzaev 2004). A temporary peace was restored.

Following his failure as the Prime-Minister and with his heroic image rapidly fading away, Basaev became increasingly involved in Salafi political projects. In June 1998 he organized a permanent “Congress of the Peoples of Chechnya and Dagestan” with himself as its chair. The idea behind the Congress was to revive the Islamic Imamate of Imam Shamil in Dagestan and Chechnya (Malashenko and Trenin 2004:34). Clearly, Basaev’s aim was to hijack the state from his rival, even by creating a new political entity- union of Chechnya and Dagestan with him as a new Imam Shamil.
The peak of the crisis came in mid July. In July 14-15 1998 the National guard tried to disarm fundamentalists groups in the town of Gudermes. In an ensuing clash several dozens of people were killed, many more injured. It turned out that fighters of two governmental units – the Sharia guard and Islamic Regiment fought on the side of the Islamists, which indicated that the fundamentalists captured significant part of armed forces (IGPI 07/1998). Two days later Maskhadov made his first tough public statements against Wahhabists. He mobilized his supporters among reservists ex-combatants and demanded that the leaders of fundamentalists leave the republic within 24 hours. He also dissolved the Sharia Guard and the Islamic Regiment. On July 23 there was an unsuccessful attempt on Maskhadov’s life, which was attributed to Islamic radicals. The Prosecutors’ office summoned leaders of opposition for interrogation in connection with this case. The opposition (including Basaev) fearing public disgrace announced support of Maskhadov.

In the fall Maskhadov made new concessions to opposition and agreed to adopt “The Law on Lustration” and set up honor courts for its implementation. Another political principle of Maskhadov’s government was sacrificed in the name of sham consolidation.

On December 8, 1998 as the world saw the horrifying pictures of cut heads of four British engineers; Maskhadov again mobilized the reservists and carried out another anti-criminal campaign. Opposition responded with terror and made attempts on the lives of several Maskhadov’s allies. Field commanders Basaev, Raduev and Israpilov appealed to the Chechen Parliament and the Sharia court demanding that Maskhadov be impeached (Malashenko and Trenin 2004:33).

Chechnya became a polyarchy. The population, including former combatants was bitterly disillusioned and frustrated:

*When the first war was over, the people, whom we, the rank-and-file, made heroes- they all received state positions. They received them according to their merit... but started to act in their own interest. The idea, for which the people had suffered, in which it had invested so much effort, it was betrayed.* Ruslan, former combatant
On February 3 1999 Maskhadov decided to overtake the slogans of radical opposition and announced the introduction of “full sharia rule” in Chechnya and set up a special governmental commission to develop the new project of Sharia Constitution of the Chechen Republic Ichkeria. In the Sharia state the parliament had to loose its legislative power and to act as controlling institution, while the higher legislative organ was to be Islamic Council- the Shura – made up of prominent field commanders and Islamic scholars (IGPI 2/1999).

Opposition was taken by surprise and totally disarmed. Maskhadov had satisfied all their demands. Basaev immediately declared his full support of the president. However, the Khattab-sponsored fundamentalist newspaper “Al-Kaf” announced that creation of Shura and Islamic rule was a hypocritical political maneuver aimed to blunt Muslim’s vigilance. Few days later Basaev and his supporters made a statement that they would not join Maskhadov’s Shura, and created their own Shura with Basaev as its Emir (Chair) (IGPI 2/1999).

The Parliament which had previously been very supportive of Maskhadov announced the introduction of sharia rule unconstitutional, and violating the basis of the Chechen state, created a commission for the impeachment of the President for violations of the Constitution and his attempt to dissolve the highest legislative institution (Groznensky rabochij 25 February –3 March 1999). The parliamentarians refused to give up on their legislative credentials.

As a result of this final concession to the opposition, Maskhadov both won and lost. On the one hand, he managed to show the population the real face of his challengers- it was not Islam they were fighting for, but power. On the other hand he abolished the basis of statehood which was also the basis of his legitimacy - the 1992 Chechen Constitution, the institution of direct popular vote, and secular executive power. Moreover, he further alienated his supporters- especially the Parliament which had been loyal to him throughout 1997-1998.

Nonetheless, Maskhadov still enjoyed significant support, and those who supported him understood the maneuver, and wanted him to go further in ousting the radicals. On March 15 a large rally of Maskhadov’s supporters gathered in the centre of Grozny, which reportedly
numbered up to 50,000 people (IGPI: 03/1999). On the 21 March and 10 April there were unsuccessful attempts on Maskhadov’s life, which mobilized his supporters even further.

By April Maskhadov made two vital steps which strengthened his power- managed to reach consensus with the parliament by returning it the legislative credentials and assigning them to make cosmetic changes to Constitution adding quotes from the Koran and Hadith, and carried out a major reorganization of security services. In addition Maskhadov started to increasingly mobilize public support. His slogans of getting rid of shameful crime and Arab advisors who destroyed the Chechen nation were resonating deeper and deeper (IGPI 03/1999). In many villages militias and public councils were set up loyal to the President, which aimed to keep those who contradicted the Chechen traditions, incited distemper, divided Muslims and challenged the President out (Groznensky Rabochij 1-7 April 1999).

By April the activity of opposition was finally neutralized. Even Zelimkhan Yandarbiev, the most radical ideological challenger of Maskhadov called for compromise with the President (IGPI: April 1999).

Thus, by the summer of 1999 Maskhadov controlled most of security services in the republic silenced formal opposition via accommodation and achievement. He improved the quality of security forces and judiciary system by purging cadres, which transformed in modest success in taming of criminality. He was unable to dissolve the informal opposition combat-ready groups, to revive economy or at least the oil industry, which would have given him resources to sustain state sector, infrastructure and courts. Maskhadov as a politician won, Maskhadov as a state-builder failed.

When all demands of the opposition were finally satisfied and yet they did not achieve their main goal, namely the supreme power in the state, Basaev, Khattab and the Dagestani Islamists attacked Tsumadinsky and Novolaksky regions of the neighboring Republic of Dagestan in August 1999 to support their “Muslim brothers” in the fight against infidels. In response, Russia started the second war in Chechnya.
All the combatants I interviewed strongly disapproved of Shamil Basaev’s excursion into Dagestan.

_This was such a terrible mistake to go to Dagestan! They gave such a tramp card to Russia! Later Shamil tried to explain himself, saying that they /Russia- E.S./ anyway planned it and they would have anyway invaded, but he was given 16-17 mln dollars to get ready for war. So in order not to loose this money he went. But I always thought, Shamil, you had to understand, that one thing if they attacked first and another thing if we did it! How could we expect any support to our cause after that? But he cared less. Honestly, I have never wished death to any Chechen, but when I learnt that he was killed I felt malicious joy and revenge. This man pushed our nation to the abyss. And I voted for him in 1997…_ Ruslan, former combatant

_We were not able to preserve our patriotism, our victory. We defeated the Russian soldier and went home. But instead of creating and multiplying we started to destroy. That is why the second war was the Allah’s punishment._ Salambek, former combatant

The failure of 1997-1999 state-building projects should be attributed to the incapacity of the Chechen government led by Maskhadov to subdue opposition and paramilitary groups, who challenged the regime, turned the political process into perpetual a struggle for power. Criminal groups, linked with or part of these paramilitary groups squandered the state property and paralyzed the republican oil industry- the main budget forming sector of the economy. Inability to fill the budget almost destroyed the already shattered educational system and healthcare, infrastructure, and transport. The infrastructural power of the state reduced to almost nil. Unlike the 1991-1994 state-building project, when mountaineers did not feel the state failure that much compared to the residents of the plains, during the 1997-1999 the mountaineers suffered most – schools and medical institutions were closed, and land cultivation returned to the “forefather’s ways.” _Sharia_ became about the only product the state was able to deliver.

6.6.1. Paramilitary groups
Paramilitary groups strongly linked or even merged with criminality was a new pattern of social integration previously unknown in Chechnya. Most of the paramilitary groups positioned
themselves as formal political forces (political parties), had their printing organs (newspapers), but in essence remained armed groups. The social make up of the paramilitary groups was heterogeneous; the nature of cleavage between them was power struggle, framed as an ideological divide.

The core of many groups were former combat comrades, but gradually groups became based on personal connections, friends, relatives, co-villages. In the peacetime, their main activity was political-economic, and when it came to resource distribution, social composition of groups changed towards more ascriptive ties.

6.6.2. Religion and ideology
The emergence and vigorous dissemination of the new religious trend- fundamentalism or Salafism created a deep schism between Sufi and fundamentalist leaders, which remains very acute until now. Islamists who dominated the public space in 1997-1999 opposed the traditional Chechen virds; therefore the political role of tariqas was next to nil almost until the breakout of the Second war. Only in late 1998, when the anti-fundamentalist opposition started to strengthen, vird leaders joined who resented their subjugated position and felt threatened by fundamentalist attacks on their way of religious practice. Akhmad-Khadzi-Kadyrov, the Sufi mufti of Chechnya was the most outspoken opponent of Wahhabism since 1998; he called fundamentalists “the enemies of Islam” and demanded their deportation from Chechnya. There were several unsuccessful attempts on the life of the mufti, which did not stop him from defending his religious convictions.

Maskhadov worked with Kadyrov, but they had not become close allies. Maskhadov’s close relative told me in an interview, that the President personally did not trust Kadyrov and they were never close.

Islamists tried to erase not only vird divisions, but also nationalism. Political nationalism, the driving force of Dudaev’s revolution, state-building of 1994-1996 and the 1st Chechen war was hijacked by Islamist slogans. Maskhadov was a national Islamist, and secular nationalists did not
dare to expose themselves in the public space. However, Islamists failed to eradicate national identification even among the trainees in their camp of Khattab, where were ethnicity-based (Ingush and Kabardine) Jamaats. Paramilitary groups, which challenged the regime by framing their demands in Muslim discourse, were successful in Islamization of the State, of public sphere and of youth.

6.6.3. Regional opposition
In 1997-1999 the city of Urus-Martan again had a “special” position, but this time was not pro-Russian, but pro-Islamist. According to my respondents, several factors were conducive to such a development: 1) “betrayal of Urus-Martan by Russia” 2) Maskhadov’s desire to control anti-separatist Urus-Martan by allowing Islamist leaders and military bases to be set up there. 3) Prosecution of pro-Russian elites after the withdrawal of the Russian troops.

During the war Urus-Martan maintained neutrality. Neither federal forces nor Dudaev troops entered the city because we had our own guards and defended the city. At the same time, both sides in the war perceived Urus-Martan as a safe haven, injured fighters and federal servicemen were brought here and provided medical aid in the hospital. After the withdrawal of the Russian troops, Urus-Martan was taken over by Maskhadov troops. In 1996 our leader, Yusup Elmurzaev, was killed. After Urus-Martan lost its leader, people were disoriented; they were tired of combat and left alone against this armed armada. A law on lustration was issued, everyone who worked in pro-Russian institutions were fired, including the cleaning ladies. Former oppositionists were arrested, thrown in cellars, beaten, and subjected to torture. In order to protect themselves, many joined Islamists XX, member of local administration, Urus-Martan

My respondents remembered that Islamist groups established themselves gradually, almost unnoticeably, but by 1997 they firmly controlled Urus-Martan. It was not possible to resist their power:

There was a local family of Akhmadovs, they had nine brothers one of whom fought in Afghanistan and then in Abkhazia with Basaev. They joined Islamists and invited them into the city. The Islamists set up their bases in administrative buildings, at a boarding school. Maskhadov supported their resettlement in order to control Urus-Martan from rising against the regime. The Islamists from all over moved here, they had money, they bought houses, they were from Dagestan, from the Arab countries. They got married to local girls. Then started these veils, black dresses for women… At some point there were checkpoints at the entrances to schools, checking the dress-code…On the basis of schisms between Wahhabists and supporters if traditional Sufi Islam there were conflicts within families. Families were falling apart; people would stop talking to each other, for example, brothers and cousins. There were so many fights
over this and even cases of murder. A son killed his father for not accepting Wahhabism. XXX, journalist of a local newspaper, Urus-Martan

My respondents noted that Islamists mostly stayed at their bases, while the population continued living their own ways, taking some basic precautions on the surface.

We had a wedding of my nephew, a regular wedding with alcohol and all that. One of our neighbors came in and noticed that some people were drinking. When he was leaving, he said: I am going to report it to the sharia police. I said: “Go ahead, just try to do that. I’ll see how you will come back and live here among us”. He left, but never reported. XXX, journalist of a local newspaper, Urus-Martan

Thus, religious cleavages divided the political elites, neighbors and even individual families. At the same time, Chechen communities used to living under politically repressive regimes, accommodated on the surface and preserved their usual lifestyle inside. The clearest example was the Urus-Martan region, which had a “special position” again in 1997-1999, due to the choice of its politically active members to host Islamists.

6.6.4. Teip, seniors, kinship
In February 1999, a famous Chechen businessman and public figure, Khoz-Akmed Nukhaev put forward a declaration “On the basis of organization of state institutions in Chechnya”, where he proposed to organize state institutions of the basis of teip system, with the highest authority of Mekhk-Khel (Council of Land), Head of the state- popularly elected Mekhk-Da (Father of state), Supreme legislative council (Lor Is) comprised of representatives of nine Tukhums (unions of teips). Nukhaev considered that a government system based on national institutions would guarantee the state sovereignty of the Chechen people and ensure national consolidation of the society (Groznensky Rabochij 23 January –3 February 1999).

The idea of creating institutions based on traditional structures resonated with some nationalists, particularly the nationalist party “Nokhchi” (Chechens). According to the party’s leader Pashaev “in teip everyone is responsible not only for himself, but also for the teip, and the teip is responsible for each of its members”. Teip-based government according to Pashaev, would tame criminality, and enhance responsibility of political leaders (IGPI 04/1999). The party “Nokhchi”
was about the only political force which actually reacted to the proposal, that was otherwise not discussed by any political institution or group. The party itself was rather marginal, and today many of my politically active respondents of that time could not even remember that this party existed or what was it about.

According to Timur Muzaev, the idea to design teip-based system of government was an attempt to find alternatives to sharia rule and the “Arabization” of Chechnya (IGPI 04/1999). This project however, was limited to a discussion within certain traditionalist nationalist circles and was not treated seriously by major political forces, institutions or parliament, which suggests that the idea sounded utopian and unfeasible to the key actors of the political process. The main fault of this project was that it was based on a wrong assumption- that teip was still responsible for its members and individual member was accountable to his teip. If this were the case, such a tremendous criminality would not have taken place in Chechnya in the first place.

The remnants of Dudaev-time teip self-organization displayed itself once, when a delegation of representatives of teips visited Maskhadov and offered him support. A Chechen ethnologist, Said-Magomed Khasiev, recalled:

*After his election a delegation of representatives of teips, people thinking about the fate of the state, both senior and young came to Maskhadov and said: all these brigade generals, their headquarters should be liquidated, everyone should take ladders and axes and work. “If you cannot stop them, we will” – they said. “These are my combat comrades, my friends, we were fighting together, I cannot do it” was his response. He did not clean up the political system, this was his main mistake. Said-Magomed Khasiev, Chechen ethnologist*

The role of Elders in the state-building project of 1997-1999 was almost negligible. They were not visible in the public space, not organized in any way or paid any special respect. Even at the level of local government, elder’s role had dramatically decreased. This development was convincingly explained by Ilyas from a mountainous village of Shatoy:

*When young people are with arms in their hands, they do not ask Elders for advice. Leaders from among youth started to be distinguishing themselves and they took control over villages. Ilyas, 35, Shatoy*
Blood feud played a very prominent role in the political processes of 1997-1999. Maskhadov’s notorious “weakness” was a result of his caution to start series of blood feuds in Chechnya, including acquiring personal blood foes. The inefficiency of Chechen security services and troops in combat on oil thieves and hostage-takers was also a result of vendetta considerations. The Gudermes fight of May 1998 was a spectacular example of the mechanism of blood feud at work: up to two thousand people, most of whom possessed guns, engaged in a most brutal fighting putting their weapon aside. By 1999 armed clashes between the government forces and criminals started to happen routinely, which can be seen as the beginning of the process of erosion of the institution of blood-feud in the name of the indigenous state.

6.6.5. Political elite formation: kinship and personal networks

Maskhadov’s cadre policy likewise to Dudaev’s was not teip- or kinship- centered, but based on ideological /programmatic values (Islamic nationalists) or other political considerations (eg. necessity to accommodate opposition). The only member of Maskhadov’s inner circle, who was his relative, was his second nephew Turpal-Ali Atgeriev, the Minister of Defense; there were also relatives in his personal guard. Minister of agriculture was alleroy teip. Given the fact that alleroy is one of the two largest teips in Chechnya, they were not overrepresented.

He did have the support of alleroy people. But if he listened to the respected people from the teip, there would not have been such an anarchy. He ignored all recommendations, had not followed a single reasonable advice given to him. For Maskhadov teip had no relevance whatsoever. He was outside the teip framework. Said Magomed Khasiev, Chechen ethnologist, senior of Alleroy teip

Maskhadov was from an alleroy family from Zebel-yurt village of the pro-Russian Nadterechny region; his wife was also a Nadterechny Chechen. When Russia retreated after the first war, Nadterechny Chechens recognized the Maskhadov government and many supported Maskhadov as the most moderate of all field commanders, also their zemlyak (person from the same area)

Maskhadov was supported in the region, however, he did not invite the Nadterechny Chechens into the government, he was afraid of being accused of favoritism, and of being called a traitor for helping Nadterechny Chechens, known for their pro-Russian position. That is why Basaev in fact overthrew him and betrayed, because he did not have close people around. Adam Dukhaev, editor of regional paper Terkijist, Nadterechny region of Chechnya
Perpetual opposition to Maskhadov on behalf of his challengers created a peculiar system of checks and balances, which prevented regional and kinship nepotism, moreover, as my respondents claim, Maskhadov, a product of Soviet military system, was outside the traditional framework of kinship, descent, locality of Islamic virds.

Conclusion
This chapter analyzed the 1997-1999 Islamist state-building project in Chechnya. I claimed that the political process in the given period was shaped by the socio-political context which led to the emergence of the new regime: the destructive but victorious war, emergence of strong field commanders with their paramilitary groups which many of them refused to dissolve, militarization of the male population, profound re-Islamization of the society, and emergence of “new” fundamentalist trends in Islam which due to their financial, military capacities and the persuasiveness of the doctrine were gaining prominence among the population.

The analysis of the state building project showed how Islam became the main contested issue among political forces in the republic, with opposition demanding more profound Islamization, more radical position in negotiations with Russia and more outspoken stand on Islamist causes worldwide. Under the slogans of deeper Islamization, the challengers of the regime in fact aimed to weaken Maskhadov, to gain more power, keep their paramilitary groups and have impunity in economic and other crimes.

The Chechen state under Maskhadov further lost the Mannian infrastructural power. Armed criminal groups illegally got control over oil wells, made in-cuts into oil pipes and virtually paralyzed the oil industry, the main budget forming branch of the economy. A handful of industrial enterprises recovered from war. The state’s capacity to deliver social goods was very low, and the Chechen system of education and healthcare were working on enthusiasm or financial contributions from students and patients. Maskhadov tried to settle perpetual political crises by accommodation, further concessions to Islamists and rare offensives on his challengers.
Despite the very flammable situation, Maskhadov managed to avoid internal conflict, purge state security services of criminal elements, take measures to raise the educational level of *sharia* courts, start having modest success in combat on organized crime, and in the end, to win a political victory over his challengers, who discredited themselves as impotent politicians, got all their political demands satisfied, but continued unconstructive opposition to the regime. In the end, peace was disrupted by Basaev’s invasion of Dagestan, which put an end to the Chechen quasi independence.

The main pattern of political integration in 1997-1999 were armed paramilitary groups and the main cleavage between them was religious-ideological (National vs. Fundamentalist Islamism), this shaped the republican political process. The political elite were formed on the basis of individual performance during the war, adherence to Islam, ideological position and paramilitary strength. The role of teips and virds was almost nil in state-building, marginalized by Islamist ideology of oneness of the Islamic *umma*. The Chechen politicians did not seek participation or legitimization on behalf of teips or seniors, and ignored them as potential actors. Vird affiliation became somewhat important as anti-Wahhabi sentiments were growing, but never reached the level of actual mobilization. Kinship played some role, which was insignificant compared to the above mentioned factors. Kinship was prominent in personal guards of politicians and gradually in paramilitary groups, which were first manned by former combatant comrades, but eventually started to have more prominent territorial, kinship, neighborhood elements.

As interviews quoted in this chapter illustrate, when a teip member or a representative of a region occupied the chief executive position, he tended to get some support of his teip members and the region. This partly explains the fact of Nadterechny region (Maskhadov’s birth place) not taking a “special” position in 1997-1999, although regional opposition of Urus-Martan (albeit of quite a different coloring) continued in the period under study. Although Maskhadov received some support from his Nadterechny area, he did not invite many Nadterechny into the
government. Being permanently attacked by the opposition he was cautious not to give reasons to accuse him of kin-based or region-based nepotism.

Similarly to the 1991-1994 period, the main challengers of the regime were not pre-existing but the newly emerged patterns of integration – paramilitary groups and regional opposition, also dominated by paramilitaries.

The case of 1997-1999 Chechnya further refutes the clan politics argument, which claims that state-building and political process in Vajnakh societies are shaped by the clans. It shows how much clan politics literature underestimates the role of ideology and religion, as well as other patterns of social integration, such as paramilitary groups. Applying Migdal’s classification of
state-society relations, the 1997-1999 interaction between formal and informal actors closely approximated the “incorporation of the state by social forces” pattern (Migdal 1988:25). The root of Maskhadov’s state failure was again a result of competing concepts of statehood. Rustowian “birth defects of the political community” have not been overcome. Chechnya of 1997-1999 was split between the supporters of an Islamic state and a nation state with significant prominence of religion.

This chapter will analyze the 1992-2001 state-building project in Ingushetia. I start by describing the socio-political context preceding the regime change, i.e. the Ingush national movement and the Ingush-Ossetian armed conflict of 1992. Dramatic defeat in the conflict and ethnic cleansing discredited the leaders of national movements, united the nation in mourning, which was conducive to undprecedented regime consolidation and support which Aushev enjoyed at least during his first term in the office. The second section will analyze the creation of the republican institutions and intial attempts at elite consolidation. Unlike Maskhadov who was accommodative of his rivals or Dudaev who promoted nationalists, Aushev marginazed the members of national movements and promoted non-nationalist consolidation of the Ingush. He avoided politicizing the memories of grievances, and promoted ethnic inclusion and sense of belonging to the Russian Federation. The third section will analyze the state building project with a focus on the government’s efforts to build a functioning republican polity. By scrutinizing the government policies to suport economy, enforce law and give an impulse to the newly born republican system of education and healthcare, this chapter illustrates how in the conditions very similar to Chechnya, the Ingush government managed to maintain order, avoid war and prevent the economy and social services from total collapse, moreover to give the republic a strong development impulse. The forth bloc will analyze government’s efforts to deal with the consequences of the Ingush-Ossetian conflict and Chechen wars, the two issues which came to be the main source of
political disagreement in the Ingush society of 1992-2002, however, had not transformed into open confrontation or even cleavage.

The last part will analyze interaction between formal politics and informal institutions and practices in 1992-2001 and argue that strong movement to revive Ingush teips and involve them in politics failed. Teips were unable or unwilling to develop a common position during the presidential elections, neither were they capable of solving any of the serious social problems which they tried to tackle. Retrofashion on teips improved coordination within lineages related to rituals, raised awareness of teip history and traditions among its members. Aushev had a significant number of relatives and members of descent groups in his government, nonetheless, this did not result in an intransparent or corrupt government.

7.1. Socio-political processes shaping state-building in Ingushetia: National Movement and Foundation of the Ingush Republic

The Ingush national movement fledged during the first years of perestroyka. It was comprised of the Ingush intellectuals and professionals who advocated for the return of Prigorodny Region, which used to belong to Ingushetia before 1944 and remained part of Ossetia after the deportation.

Already in October 1988 a delegation of Ingush representatives filed an appeal to the leadership of the Communist party of the USSR and the Soviet government signed by 8,000 Ingush which called for return of Ingush territories in Prigorodny Region of North Ossetia. In April 1989, another delegation handed over to A. Voss, the first deputy Chair of the Supreme Soviet of USSR a petition with the request to restore the national autonomy of the Ingush signed by 51,000 people (Patiev 2007: 200, 202).

On September 9-10, 1989 a Congress of the Ingush People was held in Grozny which had the return of the lands and restoration of the Ingush Autonomy as its main issues on the agenda. The Congress elected the Organization Committee for Restoration of the State autonomy of Ingushetia chaired by school teacher, poet and dissident, Issa Kodzoev. Two months later
Kodzoev was replaced by a doctor hab. of law, Beksultan Sejnaroev, which soon produced a in a schism in the national movement. Two organizations emerged: the People’s Council of Ingushetia, led by Sejnaroev was comprised of the intellectual elite, mainly residents of Grozny or Vladikavkaz, academics, economists, writers, lawyers, most of whom were communist party members; while the party “Nijskho” led by Issa Kodzoev was based in Ingushetia and had the support of the rural Ingush.

The two main rivaling groups within the Ingush national movement (People’s Council and the party “Nijskho”) did not have much of an ideological contradiction, both advocated for the Ingush autonomy within the Russian Federation, which would include Prigorodny region and part of Vladikavkaz. But “Nijskho” was more radical and engaged in protest rallies combining purely nationalist agenda with anti-communist slogans and attempts to get rid of corrupt party nomenklatura. In January-February 1990 Nijskho together with people’s deputies of regional Soviets gathered multi-thousand protest demonstrations in the Ingush towns and managed to replace regional party bosses with the democratically oriented Ingush (Patiev 2007:209). Many of my politically active respondents were of the opinion that the rivalry between the two groups resulted in radicalization of the national movement, and eventually contributed to spiraling confrontation with the Ossetians.

There were situations when one rally would stand in Nazran and their anti-rally would stand in Ekazhevo. One rally would claim that the others were KGB and the other would do the same. The People’s Council was not able to admit that it would be difficult to regain the region. Bogatyrev /one of its leaders- E.S./ would say: “No Russian soldier will shoot at you. Yeltsin is sitting in Moscow and waiting for us to take the region”. They incited people to action.

Yakub Patiev, Ingush ethnologist, former MP of the Supreme Council of South Ossetia.

On March 23-24 1991 Boris Yeltsin visited Ingushetia, he was the first Moscow leader of such a high level to ever visit Nazran or to publicly recognize the injustices committed against the Ingush and promise support. He started his speech with a traditional “As-salaam- alejkum"80 – which won the hearts of the nation. During the Presidential elections of June 12, 1991 Ingush cast 94, 7 % of their votes for Boris Yeltsin, the highest result in Russia (Gutseriev 1997:196). A

80 http://www.youtube.com/watch?v=tNzXhufbqnI&NR=1
year and a half later, however, after Yelstine sent tanks to cleanse Ingush from Prigorodny region, his words “As-salaam-alejkum, Ingushi” would be remembered with bitter irony and come to be the expression of the Ingush “betrayed nation” complex.

Before the Presidential elections on April 26, 1991 the Supreme Soviet of RSFSR adopted the law “On Rehabilitation of the Repressed Peoples”, the 3 and 6th articles of which stipulated the rights of the repressed peoples to “territorial rehabilitation”81. At the time leaders of human rights groups like “Memorial” warned against “territorial rehabilitation”, which in their view could provoke armed conflicts, however, their voices were drowned in the “historical justice”

rhetoric.

After the August putsch of 1991 and the Chechen National Revolution, Ingush deputies of the regional councils adopted the Declaration on “Founding of the Ingush Republic, part of the RSFS unified with the historical territory of the Ingush people and the capital in the right bank part of Vladikavkaz” (Ingush statehood. Normative-legal acts 1997:46).

The restoration of the national statehood is still perceived by most Ingush as the main achievement of the post-Soviet transition.

“I can’t even describe how happy I was, when the republic was created. I could not find a place for myself; I could not sit down for a minute overwhelmed with joy. Even if we are brothers with the Chechens, each brother wants to live in his own house. During the Soviet times, all factories and plants were built in Chechnya, nothing was built here... ” – Osman Khadziev, 1933, peasant, resident of Malgobek

After the republic was founded, the Russian federal center sent its representatives to help set up government institutions in Ingushetia, however, the specially created Coordination Committee decided that the elections to the Supreme Soviet of Ingushetia would not take place until the

issue of borders with Ossetia was settled. Thus, by the time when the situation in Prigorodny region started to get out of control, Ingushetia had functioned without institutions of government for over a year.

Since spring 1991 clashes between Ingush and Ossetians in Prigorodny Region occurred with a threatening regularity, people’s militias emerged on both sides. The full-scale armed conflict broke out at night of October 30/31 from armed clashes in two villages. As the news of the clashes and new Ingush casualties reached Ingushetia, hundreds of Ingush men headed to Prigorodny Region to help “defend their co-ethnics”. At about the same time a few hundred men from South Ossetia were already approaching Prigorodny Region to support their ethnic brothers. By 9:30 ten large villages were caught in full-blown warfare. Both sides used machine guns, grenade launchers, anti-aircraft guns and sniper's rifles.

In the afternoon of October 31 the Russian governmental delegation arrived from Moscow to Vladikavkaz. On November 1, the official position of Moscow delegation was verbalized by General-Colonel Filatov on the Ossetian TV:

“Today at 12:45 arrived the first plane with airborne troops, equipment and ammunition, which will be located on the territory of Ossetia. Russia has not forgotten its faithful sons, the Ossetians, who served it with faith and honesty for many years. Already today... the airborne troops together with interior forces of RF and Interior forces of North Ossetia will start military action against the aggressors...and every hour this resistance and pressure on the aggressors will grow...I want to warn all the rest, who find themselves in the zone of military action... I think it will not take us long to cleanse here all those who wants or disrupts the peaceful labor of Ossetia...I want to warn them that they should leave this territory and not disturb those peoples, who live here, on this territory, and who have lived here before in peace and agreement for long years...” (Quoted in Zdravomyslov: 1998: 65)

Next day several regiments of the Russian troops were brought to the region, which first drew the warring parties apart and then sided with the Ossetian interior forces and South Ossetian paramilitaries and forced 40-60, 000 Ingush civilians out of Prigorodny Region of North Ossetia and its capital Vladikavkaz. Almost 3,000 Ingush houses were intentionally destroyed (Zdravomyslov 1998:65).

Ingush forced migrants found refuge in the neighboring Ingushetia and in Grozny. Their return has been an extremely complicated political issue, which remains unresolved until now. The
Ingush-Ossetian conflict dramatically intensified the Ingush “memories of grievances” and has been perceived by the Ingush population as ‘genocide of the Ingush people’ committed by the Ossetians together with the federal troops. At the same time, part of the population and the elite is prepared to acknowledge that there was a fair share of the Ingush responsibility for the 1992 tragedy:

Many people say that it was a provocation on the Ossetian side with the aim of ethnic cleansing. I think that the conditions were such that they naturally developed towards the conflict. The Ingush lobbied the law on Rehabilitation of the repressed peoples- E.S. They just wanted to have this law, and did not care about the mechanism for implementation. Only some people understood that it would not be easy to return the region. The national leaders thought that once the law is adopted, we redraw the border and here’s the solution. They had no understanding that human beings are not a mechanical aggregate, that there are different characters, forces at work. Mukhtar Buzurtanov, MP of the People’s Assembly of the Republic of Ingushetia 2003-2008, former deputy – Minister of Internal affairs of Ingushetia.

Not surprisingly, the Ingush-Ossetian conflict resulted in the consolidation of Ingush society, strengthened the sense of ethnic belonging which was conducive to building a unified polity.

7.2. Creating Institutions, initial consolidation

Two days after the breakout of violence Boris Yeltsin introduced the state of emergency on the territory of North Ossetian SSR and the Ingush Republic and established a temporary federal governmental body – Provisional Administration in Ingushetia and North Ossetia. In the midst of the conflict, Ruslan Aushev, a 38 year old ethnic Ingush general-major of the Soviet Army, awarded “Hero of USSR” for combat actions in Afghanistan, at the time an MP to the Supreme Soviet of USSR from Primorsky Kraj arrived in the republic. In November he was appointed the head of the Provisional Administration in Ingushetia.

On February 28, 1993 Aushev was elected the President of Ingushetia (he was the only candidate to run), having received 99, 94% votes with the voter’s turnout of 92.66%.

---

82 Decree N 1327 of November 2 1992
Due to the emergency conditions, the People’s Assembly - Parliament of the Ingushetia was elected only in February 1994. A special decree of President Aushev allocated three guaranteed places for representatives of the Chechen minority and three places for representatives of the Russian minority. On February 1994 residents of Ingushetia voted for the Project of the Constitution of the Republic Ingushetia.

According to the Constitution, Ingushetia is a presidential republic. Any citizen aged 35-65 who has a command of two state languages- Ingush and Russian- can be elected the President for five years. The Parliament is elected for four years, and unlike the Chechen parliament of the time, which had broad credentials, including approval of all the ministers in the government, Ingush MPs voted only for the Chair of Government, Chair of the Supreme and Arbitration Courts of the Ingush Republic. There is no special mention of Islam in the Ingush Constitution, its article 11 states that “return by political means of lands illegally annexed from the Ingush territory and preservation of territorial unity of Republic Ingushetia is a most important goal of the state”. Aushev did not invite any members of the Ingush national movement into the government, which they were unable to challenge, being discredited as a result of the armed conflict of 1992:

“They brought us to the tragedy of 1992. They gave the pretext for Ossetia to get ready for war. They screamed that several thousand horsemen were prepared to take over Vladikavkaz. Which horsemen??!” Magomed-Sali Aushev, MP of Parliament of the Republic Ingushetia 2003-2008.

“The schism among the national leaders provoked internal contradictions among the Ingush. Because of these contradictions we were not able to found government institutions on time. By the time of conflict there were no authorities here, no security services. And it was not the fault of the Federal Center but of these national leaders” Ayup Gagiev, MP of Ingush Parliament, 3d calling 2003-2008. Head of group of advisors of the President of Republic Ingushetia 1995–2000, 2000-2002 deputy Minister of Justice of RI.

---

85 Ingush statehood: normative-legal acts 1997:96
According to Akhmed Malsagov, the Minister of Finances and later chair of government, Aushev had an uncompromised position on nationalist leaders:

_He categorically would not allow the leaders of nationalist movements close to the government. He was getting irritated when hearing about them. He considered that they inflicted a tremendous damage to the Ingush people. He never talked to them or made any concessions to them._ Akhmed Malsagov, Minister of Finances, Chair of Government 1997-2001

Thus, the President Aushev did not seek initial elite consolidation, but marginalized the nationalist leaders and rivaling groups. Ingush government tried to promote ethnic inclusion, and made a different use of historical memories than the Chechen leadership. Unlike President Dudaev who used every opportunity to collectively remember, emphasize and emotionally stir up the past injustices, President Aushev made due references to past tragedies whenever was relevant, but structured them around ways to remedy evils and overcome hardships regardless of the difficult past. “Enough of complaining- oh, we are such a much suffered nation. We need to work! Not to permanently look backwards”… (Aushev 1994).

Having marginalized potential opponents and informal groups, the Ingush President managed to consolidate the population by his firm, resolute, yet moderate style of leadership, independent but cooperative position towards the federal authorities, authentic effort and capacity to find solutions to numerous seemingly insolvable problems. On March 1, 1998, Ruslan Aushev was re-elected for the second term, this time having received 66.5% votes.

7.3.1. Economy

Ingushetia is a rural agricultural republic. After the break-up of Chechen-Ingushetia, Ingushetia inherited less than 10% of the ChIASSR production capacities (Gutseriev 1997: 195). The Republic had underdeveloped industry, social infrastructure and transport, no higher educational establishments, no hotel, railway station, airport, cinema, stadium, in many settlements there were no water-pipes, telephone connection or gas. In 1994 90% of the republican budget consisted of financial transfers from the Federal Center, and according the income _per capita_ it
occupied the last place in the Russian Federation (Gutseriev 1997:195). Ingushetia had the highest birth rates in the Russia, small territory and hence - high population density, which by 1992 was increased by at least 45,000 internally displaced people (IDPs) from North Ossetia and in 1994 - by over 100,000 and in 1999- by 300,000 IDPs from Chechnya (Serdalo 1995).

The dramatic decline in industrial production was a common problem of post-Soviet Russia. According to an Ingush economist Ruslan Malsagov, the deep economic depression of Ingushetia intensified by its closeness to conflict-zones, high share of military-industrial sector in the economy, which after the break-up of the Soviet Union remained without state commissions or investment (Malsagov 2007:15). Moreover, even the remaining production capacities were in use for over 15 years and required urgent modernization or replacement (Gutseriev 1997:195).

Although oil resources of Ingushetia are incomparably smaller than in Chechnya, in the Soviet times oil industry constituted 70% of its production. However, three major wells located at hydrogen sulphide containing oilfield were conserved, another 274 small wells were not functioning. An estimated 14-16 million dollars were required for their reconstruction and modernization, which the republic was naturally lacking (Toriev 2004:4).

In 1995 the Government of Republic Ingushetia adopted a program of social-economic development of the Republic Ingushetia for 1996-2006 aimed at economic self-sustainability, development of social infrastructure and raising the standards of living. The priorities in the sphere of economy, which President Aushev reiterated in many of his reports and appeals to the Parliament and Congresses of the Ingush people included: 1) replenishing the republican budget by raising profits of the local enterprises; 2) development of oil-chemical industry; 3) strengthening the budgetary discipline; 4) restructuring the agricultural sector 5) developing independent mechanisms of attracting investment (Serdalo 16 April 1998, 8 December 1999).

According to Ingush businessman and scholar, Dr. hab. of economics Mikhail Gutseriev, the implementation of this program required 1650 mln. dollar investment, 700 of them were required already in 1996-1998 (Gutseriev 1997:195). Although financial assistance of the Federal Center
was stipulated by various agreements, at that time Moscow was unable to provide for the most urgent needs of Ingushetia (Gutseriev 1997: 196).

In this situation the government of Ingushetia together with the Ingush economists proposed the federal government to create an experimental offshore economic zone “Ingushetia” and offshore Center of International Business “Ingushetia”. The Russian President YelstIn and Prime-Minister Chernomyrdin, who were unable to ensure financing of the nw republic’s most basic needs, supported the idea.

Free economic zone “Ingushetia” stipulated preferential economic and legal regime for the enterprises in the sphere of registration and taxation, aimed at stimulating economic activity (Gutseriev 1998:17). The financial mechanism was the following: the Cabinet of Ministers of the Republic Ingushetia received a budgetary loan equal to the taxes and mandatory payments to the federal budget by the newly created enterprises registered in the zone from the Ministry of Finances of the Russian Federation, which could be used for social-economic development of the republic (Ingushetia 30 July 1994). The Ingush offshore zone was initially planned for one year, but was subsequently extended several times until 1997. In the period from July 1, 1994 to April 1996, 3099 companies were registered in Ingushetia, including 140 foreign firms (Gutseriev 1997: 208).

Due to profits accumulated in the free economic zone 88 objects were constructed in 1995-1997, including a republican hotel, a confectionary factory, a boarding school, 61 modern cottage houses, a publishing house, 6 open cafes and 9 children’s entertainment parks (Gutseriev 1997:213). In the subsequent years the government managed to build a modern airport, railway station, TV station, hydraulic electro-station, brick-factory, stadiums, a military cadet school, water-pipes to Malgobek region which for decades had suffered of shortage of pure water, engineering communications, to carry out gasification of mountainous villages (Aushev: 199786).

Gutseriev 1998:213). The construction of the new capital Magas was financed from the profits accumulated in the off-shore zone.

Similarly to Maskhadov in Chechnya, the main priority of the Ingush government was to revive the oil-chemical and gas extraction industries, hoping that they would become the main budget-forming sector. According to Mustafa Akhriev, the deputy director of the concern «Ingushneftegaskhimprom” already in 1994 there was some revival of industry: 20 wells were reactivated, new well #98 with a daily debit of 50 tons of oil was open. An oil processing station was bought, which allowed collecting oil and transporting it to other regions. This provided funds to update and purchase equipment, to pay salaries to workers and taxes. The President managed to include Ingush oil enterprises into the federal program for reconstruction of the destroyed economy of the Chechen Republic (Akhriev 1995). By 1995 the output of the republican industry increased by 9.7%, oil extraction by 4.2% (Serdalo June 4 1996).

In 1997 Aushev succeeded in bringing foreign investors to the Ingush oil industry. An American oil company Pacific Petroleum signed a contract, aimed to increase the amount of oil extraction (Serdalo October 18, 1997). In his late 1999 report at the Congress of the Ingush People, the President Aushev expressed his dissatisfaction with the development of oil industry: “the level of oil extraction during the recent years stabilized at the level that allowed the industry to barely survive, the new wells were not being re-activated, oil-processing enterprise had not been build and there were cases of major theft revealed by the Department for control and revision with the President of Republic Ingushetia” (Aushev 1999). Nonetheless, compared to Chechnya, the Ingush government managed to prevent total collapse of the republican industry, moreover, achieved modest revitalization of the oil extracting sector.

7.3.2. Budget and Tax Collection

Aushev’s government invested significant efforts to enforce budgetary discipline and raise tax collection. Unlike President Maskhadov in Chechnya, who virtually gave up on collecting taxes
from individuals, Aushev tightened policies to control tax evasion. His decrees ordered commercial banks to strictly follow the Russian tax codes and file monthly reports to tax police on all taxpayers, and to report the same day all financial transfers exceeding 10 mln. rubles (Ingushetia 27 October 1993). In 1995 Aushev abolished all tax wavers to enterprises, unless they were registered in the off-shore zone (Ingushetia 24 January 1995). In July 1995, President Aushev tightened control over usage of cash registers for businesses when carrying out financial transactions with the population, again to increase control of tax evasion (Ingushetia: 11 July 1995)\(^7\). Illegal sale of petroleum products was banned and strictly controlled for. The government introduced inter-ministerial joint action plans for increasing budget discipline that the President personally oversaw (Serdalo 1998 #28).

7.3.3. Agriculture
In 1992 the Ingush agricultural sector was in a similar condition as the Chechen one – economically ineffective state farms required reform, most of the equipment was outdated, missing spares and some of it was squandered. Unlike Chechnya, being part of the Russian Federation, Ingushetia benefited from the federal programs, which provided subsidies for state farms to purchase seeds, fuel, and cattle (Serdalo 29 April 1995). At the same time, the Federal center was not able to duly support the regions, and state farmers did not receive salaries for up to eight months.

The government’s plan was to restructure the state farms into agricultural enterprises of various forms of property, joint stock enterprises, individual farms, and state-farms. Aushev was against privatization of land and most of the agricultural enterprises were transformed into joint stock enterprises (Serdalo May 30 1995). In 1995-1996 there was quite a significant decline in agricultural production, but since 1998 agricultural sector was slowly and partially reviving.

\(^7\) In Chechnya many businesses do not use cash registers until today
The Ingush government tried to appoint entrepreneurial successful people as heads of state farms, who in their turn looked for ways to encourage the agricultural workers in the conditions of acute deficit of cash:

*In Grozny I was the director of civic passenger transport enterprise with over 1500 employees. In 1994 we moved to Ingushetia. They asked me to work as a director of sovkhoz in my native village Dolakovo. I had a degree in agriculture, but I never worked in agriculture and never lived in rural areas. But they said – its no problem, you just have to have the right style of management. The squalor was terrible here. The farms had no windows, no doors; the fields have grown in weeds. I bought cattle in Krasnodar, we fixed the buildings of farms, planted the fields. Subsequently we set up a butter-producing workshop, a breeding nursery, and vegetable teams. Our fields looked beautiful! I paid good benefits to workers in natural products - barley, corn. Batarbek Akiev, head of collective farm “Dolakovo”*

Despite some revitalization of parts of the sector (production of grain increased four times in 1999 compared to 1998), in 1998-2001 the agriculture was still in crisis and provided for less than a half of the republican needs in agricultural produce. Less than 50% of credits and budget loans were returned by the agricultural enterprises, which had a negative impact on the sector and the republican budget. The deficit of agricultural machinery, seeds and spares as well as of fertilizers prevented the sector growth. The federal transfers to the sector were very limited, which, in Aushev’s view, was partly due to the incapability of the republican Ministry of Agriculture to lobby their interests in the federal Ministries (Serdalo 8 December 1999).

The results of Aushev governments’ efforts to revive the Ingush economy are evaluated differently by local experts. Some considered the free economic zone a big success which allowed the republic to raise from the rubble:

> "Free economic zone was the core around which everything else emerged. Ingushetia had no economy in 1992. Clear page. This zone gave a contour to the whole economy" Ayub Gagiev, MP of Ingush National Assembly, 3d Assembly, 2003-2008. Head of group of advisors of the President of Republic Ingushetia 1995–2000, 2000-2002 deputy Minister of Justice of RI.

Others, like MP Idris Abadiev considered it a failure:

> This off-shore zone was not profitable. The objects which they built did not give anything to the citizen or to the budget. For example, the railway station, what does it give to the Ingush people? He /President Aushev- E.S./spent 10 mln dollars on it. I would have built 50 objects for 10 mln, which would be replenishing the budget. I would have built a cheap railway station for one train with two cars. The costs of construction were inflated at least 10 times. Aushev was not corrupt
himself. But his close people did take bribes behind his back. Idris Abadiev, Ingush businessman, MP of Ingush Parliament, 2d calling

Critics of Aushev emphasized in interviews that the federal center had to anyway finance the objects constructed using profits accumulated in the zone, so Aushev should have made them pay rather than let Kremlin use the zone as a bargaining chip in the Ingush-Ossetian negotiations over the status of Prigorodny Region.

Akhmed Malsagov, Aushev’s Minister of Finances and late Chair of Government acknowledged that the zone was instrumentalized by the federal authorities to tame the Ingush territorial claims, but said that the zone played an important rule in affirming the Ingush statehood:

The zone was a distracting factor, for the Ingush not to demand Prigorodny region back. Aushev thought Ingushetia would not survive without the zone. He was always saying: unless we strengthen ourselves economically we would never return Prigorodny Region. He was right in a way. The zone helped us not so much economically, but psychologically. The people had gained optimism, hope that the republic would develop. Akhmed Malsagov, Minister of Finances, deputy Chair of Government, Chair of Government, Executive President of RI (1997-2001)

Magomed Tatriev, the 1st deputy chair of government explained that the Ingush government was determined to find economic resources themselves, because “waiting for favors of the federal center in the current very complicated economic situation, which is prevailing and will prevail as such in Russia for a long time - is an almost hopeless endeavor… (Serdalo 12 March 1996). In short, unlike Chechnya, where the government was unable to prevent squalor of enormous industrial economy, the Ingush government that had incomparably more modest capacities at their disposal managed to find ways to bring resources into the republic, to spend it for the republican development, which had very visible (although not always functional) results.

7.3.4. Law-enforcement
In Ingushetia, similarly to Chechnya, the problem of criminality was very acute. At the same time, the criminalization of the society did not occur. Combat on crime was the highest priority of the Ingush government and the President Aushev personally; his team found efficient ways to combat criminal groups.

In 1992 the Republic of Ingushetia occupied the 63d place in the ratings of the subjects of the Russian Federation, according to the effectiveness of combat on crime. In 1993, it already had
the third place in the Russia-wide rating, in 1995 it occupied the 1st place in the number of investigated crimes (77, 6% crimes were successfully investigated) (Serdalo June 14, 1995). Since 1996 the situation started to deteriorate dramatically, which was linked with the situation in Chechnya: criminal groups involved in human abductions for ransom outreached to the neighboring regions. But already in 1997 due to the efforts of the republican law-enforcement agencies the situation improved by 19.4% compared to 1996, and the uncovering of crimes reached 83.77%. (Serdalo November 4 1997).

When the republic was founded, law-enforcement agencies had to be created anew.

_Everything had to be created from the scratch, by 1993 the state institutions were virtually destroyed, including the Ministry of Internal Affairs. But we had professional cadres. Without good cadres the President would not be able to do anything_, Mukhtar Buzurtanov, MP of Ingush Parliament 2003-2008, former deputy – Minister of Internal affairs of Ingushetia (1995-1997).

_Ruslan /Aushev- E.S. / right away started tough combat on crime. Our Ministry of Internal Affairs had to confront both Chechens and Ingush gangs, but they knew that there was a courageous, resolute man behind them. Nobody questioned his decency and courage_, Magomed-Sali Aushev, MP of the National Assembly of Ingushetia, 3 Assembly

The Ingush government used a wide range of measures to strengthen law-enforcement: President Aushev regularly held meetings of heads of law-enforcement agencies, strongly criticized, controlled and personally coordinated their activities. Villages with the most unfavorable criminal environment were taken under special control. The government regularly introduced curfew in individual settlements. In 1996-1997 the Ministry of Internal affairs regularly, oftentimes monthly held press-conferences where its leaders reported on the results of their work.

The Ingush government paid much attention to raising the quality of personnel o law enforcement agencies. According to Executive Minister of Internal Affairs Korigov, 200 policemen were dismissed in 1996, who failed to meet the demands of the job. In 1997 on the order of Aushev, the police carried out a major cleansing of cadre, “getting rid of dirty people and those not meeting the demands of the job”. Over 300 policemen were fired in 1997 (Serdalo
April 14 1997). During the 1st term of President Aushev, three Ministers of Internal Affairs have been changed, and four Prosecutors.

Since 1996 Ingushetia was confronted with the problem of human abductions. Criminal networks functioning in Chechnya through their accomplices in Ingushetia found wealthy victims, abducted them to Chechnya and demanded ransom. The problem was acquiring a threatening scale. In the first 10 months of 1997, 44 people were abducted, 35 of them released by the Ingush security servicemen (Serdalo November 15, 1997). In the first 6 months of 1998, 26 people were abducted for ransom. Among the main reasons for inadequate investigation of such crimes, Minister of Internal Affairs Korigov named bad cooperation with the security services of the neighboring republics (Serdalo July 30 1998). Unlike Chechnya, in Ingushetia most of cases of abductions were investigated and hostages released. President Aushev personally worked hard on making this happen. Unlike Chechen government which was closing eyes on criminal gangs involved in human abductions acting under the coverage of the leading field commanders, the Ingush law-enforcement agencies made all the results of their investigations public, and published names and photographs of the criminals involved in such shameful crimes.

Trying to cope with the rising criminality, in February 1998 Aushev initiated a referendum “On broadening credentials of the state agencies of the Republic of Ingushetia in forming the judicial and law-enforcement institutions of the republic”, by which he tried to chop off some of the federal credentials in appointing judges and top officials of the republican security services. The Supreme Court of the Russian Federation ruled against this referendum on November 17, 1998 (Serdalo February, 26 1998). Then President Aushev called for the Congress of the Ingush People in November 1999 to discuss the worsened criminal situation in the republic and advised that the Parliament had a special hearing on “activities of law-enforcement agencies aimed at insuring security of citizens and combat on the abductions of people” and urged the nation to consolidate against criminality (Serdalo June 15, 1999).
The Ingush law-enforcement agencies were quite efficient in combating corruption and economic crimes. During the first six months of 1995, 61 specialized checks were carried out with over 100 violations uncovered. Results of investigations into economic crimes were publicized in press including names and damages inflicted. Kin or teip relations did not matter: thus, on July 25, 1995 newspaper “Ingushetia” reported about criminal case instigated against former head of ПИМК “Nazranovskoye” Kiloev and the senior mechanic Aushev, who falsified documents and appropriated financial transfers intended for salaries to workers and subsidies for children. Totally they were suspected of appropriating over 317 mln. rubles (Ingushetia 27, July 25 1995). Never after the President Aushev, a person from the same familia as the republican leader, could be publically exposed in an immoral action to such an extent. Making crimes public, openly criticizing officials, naming names, publishing photos and data on the most brazen criminals was a new development in the Ingush society, where the tradition prescribes to avoid direct confrontation, be diplomatic and respect the honor of the family. Aushev ignored these traditions.

In 1993 President Aushev issued a decree and developed a series of measures for preventing illegal privatization of state property in Ingushetia. Since all income from privatization went for construction of the new capital, the government was tough in monitoring all possible irregularities (Ingushetia January 20, 1994). The Ingush President banned registration of any commercial enterprises in conjunction with state institutions of the Republic Ingushetia “to prevent the emergence of conditions conducive to abuse and theft of state funds and material values (Serdalo January 24, 1995). Activization of combat on economic crimes returned significant funds into the republican budget (Serdalo November 4, 1997).

To conclude, the Ingush government under Ruslan Aushev managed to impressively combat crime, quite unprecedentedly for such an unstable time and turbulent region. Criminality was a significant challenge in Ingushetia, just as it was in Chechnya, however, the criminalization of the society did not occur.
7.3.5. Education and healthcare

In 1992 Ingushetia ranked the lowest in the Russian Federation according to the number of hospital beds per capita, had no specialized clinics; emergency ward, many village ambulances had no due premises and lacked in basic pharmaceuticals and staff with higher medical education. The republican maternity house required a major reconstruction (Toriev 2004: 7).

The Ministry of healthcare was founded in 1992 and was housed in two vinous refugee wagons in the courtyard of the Nazran district hospital which was renamed into Republican Clinical hospital. “The situation was very complicated. In the regions there were no qualified cadres, only nurses. In 1992 after the Ingush-Ossetian conflict all the qualified Ingush doctors, who worked in Ossetia fled to Ingushetia and took up jobs and then in 1994 our capacities strengthened after the inflow of refugees from Chechnya, among them were also qualified doctors. Specialized clinics and departments started to open, because now we had specialists. Khadizhat Musieva, director of Children’s Polyclinic at the Republican Clinical Hospital

To resolve the problem of cadres, the Ingush government requested additional placements for students in medical schools in Russia, in 1993 opened a medical college for nurses in Nazran and in 1997 a medical department at the Ingush State University.

At first the quality of education was not too high, but the Dean invited faculty from Grozny, later our local specialists received degrees, defended dissertations, we now have qualified academics at the department.” Khadizhat Musieva, head of the Children’s Polyclinic, at the Republican Clinical hospital

President Aushev personally negotiated with the Federal Ministries to get funding and equipment for the republican hospitals. Thus, in June 1998 Aushev managed to persuade the Minister of Health of the Russian Federation, Oleg Rudkovsky that T.B. in Ingushetia was reaching the scale of an epidemic and to secure funds for the construction of T.B. prophylactic center, a bacteriological laboratory, for stationed fluorography equipment and other medical equipment (Serdalo June 9 1998).

Ingush healthcare was under immense stress during both Chechens wars:

“The inflow of IDPs was enormous. We did not know what to do. The first winter was very difficult, the refugee camps were the responsibility of the Republican hospital. Sometimes each doctor received 50-60 patients a day. International organizations helped a lot, but doctors were from local institutions, who for several years worked in the emergency conditions” Dr. Magomed Gadaborshev, urologist, Republican clinical hospital
The educational system was also strained by conflicts, crisis and outflow of the Russian-speaking population. The republican schools worked in three shifts lacking in over 20,000 places per year due to natural population growth, the situation was dramatically intensified with the inflow of refugees from both conflict zones (Toriev 2004: 8). The deficit of school placements equaled to construction of 63 new schools (Bednov 1995).

International organizations helped set up schools in refugee camps, but many IDPs lived in the private sector and sent children to regular schools. The quality of education in Ingushetia was extremely low as a result of over crowds, lack of equipment and text books (Toriev 2004: 8). The republican government allocated funds from the profits of the offshore economic zone to construct a new modern building of the lyceum, and a Mountaineers Cadet School, which the President envisaged as a boarding school for breeding the future Ingush elite. The Cadet school tried to maintain multi-ethnic composition of students, allocating places to students from Dagestan, for Chechens and Cossacks from the republican budget (Serdalo 22 November, 1997). Ingushetia suffered from an immense deficit of the professional cadre: it had 3.5 times fewer specialists with higher education and 4 times fewer specialists with secondary education than was the average in Russia (Ingushetia December 22, 1993). In 1994 Ingush State University was founded and 423 students were enrolled into five departments of the University (Serdalo June 27, 1995). By 2001 the university was educating students in 17 majors and had a research center in the Ingush literature and language. The university was an important contribution to the capacity-building of the republic. Due to low income and increased costs of living, most of families were unable to educate their children outside the republic, moreover more female students got access to higher education:

*University is very important, now more people can get educated in their own republic. Due to our mentality many people did not let girls to go away and study. Now Ingush send girls to school. This is a very important change.* Magomed Mutsolgov, leader of NGO “Mashr”

Along with secular institutions, an Islamic Institute named after Imam Ash Shafi opened in the Ingush town of Malgobek, which came to be the first Islamic higher school in Russia. The
university existed on private donations and had foreign and local tutors. The vice-Rector for academic subjects and subsequently the Rector of the Institute, Issa Tsetchoev, was educated in Algeria and thought to be of fundamentalist inclinations. Many of the students of this university were later arrested or killed by security servicemen allegedly for participation in armed groups. Like in the case with Khattab’s training center “Kavkaz” many young people who went there were initially appealed by the not very competitive enrollment and the prospects to eventually get into a rather lucrative profession of mullah. However, most of them eventually became bearers of the fundamentalist ideology.

After I served in the army, I went to Saratov and wanted to get into law school there, but failed the essay-writing exam. I was preparing myself again the next year, but next time I got a “4” /B-E.S./ and again was not enrolled. Next year again I was studying for the exams when everything was decided by fate. My uncle stopped by and said that an Islamic Institute was open in Malgobek and they have decided that I should study there. Before that I did not do namaz, I was drinking with guys during the military service.

And there I learnt that Allah is our President, and Tsar and the Protector. Who are the other Presidents? If you have said la-ilahha-il Allah /There is no God but for Allah/, then we have no Russian laws anymore. Koran is our law. Sharia is Koran; everyone has to live according to laws of the Almighty.

The Islamic Institute was closed by the Ingush government in 1997. Ruslan Aushev, who fought Taliban in Afghanistan, did not want to breed fundamentalism on the Ingush soil.

7.4. Issues of Political Disagreement: Ingush-Ossetian conflict, Wars in Chechnya

The main issues of political disagreement in Ingushetia of 1992-2001 were negotiations on the Ingush-Ossetian conflict and the policy towards Chechnya. President Aushev’s approach to resolution of the Ingush-Ossetian conflict was to give absolute priority to the return of Ingush internally displaced people (IDPs) to their villages in Prigorodny region over all other conflict-related issues. Already in January 1993 the first protocol was signed by Presidents of Ingushetia and North Ossetia which had a symbolic function of a ‘peace treaty’ where parties agreed to
abide by the Constitution and laws of the Russian Federation, and start resolving the problems of forced migrants.\textsuperscript{88}

As a result of the Ingush government pressure already in 1993, less than a year after the warfare, the first IDPs returned to their villages adjacent to the Ingush-Ossetian border. Ossetian armed groups were still active on the territory of Prigorodny district and their disarmament was ineffective. Convoys with returning IDPs were systematically attacked, returnees killed or injured; oftentimes these attacks happened in the presence of federal officials and military units. The Ingush government protested and called for investigation of each of such episodes of violence; dangers notwithstanding, hundreds of Ingush IDPs returned home in 1993.

On June 24, 1994 in the town of Beslan President of North Ossetia Galazov and President of Ingushetia Aushev signed the so-called Beslan Accords, which part of the Ingush consider betrayal of the Ingush cause. These agreements outlined the logistical details of IDP return, and contained lines which confirmed that both parties agreed to “abide by the laws of the Russian Federation and North Ossetia, and recognize the territorial integrity of the Republic of North Ossetia”, this way explicitly giving up on the Ingush territorial claims. By the end of 1994 over a thousand of Ingush IDPs returned to their villages.

President Aushev’s signing of documents which practically repudiated the territorial claims to North Ossetia produced strong dissatisfaction of nationalists. His policy to never insist on the return of the land, but demand the return of refugees was for them an unacceptable trade-off. Aushev’s opponents considered the construction of a new capital as another major retreat, namely giving up on the Ingush claims on the right-bank side of Vladikavkaz:

\textit{The greatest crime was the foundation of Magas. Ingush have their capital- Vladikavkaz. Aushev was sent by Moscow to ensure the territorial claims of Ossetia.}  

Bamatgirej Mankiev, MP of Ingush Parliament 2003-2008, former Deputy of Supreme Soviet of ChIASSR.

For the same reasons, nationally oriented opponents of Aushev were against off-shore zone “Ingushetia”, treating it as a political carrot offered by the Kremlin in return for concessions on

the territorial claims. These disagreements coupled with still tremendously difficult economic and political situation transformed into 33% reduction of voters’ support to Aushev in the 1997 elections.

Another issue which caused major political controversy in Ingushetia was the republican policy on Chechnya. President Aushev was extremely critical of the federal government for launching wars in Chechnya, he opened border to Chechen IDPs and invested much effort in assisting them in Ingushetia. For this, Ingush nationalists accused him of defending the Chechen interests more than the Ingush ones.

Ingushetia was affected by the Chechen war not only as a host to refugees but also directly. In 1995 the Ingush mountainous villages of Dattykh and Arshty were repeatedly bombed with human fatalities. In October 1995 the civilian airport in Ingushetia was subjected to aerial attack by seven helicopters of the federal forces. Then paratroopers landed and they as well subjected to fire people waiting for the passenger plane from Moscow (Serdalo 3 October, 1995). Federal units illegally entered the territory of Ingushetia. The Ingush government and the parliament protested, Aushev demanded military prosecutors to immediately start investigations into the illegal actions of the 58th army, travelled to the affected settlements and urged the population “not to react to provocations and not to let Ingushetia be dragged into the war” (Serdalo February 27, 1996, Serdalo March 6 1996). Moreover, Aushev facilitated negotiations between the Russian government and the Chechen leadership and was the middle man in many of them. President Aushev travelled abroad and met with the Ambassadors of USA, and EU countries in Moscow, held press-conferences strongly condemning wars in Chechnya (Serdalo: 28 February 1995). He hosted Russian and international organizations in Ingushetia, who documented war crimes by the federal sources.

Yeltsin tolerated Aushev with difficulty, but once Vladimir Putin replaced him and launched his “strengthening the Russian statehood” project, Aushev had to voluntarily resign before the end of his term (December 28, 2001). The 1st Ingush President never made statements explaining his
resignation, but most experts agree that he probably understood that he was not able to continue working cooperation with the new leaders in Moscow.

Until his voluntary resignation in the end of 2001, Aushev controlled security services on his territory and managed to prevent “the counter-terrorist” operations by federal forces from spilling over to Ingushetia. Immediately after his resignation mop-up operations following the Chechen scenario (involving grave human rights abuses) started in Ingushetia. At the same time, with his resignation, armed groups resisting the federal forces became more active in Ingushetia, attacking security services and troops. By 2007 Ingushetia became a full-blown hot spot, and since 2008 – the area of most intense armed confrontation in the North Caucasus. Aushev’s opponents consider him responsible for such a development. By opening borders to Chechens, they claim, he created a breeding ground for fundamentalists and radicals in Ingushetia.

Aushev’s challengers were mostly nationalists, who were disappointed with his stand on the Ingush territorial claims and his over-assertive pro-Chechen position. Nonetheless these challengers were not able to, or consciously abstained from standing up against the Aushev administration.

*After his first term, there were people who wanted to overthrow him /Ruslan Aushev- E.S. /. They came to me and said- let’s organize actions of civic disobedience. I said ‘I am not going against him. Ingush Republic is a feeble child, it can die if we start fights. I respected him for not allowing the soldiery to get over Ingushetia,”* Issa Kodzoev, Ingush poet, writer, leader of national party Nijskho

There was no open opposition to Aushev in 1992-2001; neither did he ever use repression against the political dissent. The Ingush Parliament had limited credentials in respect of the President and although the relations between the executive and the legislative got sometimes tense, the parliament was not a strong constraining factor on the President. Thus, the internal system of checks and balances was existent but not very prominent in Ingushetia of 1992-2001.

The first part of the chapter showed that in the conditions very similar to Chechnya, efficient government prevented the Ingush polity from failing. Creative approach and consistent effort to
find ways out of crises prevented the Ingush society from criminalization, gave modest results in revitalizing economy and an impetus to the development of the Ingush educational system and healthcare. The contradictions between Aushev’s supporters and opponents were ideological and did not involve pre-existing structures or kin-groups.

7.5.1. Teips and Familias
Similarly to Chechnya, the national revival in Ingushetia went hand in hand with the revival of fashion on teips. Ingush teips held congresses in the mountains, in their familial towers and castles to enhance teip solidarity and discuss current social and political issues.

“The three years ago our Elders organized a trip to the mountains for all our men. We spent three days in the mountains, cleaning our tower, recollecting stories and legends about our teip. It was much fun. I now know lots of things about my teip. We have a rich history. There are so many of us, I was surprised” Roustam Yandiev, Vezherij-yurt, aged 24

Idris Abadiev, a successful Ingush businessman and politician explained why he sponsored teip gatherings:

In the late 1990s my brother and I several times organized congresses, invited people to the mountains. We slaughtered cows, boiled meet. We also brought Chechens, who belong to our teip. Their seniors had tears on their eyes when they learnt about their family roots. In the Soviet times only those who were close maintained kin relationships. The rest had already forgotten that they were Evloevs, started to intermarry. We wanted to unite them. Idris Abadiev, Ingush businessman, MP of the Peoples Assembly-Parliament, 2d calling

Teip congresses resulted in some coordinated actions. Visiting mountainous Ingushetia, where Ingush familial towers and castles are located, one would see that many familias have undertaken attempts to restore their family relics. Some wired electricity and planted orchards and had their teip representative (usually one senior per teip) move to live in the towers. In the summer of 2009 I interviewed senior Alikhan Evloev, who moved to the Evloev’s tower complex in the place called Pyaling, 14 years ago with his young wife. He lives there all year around, breeds
horses, bees and cattle, invites visitors for tea and stories about Pyaling, and keeps friendship with generals of frontier troops stationed nearby.

A member of Ozdoev teip, Alikhan Dozariev, told me that during the first congress of Ozdoevs in 1995, the teip decided to build a 5 kilometer road to their most famous tower “Vovnushki”, a late medieval castle, which is included in the register of “Miracles of Russia”. They collected money, and built the road, but were unable to carry out the restoration works, since this had to be done by the Minister of Culture and involve professional architects. “We also decided to have one representative of each familia comprising Ozdoev teip to actually live in the towers, and maintain them”. However, as of the summer 2009, no members of Ozdoev teip permanently resided in mountainous Ingushetia.

Most teips have made order in their cemeteries, raised money among their members to build premises for praying. Thus, Aushevs built a praying place and engraved a genealogical tree at the entrance to the cemetery so that everyone could learn of his or her roots. Three members of the Uzhakhov familia gave money to build a praying house “Джамаат-Циле” at the teip cemetery in Barsuki village. At the same cemetery a young businessman Ruslan Uzhakov built a house for reading Koran in memory of Teshal Uzhakhov, an associate of the 19th century Sheikh Kunta-Khadzi Kishiev, the founder of Qadiri tariqa in the North Caucasus. Six other teip members rented six hectares of land around the cemetery for 99 years, which used to be the teip lands (this way preventing other people from buying it or settling there).

Many Ingush teips have undertaken serious efforts to reconstruct the history of teip, lineages, and genealogies, put together telephone lists of teip members. Some teips created their heraldic symbols – for example the teip symbol of Evloev teip is registered in the Russian Heraldic Society (Heraldic matricul, V.3, #434). Teips reconstructed and used in heraldic symbols the petroglyphs (tamgi), which were engraved on Ingush towers and castles in the mountains. A group of teips, comprising the Tsori society, created a website dedicated to its history, culture and current affairs – www.tsori.ru (currently the site is not functioning).
Most of teip activity was focused on the issues of culture and ritual. I have a protocol of a meeting of “Council of Elders and the initiative group of Uzhakhov teip” of January 12, 2002. According to the protocol, 22 representatives were present from 7 settlements. A history fiend of the Uzhakhov teip, middle-aged activist, former opera singer Magomed Umatgireevich Uzhakhov, delivered a report, in which he summarized the results of common efforts and proposed issues for the discussion:\footnote{Council of Elders and the initiative group of Uzhakhov teip. 12/01/2002. Archive of the author}

- Alcohol consumption by some young and old, which “creates anxieties in the families, in the society and has a damaging effect on their health”. Measures to be discussed: to make them undergo treatment, to excommunicate them from teip.
- Drug addiction and distribution. Measures to discuss: to make them undergo treatment, to excommunicate, to resettle them to another region of Russia, to put them to jail.
- Resolving land disputes and issues of inheritance. Question for discussion – which law to use /secular, adat, sharia- E.S./
- Unresolved financial disputes. Measures proposed: to facilitate their resolution
- “Urgent issue of timely marriage for youth of both sexes and of the divorced”. Measures proposed: to create a commission
- Assistance to ill members: assistance in care at home, in hospitals, organizing treatment and diagnosis outside the republic
- Regulating issues of blood feud, reconciliation
- Mutual assistance in case of abduction of bride or other family member
- Better coordination of weddings and funerals (how, when and who informs others, who organizes the events, how much time or how many days should different teip members stay at the event and help, how should seniors be dressed, especially at funerals, why the same food is cooked at all events, why no dancing is anymore taking place at weddings, to restore dancing and stipulate in which exceptional cases should dancing be prohibited).
- Looking after the cemeteries. Obliging all teip members to write a vosket (a will, composed according to the Muslim tradition).
- Restoring the tower of Uzhakh teip
- “…in this very difficult time to be in the avant-guard of all positive state-building processes and changes for the benefit of the Ingush and Russian people as well as of our teip. For this reason to support upward mobility of our brothers and sisters, particularly those who have life experience…and intellectual capacities to government agencies, up to the UN. Or to support any candidate of any teip of the Ingush people who would be useful to the entire Ingush and the Russian people, as well as to our teip of Uzhakhovs”.

This was a rather grand agenda with serious measures proposed, however, according to the protocol, the actual discussion was focused on the creation of a Religious council with the Council of Elders to resolve ritual issues, on usage of teip land rented for 99 years, on mores, and creation of self-help fund. None of the issues which would involve enforcement or serious
investment were even discussed (eg. excommunication of drug addicts or resolving financial disputes), the elders limited themselves to re-emphasizing the importance of moral lifestyle and resolving conflicts according to law. Regarding promotion of teip members to office, on the initiative of teip activist Magomed Umatgireevich Uzhakhov, Elders sent a letter to the Advisor to President of Republic Ingushetia, Kambulat Uzhakhov, asking him to help teip “brothers and sisters” to get employment according to their education or to help those who do not have education to get it. This appeal seemed to remain without consequences. The issues discussed at the Uzhakhov gatherings are typical of such events. Respondents from other teips reported similar agenda at their teip gatherings, so did publications in press, covering Congresses of bigger teip unions, such as for example, the clan public association “Tsori” (Serdalo 20 December 1997).

Magomed Umatgireevich Uzhakhov, the most active member of the Uzhakhov teip, a history fiend and the initiator of most Uzhakhov efforts is disappointed with participation of his teip members. According to him, most of the initiatives have never been implemented. Raising money for common projects proved very difficult, people’s interest was dramatically going down after 2-3 events.

We elected the Council of Elders and the tamada. The train did not go much further than that, even the council fell apart. I made a list of people who were worth of commemorating/mainly heroes of various wars-E.S./, but we could not raise money for that. The book about Uzhakhov teip is still not published, we are lacking in finds. I even created special Uzhakhov post-cards, which should be used as invitations to weddings. But they are not catching up. Magomed Uzhakhov, ex-opera singer. Activist of Uzhakh’ familia.

The interesting part of the story is that the Uzhakhovs, who in all their documents call themselves “a teip”, are actually a lineage (nek’an) of a larger teip of Gazdievs. The word “nek’an” (lineage, Ing), reminding of their actual belonging to the larger teip can only be found on the heraldic symbol of Uzhakhovs. My colleague, a member of another familia, which in most of sources is also classified as belonging to the Gazdiev teip and the same is suggested by their genealogy, had a long argument with me that this data was wrong, and they were a separate teip.
He was very anxious that in my book I would classify their **familia** as part of the Gazdievs, for this reason I do not specify which one he belonged to, but re-emphasize the confusion between teips and lineages, scrutinized in Chapter 4 and the actual relevance of lineages rather than teips, even in Ingushetia.

As the story of the Uzhakhovs exemplifies (and this seems to be a typical story in his respect), the teip usually has several middle-aged activists with strong teipist ideology, who either romanticize teip or want to use its support for political purposes. However, most of other teip members, including the seniors are usually not interested in enforcing teip discipline over individuals or extended families:

> We had a Council of Elders. The Chair was Sulumbek-Khadzi, a mullah. I told him, we should enforce discipline, but he did not want discipline for some reason. He actually contributed to our disintegration. The Council existed till the elections /2002-E.S./ and then the election split us. 
> Idris Abadiev, Ingush businessman and politician

In most teips Councils of Elders did not turn into a working institution, they met only rarely on some very special occasions, but otherwise seniors get together to perform their ritual function at weddings and funerals. In short, teip congresses played an important role in dissemination of knowledge about the teip and awareness of teip history, and individual roots, teip members started visiting more distant relatives for weddings and funerals, rituals became better coordinated, family cemeteries taken a better care of.

Uzhakhovs are a medium-sized teip and its representatives told me that they never tried to organize themselves politically, because “this is ineffective, we can never concur in political opinions, moreover this is dangerous for our security”, Daud Uzhakhov, Altievo.

However, large teips, did attempt to mobilize politically or discussed the possibility of such mobilization, during the Presidential elections of 1998 and 2002. None of the Ingush teips was able to vote in an organized manner, some abstained from even trying for various reasons. The Barkinkhoev teip decided that taking sides would threaten the position of teip members in the
society. Taking a stand on some candidate would automatically mean positioning all members against others. Since the elections outcomes are unpredictable this was undesirable.

*Before the 1998 elections of Aushev the seniors of Barkinkhoev teip got together. I was elected to represent the Kotiev familia. Our Barkinkhoev scholars, professors and doctors of science were talking, expressing their opinions. Afterwards we deliberated and came to a conclusion that everyone should vote the way they wanted, although anyone has the right to express an opinion and share it with others. One of our seniors, aged 75-80, spoke up and said “All the candidates are dignified, educated people, with their familias, their convictions and we can have nothing against any of them. We should not divide people by familias or categories, we have suffered enough and we should not split the people. That is why everyone should vote for him/herself”… You see if we made a decision to vote in an organized manner, we would have had to declare it publically in front of the nation. And such things would never be forgotten or forgiven, this would be remembered for generations on, it could have an impact on our off-springs, so our seniors said that they forbid to even raise the issue of organized voting in the future.*  Magomed-Sali Kotiev, teip barkinkhoy

The two largest Ingush teips – *ozdoj* and *jovloj* had their representatives running the presidency and they tried to organize disciplined voting, which in both cases failed. In both times, the initiative came from politically active teip members who tried to use teip support as a resource for boosting their positions:

*Second time when there were elections of Aushev in 1998, there was an attempt to get all Ozdoevs together. Boris Ozdoev, a judge, was also running the presidency. So there was an attempt to unite and support Boris. I remember how our seniors argued: Boris is an educated, decent person, he is our relative. But what can Boris give to the entire people? So they made a statement, saying that electing a President is a responsibility, that is why everyone has to decide for himself, because tomorrow everyone will have to be responsible for this decision. They said that electing the President should not depend on the teip. But, honestly, everyone supported Aushev, not Boris. It should not be this way that we elect a family person the President. President is a national position.*  Alikhan Dozariev, teip ozdoj

The most dramatic story of deconsolidation was that of the Evloev teip, which, according to its representatives “split completely” in the process of trying to identify a common position on the 2002 elections, after Aushev’s voluntary resignation. During these elections, 8 candidates were running, Aushev’s team was represented by Mikhail Gutseriev, the founding father and the head of administration of the off-shore zone “Ingushetia”, while Kremlin put a stake on an FSB
This is what Idris Abadiev, an MP, a candidate to presidency, member of Evloev teip told me about these elections:

In 2002 my brother and I were running for the presidency. We had the following tactic - we wanted to first run both of us, because he was better known in Moscow and I had more influence in Ingushetia, and then we planned that in the last moment one of us would withdraw and focus voters on the other. Evloevs is a huge teip, if all Evloevs unite - that’s it, no president can be elected, unless supported by them. We had tremendous chances to win. So, what Gutseriev did? He had the head of his guard - Evloev, a good guy. Then he was in close contact with Vakha Evloev, champion of Europe in wrestling, and then there was the third Evloev- Evloev Zakri, who several times ran for the Parliament. And the fourth was Maskurov; he was Vice-Premier in Aushev’s government. Gutseriev encouraged all of them to run! Plus me and my brother, 6 Evloevs! This way Gutseriev fragmented us. Zakri Evloev right away acknowledged that he was a Gutseriev’s man. Vakha Evloev later announced on TV that he withdraws in favor of Gutseriev. Maskurov turned out stronger, but even he proved to be a Gutseriev man. This is how we were fragmented. As a result not Gutseriev or Evloev, but this Zyazikov came to power. Idris Abadiev /teip Jovloj/, candidate to presidency 2000.

Experts find this incapacity to mobilize teip quite natural:

When Ruslan Aushev was running for the second time, there were 8 other candidates. Among them were representatives of big teips- Kostoev Issa, Albogachieva (Lejmoev), Evloevs. They calculated that if the representatives of their teips vote for them, Ruslan won’t get more than 50%. Then they would unite in the second round and win. There was also Aushev Mukharbek running against Ruslan, to split the Aushevs. I understood this situation. I was telling them: do not expect your teips to give you many votes. Ruslan is very respected, people are interested not in which position you get, but how the republic is governed. All the candidates from other big teips got 33% in the first round. Ozdoev, who has the largest teip, received about 1000 votes. Albogachiev- 600! Kostoev received 13%, but he was a respected man. They tried to mobilize the teip factor, but they failed. Now the time has changed. Now it is the individual family that is in the center of everything, not the teip. The teip can only give you moral support, especially in the cases of blood feud. But for political positions we now choose respected people. Mukhtar Buzurutanov, MP, deputy Minister of Interior 1995-1997

This section has argued that 1992-2001 was the period of revival of teip identity in Ingushetia. Many Ingush teips, but especially lineages (familias) undertook significant efforts to consolidate, to research and popularize their history, coordinate rituals, increase solidarity and solve certain social problems, like low morality, alcohol consumption and insufficient state capacity to provide care to needy and ill. Some of the teips tried to consolidate politically and defend their interests through elections of teip members to state institutions. However, the teip turned out incapable not only to develop a common political position, or to agree on a candidate from among its members, but also to have any significant impact on resolution of social problems.
Anything that required commitment, either financial or in time did not move very far. Teip remained a loose identity, which had a different relevance to different people, depending on their ideology and beliefs. The findings of my fieldwork prove that in Ingushetia, similarly to Chechnya lineage has become the main point of reference when descent groups are concerned. Moreover, in Ingushetia some lineages have forgotten their ties to the larger teip or lost their feeling of attachment. The role of descent groups is limited to ritual, match-making and culture, preservation of some ethnic history and collective memories. The role of seniors is also mostly limited to ritual and some symbolic support of statehood, teip/lineage consolidation has been usually initiated by middle-aged politically active members or history fiends, with strong “teipist consciousneses”.

7.5.2. Religion
Similarly to Chechnya, in 1992-2001 there emerged a new fundamentalist Islamic movement which provoked tensions in the Islamic umma in Ingushetia.

*I was brought up in the Sufi tradition. I appealed to my Sheikh when I tried to take exams to the university. My father carried hair of Deni-Sheikh in his purse. When I was accepted to the Islamic Institute I would come back home and tell my father and mother what they told us at school and how we did things wrong. They were so indignant: what are you saying about our Sheikh! This way we were labeled Wahhabists. The religious conflict was superimposed on the Vajnakh hierarchy. Older generation has this attitude: “Who are you, milksop!” It was hard for them to accept us.* Moldi, 1969, Ingushetia

The Islamic Institute received books from Saudi Arabia, brought to Ingushetia by a delegation headed by the Ambassador of Saudi Arabia in the Russian Federation. According to my respondents in Aushev’s government, the President himself was not religious; however, he thought it was necessary to revive Islam, which could play an important role in upbringing of youth. But he was for traditional Islam and in order to resist fundamentalist tendencies introduced Sufi Islam as a subject at schools, and closed the fundamentalist Islamic Institute in Malgobek.
Akhmed Malsagov, a Chair of government remembered how President Aushev ousted an official delegation from Saudi Arabia, which arrived to Ingushetia through the Ministry of Emergency Situations of the Russia Federation:

*A delegation from Saudi Arabia arrived; they said they would build a hospital and the largest mosque in Europe here in Ingushetia. Aushev literally ousted them from the republic. He said: send them away, they are Wahhabists, spies. I was so embarrassed, I said: “Ruslan, they were sent by the Russian Ministry, they are our guests”, but he would not listen, just shouted: I don’t want to see them here! The delegation was very offended and later we had problems with the Russian Foreign Ministry, they said that we had no right to deport an official delegation. This much we were afraid of this Wahhabism. Akhmed Malsagov, Minister of Finances, Chair of Government (1997-2001)*

By 1998 the problem of Islamic fundamentalism became of serious concern to the republican authorities, who witnessed the developments in the Chechen republic and clearly identified fundamentalism as a threat. In 1997 in his annual appeal to the nation Ruslan Aushev called Wahhabism “a harmful movement”. 1998 he issued a decree on regulating the activity of religious educational establishments and supervised the development of joint action plan of the Spiritual Board (Muftiyat) and the state agencies (Serdalo 8 January, 1998). All the Imams of Ingushetia were to receive salaries from the state budget; the missionaries from other states were advised to leave the republic (Serdalo 5 August 1998). On August 17, 1998 a meeting of leaders of Spiritual Boards of the North Caucasian Republics was held in Nazran, which created the Coordinating Center of Muslims of the North Caucasus with headquarters in Ingushetia, aimed to resist Wahhabism (Serdalo 26, 27 August).

Fundamentalism did not get widespread until the beginning of the second Chechen war. Aushev managed to control and marginalize fundamentalist groups and did not give too many reasons for their critique – the state respected the freedom of consciousness, mosques mushroomed, Uraza-Bajram and Kurban Bajram (two main Muslim holidays) were state holidays in Ingushetia and days off, sale of alcohol was prohibited during Ramadan, Islam was introduced as a subject at schools, Aushev legalized polygamy, on top of it the government was doing its best to somehow deliver social goods to the population, there were no major violations of human rights, which
fundamentalists usually speculate on to garner support. Aushev’s critical position of the federal policy in Chechnya made him a respected figure among Chechen field commanders, who abstained from challenging his regime.

7.5.3. Elite formation: Kinship, Personal Networks, Ideology (Program)

One can hear polar opinions on the role of kinship in the President Aushev’s government. Usually the evaluation of prominence of kinship ties in 1992-2001 depended on a respondent’s attitude to Aushev as politician and his state-building efforts in the Ingush Republic.

When asked about the role of kinship in Aushev’s governments, his opponents would start to enthusiastically tell the story of how Ingushetia was turned into Aushetia, and all the most important positions were occupied by the President’s relatives:

*Under Aushev Ingushetia was turned into Aushetia. All key positions were occupied by Aushevs. In Karabulak, all city mayors were Aushevs. This happens when a person becomes president, his teip, which is otherwise dormant, would wake up and unite around him.*

Nurdin Kozdoev, Ingush historian

Aushev did promote his close relatives. He said “What can I do if Aushevs are educated, they were studying when others made money at seasonal jobs. But Aushevs is a big familia. He often trusted them not as relatives, but as specialists.” At the same time, take Gutseriev, he belonged to the Beshtoev familia. Gutserievs are a very small lineage - 10-15 households. But what has he done for them? He is one of the 30 richest men in the country. He could have given a million rubles to every household, buy land slots for everyone in one place and ensure their comfortable life. But he did not do that. Magomed-Sali Kotiev, member of national (“Diakeste”).

Idris Abadiev, the Ingush businessman and politician quoted earlier, who has a very strong “teipist consciousness” and invested much effort and money in organizing Evloev teip politically, explained with bitterness that although there were Evloevs in the government, they were Aushev team members, rather than Evloev teip members and were not supportive of or accountable to teip:

*In Aushev’s government there were Evloevs. The Minister of Employment was Evloev, deputy minister for social development. But any Evloev who is appointed by them, is not listening to Evloevs anymore, he becomes their man. Teip representation does not matter, there is president and everybody complies with what he says. This has destroyed the Ingush democracy; we have never had presidents or tsars.*

Idris Abadiev, Ingush businessman and politician, Evloev teip
Although some of my respondents, especially those very critical of Aushev emphasized the role of kinship in his government, the majority claimed that informal social institutions of teips or virds were not relevant in the process of Ingush state-building in 1992-2001. The main principle for recruiting people in the government and managerial positions at state enterprises was adherence to Aushev’s course, i.e. programmatic, meritocratic, in the President’s own understanding of the world – the person had to be effective, not corrupt and share the ideology of his team. According to my respondents-supporters of Aushev, the President did not preferentially treat his relatives; neither did he discriminate against them for being such. Thus, Aushevs were represented in state government structures, if they professionally fit the position, and he fired or fought with them when they did not:

There was no clanship in Aushev time. Of course the way to politics is not open to everyone. A milking lady cannot be a politician. Entire Ingushetia is covered with a net of kinship ties. Less than 70,000 people returned from the exile, roughly 30% of them children, 30% younger adults, 30% Elderly. Of these 30,000 younger adults a nation multiplied which now numbers half a million. Thus, most of us are relatives in some way. If a relative is educated, with a potential to growth, why not hire him? But when someone is appointing an idiot because he is a relative, this is clan stupidity. Keeping a vird or teip balance for us is not relevant. We are one nation and teip or vird balancing would get us back to the 19th century. The main criterion is professionalism. What if some teips do not have a person who could be a statesman? It’s not for everyone. Dagestan has such a system of balance since times immemorial. As a result they have divided into groups and fight with each other for power. Ingush society does not need a teip-vird-based political consolidation. Daud Garakoev, MP to Ingush Peoples Assembly, 3d Assembly. Leader of regional division of “Yabloko” party.

Our teips play a great consolidating role. Without them we would not have preserved our culture and traditions. There’s nothing wrong with that. It is bad if the teip system is used for political ends. Aushev had no teip-based approach to cadres. A wise leader should not use this structure in politics, but only for preserving traditions and culture. Ayup Gagiev, MP of Ingush Parliament, 3 Assembly 2003-2008. Head of group of advisors of the President of Republic Ingushetia 1995–2000, 2000-2002 deputy Minister of Justice of RI.

Mukhtar Buzurtanov, who has worked with every government (Aushev, Zyazikov and now Evkurov), thinks that in fact there were not many Aushevs in government and “Aushetia” is a term invented by “malicious gossipers” from the national movements:

“In opposition to Aushev were members of the national movement whom he did not invite to power, never supported them and kept them at a distance. These were evil tongues who called Ingushetia-Aushetia. There were 4-5 Aushevs at prominent positions in the republic, and he fired them just as often when they underperformed. Mukhtar Buzurtanov, deputy Minister of Internal Affairs, (1995-1997), deputy chair of the National Assembly 1999 -
One of the main political challengers of Aushev during his second term was his teip-member, Mukharbek Aushev, who was an MP of the Russian State Duma from Ingushetia. By 1996 the confrontation between two Aushevs became so prominent that it spilt into the media. In 1998 Mukharbek started to use dirty tricks and suggested that Ruslan Aushev was almost an accomplice to abductors of people and negotiated with them the exchanges of hostages (Serdalo December 8, 1998). Magomed-Sali Aushev, an MP of the Ingush parliament was one of his critics, and during several episodes of tensions between the parliament and the president, was taking the side of his opponents.

President Aushev very often dismissed ministers, heads of state-departments and governmental agencies. In 1992 he passed a decree forbidding to transfer civil servants, who were dismissed for bad performance or immoral behavior to other equal positions, which used to be a common practice in the Soviet times (Ingushetia 15 December 1993). Especially in 1993-1994 the Ministers were often replaced after just several months in the office. In 1995-1996 the situation somewhat stabilized, but firing people remained typical of Aushev’s style of government. Very often Aushev would fire a minister or medium level official and have central republican newspapers publish a decree stating that the person was resigned “for inadequate performance” (see eg. Serdalo 25 March 2000). Naturally by the end of his term Aushev had quite a few enemies in the republic. Frequent rotation of cadre was by some explained as Aushev’s attempts to break the old style of government and old networks of nepotism and corruption, but also to get rid of inefficient and unprofessional leaders. Others attributed the frequent reshuffle in government to the drastic character of the President. Appendix contains a list of government officials of top and medium level (but in charge of an institution/state department or region), compiled on the basis of the analysis of newspapers Serdalo and Ingushetia, decrees of President Aushev and articles quoting state officials in 1992-2001. Since some of the issues of both newspapers are missing from the libraries of St Petersburg, Moscow and Nazran, the list may be incomplete, but it contains most of the names with titles. Some of the officials stayed in the
office quite briefly, but for the purpose of this study it is important to register the fact that they were recruited in the elite. As has been stated in Chapter 4 the Ingush familias represent lineages or teips. Thus, analyzing family-names (and sometimes village of origin) one can establish kinship ties of the government officials with quite some certainty. The results of the analysis confirm that Aushev (both members of teip Aushev and Aushev familia) were somewhat over-represented in the official institutions in Ingushetia in 1992-2001.

Thus, there were 7 senior officials of Aushev familia, 9 of Aushev teip (7 Aushevs + 2 Toldievs) compared to 8 representatives of Evloev teip, 3 representatives of Ozdoev teip (Evloy and Ozdoy are the two largest teips in Ingushetia), 7 representatives of large Barkinkhoev and 5 of Gorokoy teip, the rest of the teips had three of less representatives.

Akhmed Malsagov, who acknowledged that President Aushev was not deprived of the “teipist consciousness”, said that at least three out of seven Aushevs were nonetheless replaced by the President during his two terms in the office.

There is no clan politics, this is a misperception. In this period, the main criterion for elite recruitment was dedication to Aushev’s vision of Ingush statehood, support of his policies... There was no clanship, but there was an element of kinship. There were Aushevs in the team, but importantly, if Aushev would perform badly or behave in an inadequate manner, Ruslan would punish him very strictly, there were many cases like that. For example, Bashir Aushev was the 1st Minister of Internal Affairs, but he was caught on a bribe and was fired and punished by Aushev. Akhmed Malsagov, Minister of Finances, Chair of Government 1997-2002.

Aushev’s team included quite a few non-Ingush (Russians and representatives of other non-Caucasian ethnic groups). For many years the Prime-Minister was an ethnic Russian from Voronezh, Boris Agapov, his friend from Moscow, who also fought in Afghanistan (since 1992 until today Ruslan Aushev Presides over the Society of Afghan war veterans). There were
several veterans of Afghan war of different nationalities in Aushev’s team, for example Ruslan Pliev, who used to be the head of government administration and later the chair of parliament and the Minister of Emergency situations (Kovalskaya 1996).

Interestingly, the Russian members of Aushev’s team did not differ in rhetoric or way of thinking from their Ingush colleagues. Agapov would refer to Ingush and Ingushetia as “our people”, “our republic”, would condemn Chechen war and the actions of the federal generals, moreover, he, rather than Ruslan Aushev would speak about “imperial ambitions” and the “Russian chauvinism” of the federal center (Kovalskaya: 1996). In other words, Russians, were part of Aushev’s team, sharing its ideology just as much as the Ingush.

This is how Agapov explained the frequent change of cadre during Aushev’s presidency:

Our main criterion for a leader is his professionalism. He has to be a good manager, to be able to organize work well. The important qualities of the leader should be indisputable honesty and patriotism. He has to have clean hands and clear soul and be devoted to his republic...he should remember that he is working not to promote himself, not for the sake of the material well-being of his family, but for his people and the republic. But if we see that a person is lacking in professionalism, or cannot organize work, or he is dishonest, or if he is not a patriot of his republic, than the President makes the decision to remove such a person from the office (Serdalo: 23 July 1996 #30).

In short, the main principle of Aushev’s elite formation was programmatic. As we have learnt from the interviews, Ingush and even representatives of ethnic groups dropped their teip and ethnic identities and became member of Aushev’s team. As Idris Abadiev regretted, Evloevs, once joining Aushev’s government were not accountable to their teip or lineage, but were part of the President’s crew. Kinship did matter to some extent, and President Aushev was not deprived of “teipist consciousness”, but, according to most of my respondents, even his critics, the President treated Aushevs in power equally.

Conclusion

This chapter analyzed the 1992-2001 state-building project in Ingushetia, which was an outcome of the Ingush national movement and the Ingush-Ossetian armed conflict of 1992. In this conflict
the Ingush had been defeated, which intensified their feeling of insecurity, stirred up memories of grievance and alienation within the Russian state. At the same time, ethnic conflict was conducive to internal consolidation, feeling of solidarity which provided the Ingush society with what Dankward Rustow called “a strong sense of prior community”, that “was taken for granted”; which political science usually takes as an important prerequisite for successful state-building (Rustow 1970:346). Unlike Chechens, Ingush did not suffer of “birth defects” of the political nation.

Ingushetia’s first President Ruslan Aushev managed to consolidate the post-conflict society by his resolute, yet non-confrontational style of leadership and his ability to defend the interests of the Ingush people in front of the federal center as well as to play an important role in the regional affairs. Remarkably, Aushev’s unprecedented ability to consolidate was not based on nationalism; quite on the contrary, his policy was that of ethnic inclusion and marginalization of nationalists.

The chapter analyzed the efforts of Aushev’s government to build republican statehood: economy and infrastructure (industry, agriculture, budget security, foreign investment), enforce law, provide for education and healthcare. Creativity and consistent effort to find ways out of a tremendously difficult situation helped the Ingush government to maintain the precarious stability, prevent the republican economy from a total collapse, Ingush society from criminalization, and give an impetus to the development of the Ingush educational system, healthcare and infrastructure. Large-scale construction carried out due to funds available from the profits of the off-shore Zone „Ingushetia“ was conducive to the positive feelings of hope and sense of protection by the Ingush population, who, as even harshest critics of Aushev admit „have accepted this government as their own“. Despite the criticism related to the effectiveness of the usage of profits from the off-shore zone, clearly never before or after Aushev’s presidency has Ingushetia seen so much of public construction and development in one decade. This was a radical difference from Chechnya, which in the same time moved towards total collapse.
The main issues of controversy and the central political tensions within the Ingush society in 1992-2001 were between Aushev’s vision of Ingushetia—modernizing, multi-ethnic, self-sufficient and open to neighboring nations and nationalists’vision of statehood—traditionalist, ethnocentric, isolationist towards neighbors. The main points of disagreement were ideological: ways of dealing with the consequences of the Ingush-Ossetian conflict armed conflict and Chechen Wars or economy which although produced discontent on behalf of the part of the population, never transformed into a real cleavage or produced organized opposition.

Finally the chapter analyzed the role of informal actors in the Ingush state-building of 1992-2001. It argued that similarly to Chechnya 1990s was the period of retro-fashion on teips and descent groups. Many Ingush teips familias reconstructed their genealogies, family histories, restored familial cemeteries, coordinated rituals, and generally “turned to their roots”. Descent groups became somewhat more integrated and better organized in respect of tradition and ritual, however, were unable to find their niche in the modern life of the society, solve any social problems, which they aimed to target like low morality, alcohol consumption and insufficient state capacity to provide care to the needy and ill. The attempts of some teips to consolidate politically and defend their interests through elections failed dramatically. This chapter has shown that the Ingush teip and even familia had disintegrated, they are not political units, and exist at the level of loose identity which had a different relevance to different people, depending on their personal outlook. The Imperial and then Soviet state managed to contain teip to the domains of ritual and tradition, and it remained as such, playing insignificant role even in the life of individual families.

Religion was an important factor of the 1992-2001 Ingush state-building. On the one hand, the Aushev’s government supported Islamic revival. On the other hand, the appearance of fundamentalism created tensions in the republic. Aushev managed to control and marginalize fundamentalist groups and did not give many reasons for their critique.
Religion did not play any role in Aushev elite formation, the main principle for recruitment of cadres was professionalism and ideology – shared vision of republican statehood. When joining the government, Ingush and representatives of non-Vajnakh ethnic groups dropped their teip and ethnic identities and became members of Aushev’s team. As Idris Abadiev regretted, his teipsmen -Evloevs – when members of the Aushev’s government were not interested in their teip or lineage, but were part of the Aushev’s crew. Kinship did matter, and President Aushev was not deprived of “teipist consciousness”, moreover, Aushevs were overrepresented in key positions at state institutions. At the same time according to most of my respondents, even his critics, Aushevs in power were treated equally strictly if they underperformed. The fact that President Aushev was able to bring so many of members of his familia into the republican elite should be explained by the fact that no system of political checks and balances existed in the republic. According to the Constitution of the Ingush Republic, the parliament had very limited leverage over cadre policy, while opposition was not organized.

The Ingush government in 1992-2001 set the goal of creating Weberian rational –legal bureaucracy in Ingushetia, their success in this endeavor was very modest, but there is a full consensus among all of my respondents that at least among top-level officials there was little corruption and Ledeneva’s mechanisms of mutual covering up and of economy of favors were existent, but marginal.

Using Migdal’s ideal-type classification of interrelations between the state and social organizations, Aushev’s government followed the “accommodation” pattern, towards traditional informal actors, like descent groups and Islamic brotherhoods (Migdal 1988:25). The autonomy of the state with respect to social structure in Aushev’s presidency was significant, and accommodation happened outside the political system. Ingush government did not seek participation or legitimization of informal actors, as did Dudaev, but allowed them to peacefully coexist and live their own lives. Pre-existing informal patterns of social integration, in turn, had internalized the idea of the “autonomy of the state”, and did not press for greater participation of
informal actors in politics. Nationalists being discredited by the Ingush-Ossetian conflict did not
dare to challenge Aushev’s regime. Aushev’s policy, in his turn, was marginalization of
ideological partners, which, however, did not involve persecution or repression.

Aushev’s regime was consolidated, both because it had no organized challengers and because the
President enjoyed large support of the population, which was reflected in the results of the
elections. Lack of organized opposition, parliament with very limited credentials to influence the
governmental appointments, were conducive to nepotism and Aushev government had a much
higher percent of relatives or representatives of kin groups in his elite compared to Chechnya
under Dudaev or under Maskhado.

Table 7.3. below indicates the prominence of the five dominant patterns of integration in the
Ingush political elite of 1992-2001. It shows that the most prominent pattern of integration was
ideology; descent and kinship had significant presence, the role of religion was marginal and of
territory-nil.

“The clan politics” argument does not apply to Ingushetia during the Presidency of Aushev in 1992-2001. The main criteria for elite recruitment were shared values and efficiency, in the conditions of low risk of physical elimination for government leaders or of their prosecution of illegal economic activity, President Aushev could afford not to have a tightly knit team political team, based on strong ties. Relatives in his teams were dismissed from the offices as often as non-kin. The main political division in the process of state-building was ideological (between Aushev’s vision of Ingush-state-building and that of the nationalists); descent groups played no organized role in politics, although serious attempts to use them as a resource had been undertaken by activists of some teips.

Modern secular national consolidation and a feeling of identity protection offered by Aushev government are acknowledged even by the critics of Aushev. At the same time Ingush state-building of 1991-2002 did not result in an institutionalization of the system, but produced a highly personalized paternalistic presidential political regime strongly dependent on the consolidating capacities of the President Aushev.

Before finalizing the findings, I will briefly sketch out two extreme cases of personalistic regimes in Ingushetia and Chechnya. Both of these regimes are normally referred to as ‘clan-based’ or ‘teip-based’ by many Russian analysts and politicians. These are Ingushetia under
President Zyazikov (2002-2008) and Chechnya under Kadyrovs (2003- current). I do not dedicate separate chapters to these case studies and do not analyze state-building efforts in these periods, because there was no political autonomy or authentic, independent political process of any kind in either case. Both leaders were installed by the federal center and kept there by force due to the support of Moscow. Moreover, they were both guaranteed impunity for crimes committed in office. One of these regimes was egregiously corrupt and the other egregiously violent. Both created highly personalistic polities based on full loyalty to the leader. One (Ingush) was totally inefficient; the other (Chechen) is successful in maintaining order running state services.

8.1. Ingushetia under Murat Zyazikov: 2002-2008
In May 2002 Murat Zyazikov, an FSB general and a protégé of Vladimir Putin, was elected the President of Ingushetia (with numerous violations registered during elections). With Zyazikov’s arrival the situation changed dramatically: if President Aushev managed to contain the actions of federal forces to Chechnya, President Zyazikov was installed to ensure freedom of action for the federal security services in Ingushetia. Mop-up operations started, which involved grave human rights violations, such as enforced disappearances and summary executions. They were carried out first in Chechen refugee camps, but then increasingly throughout the republic. President Zyazikov did not try to control security services on his territory and closed eyes on mass human rights abuses. In return he was given full freedom and impunity in his political and economic affairs. In June 2005 he was appointed the President of Ingushetia for another five years (by that time the regional elections have been abolished in Russia).

Zyazikov’s government was unprecedentedly corrupt, dramatically ineffective and violent. In six years in office Ingushetia turned from a peaceful republic into a full-fledged conflict zone, with armed insurgency more active than in Chechnya, with collapsed economy, high poverty rates,
Zyazikov was notorious for his fictitious reports to the federal center about the successes in the development of Ingushetia. Thus, in 2007 at the 6th Investment Forum in Sochi, Zyazikov declared to journalists: “In the last three years we have built 3 million 233 thousand square meters of residential housing. For a small republic, this is a huge figure”. This figure was, indeed, incredible since the entire residential fund of Ingushetia before Zyazikov was not more that 3 million. Zyazikov claimed to have almost doubled the republican residential fund, while residents of Ingushetia could hardly find any newly constructed buildings apart from private houses around them (Velikovsky: September 24 2009).

Zyazikov’s report to President Putin which was broadcast on central TV channels and where he claimed to have launched 80 industrial enterprises in the republic, produced a furious reaction in Ingushetia, which is too small for people not to notice any of these enterprises (Velikovsky, Russkij Reporter: 24.09.09). During the first two years of Zyazikov’s rule (2002-2003) the gross regional product declined by 25%, unemployment and poverty grew from 30% to 55% and from 50% to 80% accordingly. Corruption went up dramatically (Nutwood, Wild West January 30 2009).

90 On August 31, 2008 when flying from Moscow to Ingushetia President Zyazikov happened to be on the same plane with his opponent, the owner of oppositionist web-site Ingushetia.ru, Magomed Evloev. Zyazikov made a phone call, and when the plane landed, Minister of Internal Affairs Musa Medov met him at the ladder of plane. Medov picked up Zyazikov and left, with gesture ordering his men to get into the plane. They got on board and took away Magomed Evloev. In 30 minutes Magomed was dumped at the Republican hospital in Nazran with a bullet in his temple. The insolent murder of the famous oppositionist was the beginning of the end, in two months President Medvedev signed the resignation of Murat Zyazikov, which caused hilarious joy in Ingushetia, with people dancing in the streets and security servicemen shooting in the air.
After Zyazikov was removed the auditors of the Counting Chamber of the Russian Federation (Счетная палата РФ) carried out a budget inspection of Ingushetia in 2008 and revealed financial violations amounting to 1,74 billion rubles (13,4% of consolidated budget of the republic). The report lists specific violations: for example the fact that a private firm OOO “Alisa” received 73, 5 million rubles of government funding as a payment for the construction of Tuberculosis prophylactic centre, which had not been built. The Ministry of Construction of the Republic with other state departments illegally transferred 139 mln rubles as a 100% pre-payment for the construction of schools, polyclinics, development of industrial infrastructure of various regions of Ingushetia, as a result huge amount of money had been accumulated at the bank accounts of private firms. The report noted a number of minor violations, like tremendous overspending on “souvenirs” by the Presidential administration. The report also noted that the government of Ingushetia completely failed to implement the special federal programs for resettlement of families from the areas with high landslide risk or to construct rehabilitation center for handicapped children and AIDS prophylactic center (Novikova, Dachaeva, Gazeta: May 21 2009). After Zyazikov was removed from his post, the Prosecutor’s Office of the Ingush Republic investigated 22 cases against officials into corruption-related crimes.

Today Zyazikov rules Ingushetia. Who is behind him? His relatives, friends, close people. In my understanding, what Zyazikov presents as his team is in fact his clan, his associates, this is a union of racketeers of the people, who are stealing from its people in the background of complete lawlessness and impunity. At the same time one family cannot take over the republic. There will never be one family clan in power. This is an interest group, united by thief’s interests. Azamat Nalgiev, MP of Ingush People’s Assembly of the 1st calling.

Kinship element in Zyazikov’s elite was modest, but had a prominent function. Zyazikov’s most entrusted person was his cousin, Rustanbek Zyazikov, who occupied an insignificant position of the head of his personal guard, but became the most powerful man in Ingushetia. All financial deals and agreements were negotiated and carried out by Rustanbek. It is well known that in
order to get any governmental position one had to pay a bribe, which was arranged through Rustanbek.

Rashid Zyazikov, another cousin of the president was implicated in lobbying business interests of certain firms for getting no-interest credits, budget loans as well as permissions for construction of other objects. The due permissions for using budget funds were usually signed by the Minister of Finances, Aset Ustilgova. For arranging permissions, Rashid Zyazikov allegedly got 10% personal “otkat” (graft). Aset Ustilgova is thought to be one of the key players in financial machinations in the Republic. Her brother was the director of the spirit factory in Karabulak, and according to Ingushetia.org he received budgetary inflows for purchase of raw materials on inflated prices. According to various sources, Ustilgova personally collected bribes (always emphasizing that most of it “goes to the boss”- i.e. Murat Zyazikov), and carried out tenders for construction of budget-sponsored objects and other machinations through her deputy minister Alikhan Gandaloev (Ingushetia org. November 12 2008, Commersant: November 14 2008).

Alikhan Dudarov, the head of Administration of President of Ingushetia and Boris Kamurzoev, Minister of Healthcare (Dudarov’s brother-in-law) were implicated in major theft in the sphere of healthcare. The Minister of Internal Affairs Musa Medov is widely known to be responsible for large scale corruption related to “the emergency situation payments” to policemen. After the attack on Ingushetia by armed insurgents in June 2004\(^91\), Ingush policemen started to en masse leave their jobs, feeling that the situation developed towards an armed civil conflict. Then the federal center decided to pay Ingush policemen “emergency money”, additions to salaries which they were supposed to get since 1992 for working in the zone of “emergency situation” (Ingush-Ossetian conflict). Those policemen, who worked for several years, were supposed to get quite significant sums, sometimes sufficient for buying a house. It is widely known in the republic that “emergency money” could be received for 40-50% \textit{otkat} (graft) to the Ministry of Internal

\(^91\) when 98 policemen and security servicemen were summarily executed within four and a half hours
Affairs, in addition one had to pay for the court decision to judges who confirmed the fact of employment in police at the time. During my fieldwork I have met several people who have not worked a single day in the police but got this money, having paid due bribes. Machinations with the “emergency money” involved Ministry of Internal Affairs, courts and lawyers (who served as ‘postmen’ preparing documents and delivering bribes to judges). My acquaintance, Musa, a defense lawyer, put it very frankly “May be this is the only chance in my lifetime to make such money, I cannot miss it.” Musa bought a nice luxurious flat in the center of the new Ingush capital Magas after several months of working on “emergency” cases.

The city major of Nazran, Magomed Tsetchoev, reportedly sold around 15,000 land slots around Nazran, 5-6,000 euro each. This land was supposed to be allocated for private housing for free. Several of my acquaintances bought such land slots. In short, each member of Zyazikov’s team was “doing business” in his own office, sharing profits with Murat Zyazikov and helping each other in covering up the machinations, and in other issues, in Ledeneva’s terms, “exchanging favors”. For example, Nazran city mayor Tsetchoev “helped” President Zyazikov to disperse protest rallies in Nazran, while Minister of Internal Affairs Medov “helped” him to get rid of his opponent, owner of Ingushetia.ru Magomed Evloev. Zyazikov, in his turn, “helped” to cover them up. All were connected by krugovaya poruka - mutual covering up and responsibility for highly risky financial machinations.

The closest circle of Murat Zyazikov – Aset Ustilgova (Minister of Finances), Musa Medov (Minister of Internal Affairs), Ibrahim Malsagov (Prime-Minister), Akhmed Tsetchoev (major of Nazran) were not his relatives and not of the same teip/familia/ with him. They were united by common economic interest and relations of trust and mutual dependence based on detailed knowledge of each others financial crimes. Zyazikov’s cousins, Rashid and Rustanbek (both matrilineal cousins), were his only relatives in the government. Several other relatives of Zyazikov occupied some less prominent positions, not playing any significant role:
Zyazikov hired those who paid bribes. First and foremost you needed resources to get into the government. Then he took toadies, those who praised him, also relatives, on his mother’s and wife’s side. His wife is Chakhkieva, one of her sisters, a former school teacher, became the head of the state archive, her brother, a complete dummy, was made the head of the Licensing Committee, her father was an MP. There were not too many relatives, you just spot relatives right away and focus on them in such situations. Nurdin Kodzoev, Ingush historian

After Zyazikov’s resignation, ingushetia.org news portal published a list of “Zyazikov’s team” members, whom they considered his close circle, and who, in the opinion of the portal, participated in plundering the republic, ensuring impunity and granting much political support to Murat Zyazikov (see appendix). This list is a wonderful illustration how even in a truly personalistic, “clannish” regime; the overwhelming majority of members of the inner circle were not relatives. This list of 46 close associates shows that there were only two Zyazikov’s “teip members”92 in the political elite, five representatives of the largest Evloev teip, and the rest of the teips and lineages were spread quite evenly, although Ozdoevs, who were as large of a teip as Evloevs, is slightly underrepresented. There are two Russians in the list- Yuri Turygin, the Prosecutor of Ingushetia and Mikhail Zadvornov, the Chair of the Supreme Court. Turygin, whom I know personally, was among the most loyal Zyazikov’s supporters and was eagerly covering the grand financial machinations and crimes committed by Zyazikov and others. He was quite shamelessly lying on TV loosing all respect in the eyes of the population in order to defend Zyazikov and his team. Once Zyazikov was replaced and the new president Yunus-Bek Evkurov started an anti-corruption campaign, Turygin eagerly joined his efforts of revealing financial fraud of his former comrades.

In short, Zyazikov’s government, which was the most personalistic and ineffective in the recent history of Ingushetia, was a trust group, tied up with common economic interests and high risk associated with large-scale illegal economic activity. This group had a minor kinship element, which was not teip-or-descent based, but included members of President Zyazikov immediate family (matrilineal cousins, since Zyazikov has no brothers), but mostly consisted of large

92 Zyazikov grew up in the family of his mother and bares the name of his matrilineal kin. His actual teip members (Borovs) are not at all represented in the ruling elite
groups of unrelated people. Nonetheless, compared to Aushev’s presidency, when the percentage of teip members was much larger, the strength of ties was incomparably higher in Zyazikov’s period. He has never fired a single of his close allies for underperformance and the rotation of cadre was very low. Lack of elections, lack of any system of checks and balances, virtually no political autonomy from the federal center, dependent courts and ineffective prosecution in Ingushetia of 2002-2008 created a predatory system, where people who got access to channels of public good redistribution extracted resources for their own benefit and that of their close kin. Thus, even an extreme case of paternalistic, predatory regime, government had nothing to do with clan or descent group, which persisted from pre-modernity to modern times. Even kinship was marginal in the making of the tightly integrated elite. The main principle of elite formation was common economic interest, shared risk of illegal economic activity and mutual covering-up.

8.2. Chechnya under Kadyrovs: 2003 – current

The second Chechen war broke out in 1999, by 2003 the federal forces had gained control over most of Chechen territory, which was followed by a policy of Chechenization, whereby the federal troops mostly withdrew to barracks, and pro-federal Chechen-manned paramilitary groups carried out operations against combatants. Chechenization also entailed creation of republican institutions in a series of staged elections: referendum for the Constitution of the Chechen Republic, which placed Chechnya as part of the Russian Federation, Elections of the President and the Parliament of the Chechen Republic.

The largest pro-federal military group, manned by ethnic Chechens was the so-called Security Service (Sluzba Bezopasnosti) of Akhmad Kadyrov (“SB”), commonly known as “kadyrovtsy”. Initially created as personal security guard of the Moscow-appointed head of Chechen administration Akhmad Kadyrov, SB expanded into a powerful paramilitary formation which in the lifetime of Kadyrov-Senior largely remained his private army. In 2000-2004 it was partly legalized as units of patrol service and extra departmental guard of the Ministry of Internal
Affairs of the Russian Federation, which created legal basis for Moscow to finance them and supply them with arms. The group was commanded by Akhmad Kadyrov’s son-Ramzan (born in 1976).

Initially SB consisted of relatives and co-villages of Kadyrov and was formed on the basis of personal loyalty. Soon former fighters were “legalized” as part of the group, as a result of informal amnesty under guarantees of Kadyrov senior and then junior. Their security - both from the guerilla fighters’ reprisals and from prosecution by federal forces - depended on Kadyrov’s personal protectionism.

Along with Kadyrov's relatives, co-villages and former rebels the Security Service en masse recruited young men who had previously not been involved in the conflict. In the conditions of mass unemployment for many of them the Security Service was the only source of stable income. Being employed by pro-federal security services they became automatically involved in armed confrontation and thus became personally dependent on Kadyrov's group.

After Akhmad Kadyrov was killed in a bomb blast on May 9 2004 at the Dynamo stadium in Grozny, the SB was formally liquidated, but Ramzan Kadyrov was appointed vice-prime minister for the security bloc. The de facto existing SB received additional financial support and the possibility to expand. In 2004 the Second regiment of patrol service PPS-2 named after Akhmad Kadyrov was created consisting of 1,125 men as well as the so-called Oil Regiment numbering 1,5- 2000 men, part of the extra-departmental guard of the republican Ministry of Internal Affairs. They were manned by kadyrovtsy, who thus became legalized. In the process of reorganization of the existing structure Ramzan Kadyrov continued to actively recruit new people and set up his military units for an increasing number of towns and villages, gradually overtaking the local police stations. Eventually the former “SB” which numbered according to various estimates 4-12, 000 (the latter is probably an overestimate) of well armed and well trained people was fully legalized as part of Ministry of Internal Affairs of the Russian Federation. In 2004 Ramzan Kadyrov was awarded the “Hero of Russia” and in 2007 as soon as
he turned 30 and became eligible for presidency, he was appointed by Vladimir Putin the President of Chechnya.

Movladi Baysarov’s group “Gorets” (Mountaineer) was created at the same time as SB, and was manned by residents of Pobedinskoje town where Movladi was from. The group numbered 200-400 men. Movladi was a close associate of Kadyrov-Senior. The group did not have any legal status, and except for several field commanders, his fighters were not officially employed by any power agency of the RF. Since they were not part of any legal structure and had no salary from the federal budget, they made their money themselves, i.e. via control of oil revenues on their territory. Baysarov group participated in military operations against the “terrorists” together with Russian federal servicemen and on their own. After the assassination of Akhmad Kadyrov, Movladi developed tense relations with his son Ramzan, who was much younger that Movladi, but behaved in an increasingly assertive way. Finally their tensions broke into open confrontation. Baysarov gave an interview to Ekho-Moskvy radio station where he called Kadyrov-Younger “a bandit”, after which his group was besieged in Pobedinskoje, and Movladi was shot dead by Chechen Special Forces in the center of Moscow on November 18, 2006.

The group of Magomed Kakiev, or the so-called “Gruppa Zapad” (Group “West”) includes 300-800 men, they control Staropromyslovsky district of Grozny, the area of Turbina, Nadterechny district and the territories adjacent to them. This group is legalized and is part of Chief Investigating Department (GRU) and the Russian Ministry of Interior and is fully loyal to Ramzan Kadyrov.

The group “East” (Gruppa Vostok) was led by Sulim Yamadaev, it used to control mountainous areas of Chechnya and is part of the Ministry of Defense Troops. The group enjoyed high political standing, Sulim’s brother Dzabrail was awarded the Hero of Russia (posthumously) and his brother Ruslan became the MP of the Russian State Duma. After Ramzan Kadyrov was appointed the President tensions emerged between Yamadaev brothers and him, which broke out into an open conflict by spring 2008. It started as a traffic quarrel over whose cortege gives the

---

93 Aslo known as “The 15th milk farm”, a settlement adjacent to Grozny
road to whom, and ended in shooting, when two Yamadaev officers were killed. Ramzan Kadyrov initiated a major smearing campaign against Yamadaev brothers, calling them war criminals and demanding criminal investigation of their activities. Eventually in September 2008, despite Yamadaev’s group prominent performance during Georgian-South Ossetian conflict on the Russian side, this Ministry of Defense battalion was dissolved without explanations and two days later on September 24, 2008, one the brothers - Ruslan Yamadaev - was shot dead in the centre of Moscow. Yamadaev men partly fled, partly joined Kadyrov forces. Sulim Yamadaev was shot dead by an assassin on March 29, 2009 in Dubai. The municipal police of Dubai requested extradition of Adam Delimnkahov, the MP of the Russian state Duma and cousin of Ramzan Kadyrov.

Thus, since his father’s death in 2004, Ramzan Kadyrov used the resources available to make his group the largest, the strongest, and legal and to dissolve all competing groupings with their leaders eliminated. Kadyrov built a sultanistic regime, has incorporated or destroyed all alternative centers of power, not only military, but political and public. Chechnya is a full dictatorship at the moment, with all power centers sub jected to the president. Many of the important positions are occupied by people of his inner circle: patrilineal/matrilineal relatives, co-villages, and friends. His closest friend and ally is his cousin, Adam Delimkhanov.

Kadyrov’s regime was a result of war victory against underground networks. His task was difficult: to defeat combatants in the hills and to take over power rivals on the pro-federal side. This was a task of super-high risks, which involved tremendous violence. In Chechnya with its tradition of blood feud, trust in the immediate circle – from cook, bodyguards to members of government was a matter of survival for him. It is not surprising therefore that he had to surround himself with the most trusted people:

*Kadyrov Senior became the head of the republic. He had to rely on someone. That was a troubled time, many had their minds dim, so he relied on his kin ties.* Vakha Garsaev, Chechen ethnologist
Akhmad Kadyrov relied on his son Ramzan, who adored him as God. The team which Akhmad Kadyrov started to build up was then densely packed with relatives and co-villages, friends, who were too interconnected with kinship and other ties to betray him. Ramzan was responsible for his army. He attracted them with money, weapon, cars, and protection from the “federals”. There was no hint of accommodation, so typical of Maskhadov style.

*Maskhadov was not using kinship connections, his co-villages. Ramzan Kadyrov has learnt from his mistakes. He had to suppress groupings. He adopted a style of government opposite to Maskhadov’s. At first he was buying people, knowing their last for money, for power. He was buying clergy and civil servants. He is buying his relatives, too. Said-Magomed Khasiev, Chechen ethnologist*

Ramzan also tied people with blood. Usually when his men caught combatants they would keep them in their secret prison, torture them, kill some of them in front of the others and this way intimidate the rest, and then offer them to change sides and work for Kadyrov. It was a choice between life and death, so most would swap sides. Soon such a new recruit would be sent to the village where he previously fought as the head of Kadyrov’s service with the task to eliminate his remaining comrades. Thus, the new arrival would soon be “tied with blood” to his new group.

Many experts and my contacts among former combatants claim that a large part of Kadyrov’s army represent more of a threat than of protection to him, and the moment he looses the support of the federal center they will eliminate him. In February 2008, two of my colleagues and I had a meeting with Kadyrov at his private residence in Gudermes. The meeting took place at night, and was more of a sorting out between Memorial and the Chechen President, but at the same time Kadyrov seemed to be very sincere about many things discussed. Thus, he repeatedly spoke about risks to his life, coming from the fighters and from the Russian security services. He recalled an episode when his father was still alive and when he seriously considered giving up such a risky endeavor:

*One day I told my father: Why are we doing it? Russians hate us, Chechens think we are traitors, cannot we get out of it? Then father said: Have you chickened out? Pick any university, I will buy you a ticket and send you there. I said “No, I am staying with you”. Since then he*
considered me not just his son, but his associate. Ramzan Kadyrov, President of the Chechen Republic (2007-)

He also described how after his father was killed he could not trust anyone and had to always be tough in front of his men and could share his problems only with his dog:

_I had to be strong. I could never show my hesitation or feelings to anyone. I had a dog there at the stables and in the evenings I would go to him and tell him all my troubles. He was a young healthy dog and in a few months he got ill. I sent him to Moscow, to Rostov, to all best vets in this country. They could do nothing, they could not diagnose anything. He died because I had poured too much of my grief on him._ Ramzan Kadyrov, President of Chechnya, 2007-

In these conditions of extreme risk and virtually “no one to trust” Kadyrov naturally built a network of most trusted people:

_If we can talk about clanship at all, than the most vivid clanship is displayed today. Today you can put your relatives, co-villages on different positions and call it a “team”. In the previous periods you could not do it. There were some elements, attempts of certain people to build certain groups around them, but it had never materialized. May be if we had clanship, we would have built a state. But the society was not prepared to voluntarily give rule to some clan._ Khussain Akhmadov, Chair of Parliament 1992-1993, Advisor to Mufti of Chechnya

_The people around him are not Benoj. These are Khosti-Yurt94 people, his co-villages. When a person comes to power he has to rely on someone, he is looking for faithful people. You rely on relatives because you know that they cannot get away from you. Others can run away with money, but relatives are tied up to you, they have nowhere to escape. So he is relying on those with whom he was growing up....XXL, head of a regional administration, Chechnya._

Ramzan Kadyrov did not ask the society for permission, he has established his power by force. He also tries to deliver and has turned out to be an efficient manager. At the moment the Chechen state functions more efficiently than ever in its recent history. There is a massive reconstruction going on. Since late 2006 Grozny, which laid in ruins, turned into probably the most posh-looking city of the North Caucasus, with very few traces of war left. He restores factories, schools, kindergartens, supports culture, sport, and youth entertainment, builds mosques, and restores _ziyards_ -sacred places of Chechen virds. The financial inflows in the Chechen republic have been unprecedented in the last three years. However, the financial schemes of reconstruction are completely non-transparent, and corruption is egregious. In the

94 Kadyrov’s native village
conditions of lack of any elections at any level, lack of any checks and balances of any kind, full impunity combined with high level of violence against political opponents, a regime emerged that could be hardly more personalized and more based on strong, organic ties (kinship, neighborhood, close friendship).

This thesis has analyzed five regimes. The case studies covered two republics, different periods in recent history, different programs, different ideological orientations and styles of government, and different levels of risks. The first two Chechen regimes were all based on weak ties. Ideology, programmatic consensus, and performance were the most important criteria of recruitment. In the government of Aushev the elite was somewhat more homogeneous, strong ties (especially based on kinship) played a somewhat larger role, but the functional logic of the government has always dominated over the personal relationships within the elite. The frequent turnover in governmental positions assured the openness of the elite. The Zyazikov and Kadyrov governmental elites, on the other end of the spectrum, were close-knit groups, defined by unconditional loyalty to the leader. Yet, the regime of Ramzan Kadyrov is heavily based on ascriptive ties, while in Zyazikov’ government the presence of kinship was very insignificant.

9. Conclusion
This dissertation has analyzed state-building and political integration in the two most troublesome Russian regions, Ingushetia and Chechnya, after the collapse of the USSR. The cases of Ingush and Chechen state-building offered a window into late polity-building processes in unevenly modernized societies: social contexts in which traditional identities and institutions constrain political actors and informal institutions and trust networks play a prominent role in politics.

One of the principle aims of this thesis was to provide a socio-anthropological analysis of informal patterns of social integration and to assess their role in political leadership. The thesis
adopted an interdisciplinary approach drawing on historical, anthropological, sociological, legal and political science data and literature.

My argument was constructed primarily in supplement and opposition to the literature on clan politics in the region. These clan politics writers claim that regime transition and state-building is shaped by and organized around clans - pre-existing informal identity organizations based on kinship (Collins 1996: 24, Schatz 2005, Sultan 2003). In clan based societies, according to Collins, formal institutions and elite decisions have limited power (Collins 1996). Maria Sultan claims that Chechen society is tribal and its integration into a modern Russian nation-state is essentially impossible (Sultan 2003). The eight chapters of this dissertation tried to refute such arguments both from bottom-up (starting from teips and working towards political systems) and from top down (analyzing state-building projects in 1999-2001 and the role of teips and other informal actors in the political process). I have also scrutinized elite choices in dealing with the informal actors and showed that elites of the two republics had multiple options in dealing with the social structures and identities, and those were more successful which reacted more adequately to their social setting.

I started the dissertation by analyzing how socio-political developments - repeated forced and voluntary resettlements, deportations, expropriation of land, destruction of traditional economic systems, and integration into the capitalist and then Soviet economies – have transformed teips and traditional political structures. The scrutiny of historical sources has demonstrated that already in the 18th century teips, as social organizations, were weakened due to population growth and migration from the mountains to the lowlands. In the 19th century teips were further dispersed as both Imam Shamil and the Imperial forces resettled large numbers of population. Moreover, the creation of Imamate, a theocratic state in Chechnya – produced social differentiation and ideological divisions within teips. The Imamate enforced Islamic government structures and law on the Chechen societies, marginalized traditional self-government institutions and contained the Vajnakh traditional structures to the domain of family matters.
While in the 18th century gaar (a branch of teip) were the principal socio-political units, by the end of the 19th even gaars decomposed further, into what the Russian administration called ‘dyms’ (2-3 generations households), which became the main units of economic production. The 1863-68s land reform made dym the main fiscal unit and this way strengthened individual households against the teip commune. After the end of the Caucasian War the political power in the region belonged to the Russian administration, which diminished the role of the traditional Chechen and Ingush institutions and customary law in the public sphere.

The first state which aimed to penetrate even the family structure, submerge all of the local competing power centers and to establish a monopoly over making of rules was the Bolshevik state. Early Soviet policies involved assertive affirmative programs that resulted in impressive development of Chechen and Ingush social-professional structure. They increased the level of literacy and education, changed employment patterns and promoted emancipation of women. Korenizatsiya created a demand for teachers, journalists, writers, historians, as well as for bureaucrats. The Chechens and the Ingush gravitated to those spheres. The rural, family-based economy changed, new patterns of social integration emerged and acquired increasing significance: workplace teams, studentship, professional unions, communist party and komsomol membership.

Institutionalization of ethnicity, ethnic competition which was a result of mass resettlement of Russian-speaking population into Chechen-Ingushetia during the years of deportation of Vajnakhs (1944-1957) enhanced group cohesion of Chechen and Ingush communities and weakened the significance of sub-ethnic divisions. Collectivization further destroyed the economic basis of Chechen and Ingush extended families. Even nuclear family household could no longer be the main source of income due to limits on private economic production - family members had to sell their labor to kolkhoz or join industrial enterprises. This development diversified the family employment patterns and accelerated erosion of strong extended family units embedded in common 2-3 generation economies. At the same time extended family
structures of Vajnakhs were not easy to eradicate. Moreover some managed to adapt the kolkhoz regime to their habitual ways of family-based economic activity.

The Stalinist deportation of the entire Chechen and Ingush people, their dispersion along vast territories of Kazakhstan and Kyrgyzia and the subsequent return from exile, during which settlement to mountainous areas and Prigorodny Region was restricted, were further blows to teip-structures. Therefore, at the end of my historical sections I concluded that according to historical sources and witness accounts extended families rather than teips were the main units of kinship in Ingushetia and Chechnya by 1991. Specificities of Vajnakh history, which involved frequent resettlements, changed patterns of employment, institutionalization of ethnicity and perpetual inter-ethnic competition made teip (clan) an irrelevant social institution. It lacked both political and economic power to reproduce and reinforce itself as a relevant socio-political organization. The historical chapters refute the argument of clan politics authors who claim that similarly to Central Asia clans survived in Chechnya and Ingushetia. Central Asians and Vajnakhs had in fact very different colonial and Soviet histories, different social structures and traditional forms of governance, which make mechanical cross-regional generalizations invalid.

My ethnographic findings – collected between 2003 and 2009 - summarized in chapter 4 confirm the conclusions of the historical chapters. The detailed analysis of informal social structures in this part of the thesis provides a link between macro and micro levels of social and political integration. Participant observation and interviews identified the role of five patterns of social integration: kinship, descent, territory, religion, and ideology. Coupled with personal networks of acquaintances, colleagues and friends these may be constitutive of a person’s “inner circle”, which she uses when necessary for getting employment or acquiring social goods. This chapter concluded that teip is not a relevant social organization of the contemporary Vajnakh societies. Mechanisms for maintaining cohesion of Vajnakh teip are lost. Teip remains a loose identity, to which different people attach different significance. Daily routines of Chechen and Ingush
individuals are to a greater extent shaped by close kin, religious groups and regional/village identities.

Case studies in chapters 5-7 analyzed the socio-political processes which gave birth to the specific state-building projects and/or determined their initial conditions. Autonomous statehood, in both republics, was a result of powerful secular nationalist movements. In a later phase in both cases it was contested by Islamist political actors (successfully marginalized by Aushev in Ingushetia in 1997, but overtaking Chechnya in 1998-1999) and by 2002 it was finally taken over by Russia-imposed indigenous politicians. The findings of these chapters further refute the clan politics argument.

The 1991-1994 Chechen case shows clearly that despite attempts to revive and politicize teips and traditional political structures (Mekhk-Khel), clans failed to play any significant role in the political process and rather passed as elements of retro-fashion. Dudaev was challenged by moderate national intellectuals and state-employed workers who wanted agreement with Russia and a functioning state. The fragmentation lines in 1991-1994 were highly ideological, the crisis between the legislative and the executive powers in fact compartmentalized the state institutions with the Constitutional Court remaining the only (not entirely) neutral mediator between them. The crisis was resolved by the President who suppressed the opposition and dissolved the disloyal institutions. The latter, fearful of blood feud consequences, did not resist. Chechen nationalist state-building project failed because of the government’s inability to maintain Mannian infrastructural power: to pay welfare and salaries, to support industry, education and healthcare, to enforce law, ensure functioning judicial system, to maintain residential infrastructure. State incapacity was crucial in determining people’s attitudes to the regime, not their teip or clan affiliation. Strong parliament and opposition were crucial in preventing nepotism and the dominance of affective ties in the government. As a result kinship, descent, religious or territorial attachments played a marginal role.
The failure of the 1997-1999 state-building project in Chechnya should be attributed to the incapacity of the Chechen government led by Maskhadov to subdue paramilitary and criminal groups, which challenged his power, squandered state property and paralyzed the republican oil industry - the main sector of economy. Inability to tame crime reduced the Mannian infrastructural power of the state to almost nil. In this case we observed compartmentalization of formal and informal subsystems within the polity (the state, foreign Islamists, local and regional Islamists, and criminal groups), each controlling part of a territory and its resources and each following its own specific logic of behavior. President Maskahdov tried to consolidate the situation by empowering and accommodating the leaders of the subsystems. This strategy brought temporary peace but eventually failed due to a fatal provocation of one of his challegers which ended in the second Russian invasion of Chechnya. Maskahdov’s governmental elite was not socially homogeneous, strong ties played an insignificant role. His elite was formed primarily on the basis of ideological and religious convictions and programmatic beliefs, although in the first period of the case, interestingly enough, the organizing logic was exactly to bring together different factions of the Chechen society in form of a grand coalition. The main cleavages between the government and the opposition were ideological-religious and had nothing to do with pre-existing identities, like kinship or teips.

The relative success of the 1992-2001 Ingush state-building was largely due to the ability of the Ingush government to start their project by immediately marginalizing the radical nationalist challengers in 1992, and to subsequently keep under control the Islamists and prevent informal groupings from stabilizing as political actors. Creativity and consistent effort to find ways out of a tremendously difficult situation helped the Ingush government to maintain the state’s infrastructural power. They prevented the republican economy from a collapse and the society from criminalization. Moreover the government managed to give an impetus to the development of the Ingush educational system, healthcare and economy. Although Aushev’s government had a significant presence of relatives and members of descent groups, “the clan politics” argument does
not apply to this regime either. The system was meritocratic, the main criteria for elite recruitment were efficiency and programmatic agreement, and kinsmen in power were treated as anybody else and dismissed when underperforming.

Chapter 8 analyzed Chechnya and Ingushetia under the personalistic regimes of Murat Zyazikov (2002-2008) and Akhmad and Ramzan Kadyrovs (2003-), which are usually referred to as clan- or teip based. As opposed to the previous cases these regimes were not engaged in proper state-building: both leaders were installed by the Kremlin and were fully dependent on the federal center, which provided them with financial, administrative and military resources. But these leaders had freedom in forming their elites and to a certain degree in choosing the style of governance. Both regimes produced highly personalistic elites based on strong ties, characterized by immense corruption and violence. The difference between them was that the government of Ramzan Kadyrov was embedded in ascriptive ties of kinship, descent, village affiliation, and Islamic tariqa, while Zyazikov’s elite had a very insignificant number of relatives (two cousins) and other ascriptive patterns of informal integration were also irrelevant. Zyazikov’s government was a trust group of unrelated people, tied up with common economic interests and knowledge of each other’s economic crimes. The analysis of his government suggests that not even the most predatory, personalistic governments need to be based on ascriptive ties of blood or territory. Trust can develop as a function of interdependence and common involvement in risky political projects.

The latter thesis is supported by evidence on corruption cases quoted in chapters 4, 5 and 8, which revealed the mechanisms of blat, krugovaya poruka (mutual covering) and corporatism, similar to the ones described by Alena Ledeva in her influential study on Russia’s economy of favours. The perpetrators of these crimes shared a whole array of identities—village, region, kin-based or corporate, confirming Charles Tilly’s claim that trust networks do not have to linked by kinship to maintain strong solidarity (Tilly 2005: 9).

The findings of this research suggest some generalizations:
1. Pre-existing patterns of social integration (clans, tariqas, virds) do not play a significant role in the process of state-building in Vajnakh societies. The political process is shaped by agency, integrated on the basis of ideology, program, religion or economic interest. Chechens and Ingush politics is not clan-based.

2. Various patterns of social integration can gain prominence in state-building and elite formation. The role and prominence of individual factors is the outcome of the socio-political environment, elite choices and the demands of the state-building project. The figure below illustrates the prominence of five main patterns of integration for all the five case studies:

Figure 9.1. The prominence of five main patterns of integration for all the five case studies

2. Chechnya 1997-1999

4. Ingushetia 2002-2009
3. The table below summarizes the nature of the regimes, the nature of ties within the governmental elites and the prominence of kinship in the elite (the qualitative judgments were made on the basis of the analyzed empirical material). This thesis defined strong ties in politics as an interrelation of trust which involves 1) informality and intimacy (mutual confounding in risks), 2) reciprocal services and 3) strong interdependence, when people set valued, consequential enterprises at risk to the malfeasance, mistakes or failures of others. Groups based on strong ties are tight and difficult to permeate. Weak ties are loose connections, which are predominantly formal, procedural and do not involve strong interdependence or mutual confounding in risks.

The analyzed cases suggest that, contrary to the popular perceptions, the strength of ties in the
government does not directly covary with the prominence of kinship and the prominence of
kinship/descent does not directly correlate with strong personalistic government.

Four internal constrains have an impact on the nature of ties within the government. The table
below indicates the prominence of these constraints in the five analyzed cases: where 1 -
*negligible; 2 - weak, 3 – significant, 4- prominent  5- very prominent*

In kinship rich societies, the stronger the system of checks and balances or the opposition, the
weaker the ties in the government. The table also demonstrates that the stronger the risks of
physical elimination or prosecution for large-scale illegal economic activity, the stronger the ties
in the government.

4. The model of elite composition and nature of ties within the government is the following:
State building has an impact on factors which shape the composition of the elite by dictating
certain criteria for their recruitment. Thus, a nationalist project of 1991-1994 Chechnya required
marginalization of strongly pro-Russian actors, while Islamist regime would not allow atheists in
the government. It also has an impact on the system of checks and balances (via constitutional
design and law) and on opposition (sultanistic and predatory states do not leave room for
opposition). The factors influencing the nature of ties within government include five patterns of
integration analyzed in this thesis (descent, kinship, territory, religion, ideology) together with
some other integrative pattern (acquaintances, colleagues, friends and professionals). The
prominence of each factor depends on elite choices and demands of the state-building project. The nature of ties depends on systemic constrains such as checks and balances and existence of opposition as well as on the political environment of risk. High risk of physical elimination or prosecution for economic crimes tends to strengthen the ties within the government. Elites in their turn can alter the systemic constraints and reduce or increase risks by their policies.

Figure 9.2. The model of elite composition and nature of ties within government in Vajnakh societies

5. Traditional patterns of integration (descent, tariqas, virds) are more likely to be accommodative/non-interfering/ or supportive of governments compared to patterns of integration based on ideology, territory or religion, which are more likely to be challenging. The table below shows the behavior of informal actors towards the government:

This can be explained by the fact that “traditional” Vajnakh institutions are usually consensus-oriented and contained to the area of private and family lives.

Based on the analyzed cases it seems that the key to successful state-building in Ingushetia and Chechnya is for regimes to develop an optimal policy towards such potential informal challengers, improving the quality of governance, effective system of checks and balances, working towards a transparent economy and meritocratic legal-procedual political system with rational bureaucracies. This thesis suggests that fragmented kinship-rich societies strong parliaments with credentials to control government appointments and plural political process are conducive to reduction of nepotism in the elite.

I find it likely that in the future we may observe new attempts at revival of traditional institutions of teips, Councils of Elders or Khels. These attempts will be, however, unsuccessful: teips as relevant social organizations ceased to exist long time ago.

The scholarship on allegedly clan-based societies should investigate social and political integration by combining historical, anthropological, and sociological and political science approaches. This strategy will allow to consider both macro- and micro-level social dynamics of descent and kinship and to draw meaningful cross-country comparative conclusions. I hope that my thesis has demonstrated the merits of such approaches.
